

Uthej Reddy Avula

Lead Java Developer

Phone: 210-660-8691

Email: uthej.avula03@gmail.com

LinkedIn: <https://www.linkedin.com/in/uthej-reddy-avula-6644031b7>

PROFESSIONAL SUMMARY

- Over 11+ years of IT experience in the field of **software design, software development and web-based applications**.
- Experienced in **Spring Framework** technologies such as **Spring Core, AOP, Web Service, MVC, Security and Cloud**.
- Very strong Business Modelling skills using **OOAD and UML**.
- Adept at designing and developing **Spring, MVC, Java/J2EE** based frameworks.
- Expertise in configuring the Spring Application Context with dependency injection and using **Spring Framework** that can integrate **Hibernate** and Web Services.
- Knowledge in implementing a **REST API/Microservice** using **Spring Boot**.
- Strong knowledge of Hibernate and in using Hibernate Connection Pooling and **Hibernate Caching**.
- Good experience in Spring modules like **Spring AOP** etc., Implementing Spring aspects for logging cross cutting concern.
- Expertise in application development using **Servlets, Spring, Hibernate, XML**.
- Proficient in developing web-based applications, and **client-server** distributed architecture applications in **Java/J2EE** technologies using Object Oriented Methodology.
- Good experience in **log4j** implementation to persist the data into log files and experience with **Maven** for the build and deployment of applications.
- Experience in **Spring's IOC, AOP, Spring MVC** and **spring's integration with Hibernate**.
- Solid backgrounds on web application servers **Apache Tomcat 8**.
- Experienced in the functional usage and deployment of applications in **Apache Tomcat**.
- Good Hands-on **Apache Kafka** for messaging processing.
- Experience in software development methodology like **Agile (Scrum) Model**.
- Competent in using various AWS such as **EC2, Lambda, RDS** as well as Docker containers.
- Expertise in writing web services using **REST API**.
- Experience in **Microservice architecture**, with **Spring Boot-based services** interacting through a combination of **REST** and leveraging **AWS** to build, test and deploy microservices.
- Experience in **Relational Database and NoSQL** including Accessed relational data in **MySQL with JDBC**. Stored and retrieved data from **MongoDB with Spring Data**.
- Experience of working in **Agile Methodology** involving design, development, documentation, testing and maintenance.
- Hands-on experience in **Maven Scripts** for Build activity, **Jenkins** for Integration and **Git** for version control.
- Excellent track record of leading **end to end implementation and integration projects** to successful completion under tight deadlines.
- Dynamic and dedicated **team player** with **strong interpersonal and communication skills**; capable of presenting high quality of work under pressure and fast paced environment.
- Intellectual capacity to **grasp new situations quickly** and **problem-solving skills**.

EDUCATION:

Bachelor of Computer Science from JNTUH, India – 2012.

CERTIFICATION:

AWS Developer - Associate certificate.

TECHNICAL SKILLS

Programming Languages	Java, J2EE, PL/SQL, C, C++.
JavaScript Frameworks	AngularJS, Node JS, jQuery, React JS.
Application/Web Servers	Apache Tomcat, WebLogic Server, IBM WebSphere, JBoss EAP, Glassfish
Databases	Oracle, SQL Developer, MySQL, IBM DB2, Mongo DB
IDE	Spring Tool Suite (STS), Ultra Edit, Sublime text, Notepad++, Brackets, Edit plus, Eclipse, IntelliJ, NetBeans.

Web Development	HTML, DHTML, HTML5, XHTML, CSS, JavaScript, Angular JS, Node JS, AJAX, JSON, Type Script.
Standards & Frameworks	Hibernate, Spring 4.x/2.5/3.1, Spring Batch, JDBC, JSP, JSF, Servlets, DOM, DOJO, RESTful, JUnit, Struts 1&2, Jasmine, Jersey, Postman, Restful web services, Log4j, SLF4J, Spring Boot, Micro Services.
Tools	MS Excel, MS PowerPoint, MS Word, MS SharePoint, TOAD, SOAP UI.
Build & Design Tools:	UML, Rational Rose, Maven, Ant, Jenkins, Gulp, Karma.
Version Control:	GitHub, SVN, CVS.
Platforms	Windows (98, XP, 7, 8, 10), UNIX, LINUX, CentOS.
Testing Tools:	Selenium, Cucumber, J Unit, Q Unit, Postman
Cloud Services	Microsoft Azure, Amazon cloud services.
Methodologies	Agile, Waterfall, Rup, Xtreme.

PROFESSIONAL EXPERIENCE

Client: HP, Houston, Tx.

May 2023 – Till Date

Role: Java Backend Developer

Responsibilities:

- Involved in various phases of the **Software Development Life Cycle (SDLC)** of the application like Requirement gathering, Design, Analysis, and Code development.
- Worked in **Agile framework** as an individual contributor Responsibilities include - Interaction with the Business team in story grooming, reviewing story/acceptance criteria.
- Used **Java8 features** like Streams and Lambda expressions and Maintained Interface compatibility and concurrency in the project using Java 8 new features like default, static methods, and Concurrency API.
- Used Java 8 Method References feature to point to methods by their names.
- Used Microservice architecture with **Spring Boot** based services interacting through a combination of **REST and Apache Kafka message brokers and worked with Kafka Cluster using Zookeeper.**
- Closely worked with the Kafka Admin team to set up Kafka cluster setup on the QA and Production environments.
- Converted a **Monolithic app to Microservices Architecture** using **Spring Boot 2.0** using a 12-factor app methodology. Deployed, Scaled, Configured, and wrote manifest files for various Microservices in the Open **shift/Kubernetes environment.**
- Generated Metrics with method-level granularity and Persistence using Spring AOP and Spring Actuator.
- Used REST and SOAP Web Services to acquire credit history information.
- Involved in consuming RESTful web services using **Angular JS** to render **JSON data.**
- Wrapper developed in Python for instantiating multi-threaded applications and running with other applications.
- Developed batch processing applications using spring batch deployed on **AWS.**
- Worked on AWS Elastic Load Balancing, created EC2 instances, and worked on autoscaling the instances.
- Used CFT templates for creating AWS stack, S3 buckets, Roles, and Policies.
- Worked on CHEF scripts for automation and bootstrapping of applications on **EC2 instances.**
- Rewrite existing applications and migrated applications and the to the AWS cloud as part of the modernization project.
- Worked on creation of custom Docker container images, tagging, pushing images, and integration of Spring boot.
- Created the Docker containers and Docker consoles for managing the application life cycle.
- Used **Maven** as build and dependency management tool for creating EAR, WAR, and JAR files to be deployed in application servers, Jenkins, and Jenkins Jobs.
- Designed and documented **CI/CD tools** configuration management.
- Developed crypto rest services using **NodeJS** and integrated services.
- Developed web applications running on NodeJS using the Express framework, **Vue.js, and Backbone.js with Mustache.js** for front-end MVC/templating.
- Developed dynamic responsive Web Application by integrating Angular with Bootstrap which is further integrated with Web Services and Vue.js.
- Implemented the function to send and receive **AMQP messages on RabbitMQ** synchronously and asynchronously and send JMS messages to Apache ActiveMQ on the edge device.

- Used GIT as source code collaborator and **GitHub** for maintaining code and documentation.
- Migrated the Application from Spring MVC to Spring Boot.
- Developed Microservices using Spring Boot, Spring Cloud with Eureka to create discovery Server, clients, and integrated Apache Kafka as a message broker
- Experience in migrating monolithic application to microservices and interconnect the services
- Developed Spring boot application with microservice and deployed it into AWS.
- Experience in developing scalable solutions using NoSQL databases CASSANDRA, MongoDB, and DynamoDB.
- Used **NOSQL database Mongo DB** to store data of reporting Application which is of unstructured data.
- Involved in capacity planning and requirements gathering for multi-data centre Cassandra cluster
- Used MongoDB document-oriented database to store data.
- Used Maven to build and generate code analysis reports and **JENKINS for CI/CD**.
- Implement a production-ready, load balanced, available, and fault tolerant Kubernetes infrastructure.
- Worked with containerization tools, can implement the transition to Docker and develop distributed cloud systems using Kubernetes and Helm package manager for Kubernetes.
- Migrate Data from Elasticsearch-1.4.3 Cluster to Elasticsearch-5.6.4 using Logstash, and Kafka for all environments.
- Elasticsearch and Logstash performance and configuration tuning.
- Developed and deployed UI layer using **JSP, XML, JavaScript, HTML5, Ajax, jQuery, React JS and CSS3**.
- Used Spring Framework for **DI/IOC** and ORM components to support the Hibernate tool.
- Used Spring DAO for developing the data access layer.
- Integrated Hibernate 4.1 along with **Spring Data Redis** and used annotations for mapping ORM classes to DB.
- Developed Hibernate mapping file and the HQL queries for retrieving data from the Oracle database.
- Involved in Configuring web.xml and Spring-config.xml according to the Spring framework.
- Developed application based on the **MVC architecture** using **Spring MVC** to define Dispatcher Servlet, Controller, model, and View Resolver.
- Used Core Java classes to implement business logic.
- Responsible for installation, configuration, and administration of **Red Hat Linux, and Solaris systems**.
- Experience with Jumpstart & Kickstart Installations on **Solaris & Linux**
- Responsible for configuring, integrating, and maintaining all Development, QA, Staging and Production **PostgreSQL databases** within the organization.
- Used Maven to build war and ear files to deploy on JBoss Application Server 7.
- Monitored and fixed the error logs using Log4J, and configured **log4j.xml**.
- Followed **Test Driven Development (TDD)** and wrote server-side test cases using **JUnit 4.12**.
- Implemented agile development process on Software Development Life Cycle.
- Participated in Docker and AWS workshops to gain experience with emerging technologies.
- Actively participated in the daily SCRUM meetings to produce quality deliverables within time.

Environment: Java 1.8,11, Design Patterns, Servlet, JSP, Spring MVC 3.2, Spring Boot, hibernate 4.1, Web services - SOAP & Restful, WSDL, Oracle 11g, Maven, JBoss 7, EJB 3.0, JMS, XML, SVN, Log4J, Eclipse 4.0, HTML5, JavaScript, AJAX, jQuery, React JS, JUnit 4.12, Agile Methodology, SCRUM.

Client: USAA, San Antonio, TX.

Mar 2021 – Apr 2023

Role: Java Backend Developer

Responsibilities:

- **Used Agile (SCRUM)** methodologies for the Software Development Lifecycle of a dynamic J2EE project.
- Involved in **front-end designing** using **HTML5, CSS, AngularJS, JSF, Ajax**, and tag libraries.
- Developed **prototypes** and **project layout skeletons** using **jQuery, HTML5, and CSS3**.
- Created **RESTful API services** using **NodeJS**, consumed by various layers of application.
- Implemented and designed **Microservices** in **Spring Boot** for a financial services platform and used **AngularJS** to build customer forms connected to the backend.
- Leveraged **Spring Framework** with **Angular 7, HTML, CSS, NodeJS** to construct the dynamic web pages (presentation layer) of the application.

- Developed UI components using asynchronous **AJAX**, **jQuery**, and **AngularJS** to improve customer experience.
- Contributed to the development of enterprise applications using **Java/J2EE**, **Spring Boot**, **Hibernate**, **JPA**, **AngularJS**, **NodeJS**, **HTML**, and **CSS**.
- Worked in **ReactJS** on components, forms, events, keys, routing, and animations.
- Developed multiple enterprise applications using **Hibernate**, **Spring IOC**, **Spring MVC**, **Spring Boot**, **Spring JDBC**, **Spring Annotations**, **Spring AOP**, **Spring Integration**, and **RESTful web services**.
- Implemented **authentication and authorization** for the application using **Spring Security** and **OAuth2**, and integrated **multi-factor authentication (MFA)** for enhanced security.
- Designed and implemented **RESTful web services** that return both **XML** and **JSON** files for tasks, using **Jersey** for JAX-RS implementation, enabling both web and mobile app interactions.
- Integrated **Microservices** into existing system architecture, developed business components, and exposed **RESTful service endpoints** using **Spring Boot**.
- Utilized core Java concepts like **Multithreading**, **Exception Handling**, and **Collections** for class development.
- Defined **Hibernate Named Queries** for batch processing and **Criteria Queries** for Microservices.
- Implemented **Batch jobs** using **Spring Batch** to ensure data integrity and consistency.
- Deployed and tested applications on **WebSphere Application Server**.
- Used **Maven** for build and dependency management, including dependencies like **Apache POI**, **TestNG**, and **Maven Plugin API**.
- Built and deployed projects using **Jenkins**, automating build and deployment scripts with **Batch scripting**.
- Worked with **Docker** containers, leveraging **Linux containers** and **AMIs** to create Docker images/containers, and deployed with **Kubernetes** and **OpenShift**.
- Set up **Jenkins Master** and added plugins and slaves to support scalability and agile workflows.
- Automated builds and deployments across **QA**, **UAT**, **Integration**, and **Production environments** using **Jenkins**.
- Developed **new libraries** with **Microservices architecture** using **REST APIs**, **Spring Boot**, and **Pivotal Cloud Foundry (PCF)**.
- Deployed Dockerized **Spring Boot** applications intended to run locally using **Pivotal Cloud Foundry (PCF)**.

Environment: Java 7, J2EE, HTML5, CSS3, JavaScript, jQuery, AngularJS 4, Node JS, React JS, JSP, Spring IOC, Spring MVC, Spring Boot, Spring Batch, Spring Security, Spring Data, Hibernate, SOAP, RESTful, Microservice Architecture, XML, PCF, CI/CD Jenkins, Maven, WebSphere Application Server, IntelliJ, Junit, JMS, Jenkins, JIRA, log4j, GIT.

Client: Elevance Health, Indianapolis, IN.

Jan 2019 – Feb 2021

Role: Java Backend Developer

Responsibilities:

- **Application enhancement and maintenance** using **Java 8** with **Spring MVC framework** and **JDBC** at the database layer.
- Designed backend solutions using **Java 8** and **REST API architecture**.
- Developed **Web Java/J2EE applications** (JSP, EJB) using **Struts**, **Tomcat**, and **Xerces** for **Sybase (ASE 12)** with **JBuilder**.
- Prepared **Java/J2EE development structure** for **Eclipse**, **Maven**, and **Jetty**.
- Developed **Java Server Pages (JSP)** and **Enterprise Java Beans (EJB)** for the backend using **Spring MVC Model-View-Controller** architecture. Followed **OOAD principles** for component design.
- Responsible for writing **J2EE-compliant Java code** for application development involving **JSP**, **Servlets**, **JDBC**, **XML**, **EJB**, etc.
- Created new interfaces using **Java**, **Spring MVC**, and **Hibernate** based on provided requirements, such as **XSD/DDF**.
- Developed **cross-platform architecture** using **Java**, **Elasticsearch**, **Spring Core/MVC**, **Hibernate**, and **ActiveMQ** in **Eclipse IDE** and **Spring Boot**.
- Worked on various **Spring modules** (Spring MVC, DAO, ORM, IOC) along with **Hibernate** as the ORM tool for persistence layer and POJO mapping.
- Developed **Filter Views** and backend components using **Spring MVC**, **iBatis**, **JSTL**, **Dojo**, **jQuery**, and **JSTL**.
- Implemented **ORM** for Java class-to-database table mapping using **Hibernate** and **iBatis**.
- Developed interactive UI components for front-end users using **HTML5**, **CSS3**, **React.js**, **XML**, and **JavaScript**, with **AJAX**, **EXT JS**, and **Dojo**.
- Built a **reporting application** using **Node.js**, **JavaScript**, **jQuery**, **data tables**, **MongoDB**, and **Elasticsearch**.
- Designed and developed database systems using **RDBMS concepts** like **Oracle**, **PostgreSQL**, **MySQL**, and written SQL queries, **PL/SQL**, **T-SQL**, stored procedures, and triggers.

- Worked with Relational Databases including **SQL Server, MySQL, PostgreSQL, and MongoDB**.
- Customized **RESTful Web Services** using **Spring RESTful API** with **OAuth security** to ensure secure data exchanges in JSON format.
- Developed **RESTful web services** that support **JSON** for tasks and integrated with web applications. Used **SVN** version control for managing code versions and XML files.
- Built **SOAP-based web services** with **XML** messages and interfaced with **DB2 using Hibernate and XML configuration files**.
- Used **Eclipse SDK** for development and deployment, integrated with **Tomcat Server**, and implemented JUnit for unit testing and **SonarQube** for code analysis.
- Wrote **JUnit test cases** for UI framework classes, **JavaScript** for client-side validation, and used **Mockito** for testing middleware services.
- Configured **Git and Bitbucket** for version control and tested end-to-end using tools like **JMeter, SOAPUI, and DataPower appliances**.
- Extensively used **SOAP UI, Advanced-Rest Client, and Postman** for testing **RESTful web services**.
- Implemented **AWS solutions** including **DynamoDB, EC2, S3, RDS, SNS, CloudWatch, Elastic Load Balancer, and Auto Scaling Groups**.
- Utilized **AWS SDK** to connect with **Amazon SQS** for bulk email processing.
- Created **Maven and ANT** build files for application builds and deployments on **WebSphere Application Server**.
- Designed **BPM-based workflow modules** for implementing business logic rules using **Ilog Jrules**.
- Developed **SOA-based enterprise systems** using **Oracle SOA Suite and WebLogic 10g**.
- Used **Apache Camel** with **URIs** for transport/messaging models like **HTTP, ActiveMQ, RabbitMQ, and JMS**. Installed and configured multi-server, clustered ILOG environment.
- Experienced in developing on **Windows, Linux, Mac OS, and UNIX** environments.
- Deployed applications using **Apache Tomcat and WebSphere Application Servers**.
- Followed **Agile/SCRUM** project management methodology, utilizing **JIRA and Confluence** to track progress.
- Implemented **multi-factor authentication (MFA)** for applications to ensure enhanced security for users during login processes.

Environment: Java, Spring boot, Spring, Ibatis, JavaScript, HTML, CSS, Postgres, PostgreSQL, Restful API, JSON, XML, Websphere, AWS, RDS, DynamoDB, SES, SQS, SNS, elastic search, Maven, JIRA, BPM, iLog, JMS, active, Tomcat, SOA, Git, SVN, JUnit, Mockito, JMeter, Postman, SonarQube, Agile/Scrum, Eclipse, Linux.

Client: Verizon, Seattle, WA.

Aug 2016- Dec 2018

Role: Java Backend Developer

Responsibilities:

- Design and implement **Java/J2EE** client applications using technologies such as **JSP, JPA, Struts, spring, spring boot Hibernate, JSF etc.**
- Responsible for requirements analysis, technical design, implementation, testing and documentation.
- Developed critical components of the application including **spring forms, Spring controllers, JSP views**, and business logic and data logic components that include **Hibernate Entities, Spring-Hibernate DAO** and Spring models following **MVC architecture**.
- Involved in implementation of matching functionality between account and offers and the functionality to manage customer communication and channel preferences using **Spring, Kafka, RabbitMQ and Hibernate**.
- Used **Hibernate persistence** framework on the backend against **Oracle database** for billing details PDF generation flow.
- Written extensive **JUnit testing classes** for comprehensive coverage of test cases.
- Involved in designing and development of presentation layer for monthly bill comparison chart using **JSP, JSTL, and HTML** Integration of Cyber Source Payment Gateway using **SOAP WS for Auto Payment flow**.
- Development to expose User Profile services to other departments users using **RESTful WS**.
- Participated in the daily stand-up meetings as part of **AGILE** process for reporting the day-to-day developments of the work done Used **Apache Maven** to build projects, which assisted in testing, and produced reports on projects.
- Configured JMS Server set up and DB Connection pool setup and deployed Returned items in **WebLogic Server**.

- Used **JMeter** to check load balancing in WebLogic with multi thread.
- Performed unit testing using **JUNIT framework** and used Struts Test Cases for testing Action Classes.
- Automated web service calls in **Postman using JavaScript** and executed the collection using Newman and verified the response in both **JSON and XML**.
- Defined and Created SOA software and hardware infrastructure, including Application Servers, Services Bus, Server Domains etc. Designed user interface using Struts and deployed the application in **Tomcat**.
- Used the **Eclipse as IDE**, configured and deployed the application onto WebLogic application server **using Maven build scripts** to automate the build and deployment process.
- Worked on implementing **Ajax, jQuery methods** in retrieving the data from **JSON files** and loading the claims data on the HTML elements. Used Ant for developing build scripts and deploying the application onto WebLogic.
- Developed Web Services to communicate to other modules using **XML based SOAP and WSDL protocols**.
- Installed in designing the data stage job to implement ILOG JRules Component.
- Executed the test steps defined in Test Cases manually and reported the bugs in **JIRA**.
- Installed and configured the development environment using Web-logic on **Windows NT and LINUX operating systems**. Used Resource Manager to schedule the job in the Unix server.
- Designed and developed the application using agile methodology and followed **TDD, Scrum**.
- Handled cross platform compatibility issues (Firefox, Chrome, Opera and Safari) on both Windows and Mac.

Environment: Java, Spring, Mybatis, Struts, JSF, JavaScript, HTML, CSS, DB2, MS SQL, Rest, XML, Apache CXF, Weblogic, AWS, EC2, S3, JSP, Servlets, JSON, XML, JIRA, jRules, SOA, SVN, JUnit, JMeter, Postman, Agile, Tomcat, Eclipse, Maven, ANT, Linux, Unix, Mac

Client: Nike, Portland, Oregon.

Jan 2014 - Jul 2016

Role: Java Developer

Responsibilities:

- Followed **Agile software development** practice paired programming, test driven development and scrum status meetings.
- Designed a SOA compliance and multi-tenant architecture using **Spring MVC, Mule ESB and Rest service (Jboss Rest-Easy), Jboss Drool, JBPM and Jboss EAP 6**.
- Working on Mule Flow implementation and integration with third party tools like **Drool, Engage One and File net**.
- Effectively interacted with team members and business users from different regions for requirements capture and analysis
- Used Spring Core Annotations for Dependency Injection (Spring DI) and **Spring MVC for Restful API, and Spring Boot for Microservices**.
- Assisted with integrating micro-services with **Docker containers** to build and deploy the project on **AWS EC2 instance**.
- Implemented Singleton, factory design pattern, **DAO design Patterns** based on the application requirements.
- Worked on creation of custom Docker container images, tagging and pushing the images to the servers
- Designed and implemented the UI using **HTML, JavaScript, CSS, JQuery, JSON and AJAX**.
- Used **Scala scripts** for spark machine learning libraries **API execution** for decision trees, ALS, logistic and **linear regressions algorithms**.
- Developed **Spark code using Scala and Spark-SQL** for faster testing and data processing also Created, maintained, and backed up MS SQL Server using scripts.
- Improved functionality by writing **JavaScript and jQuery** to manipulate data from APIs.
- Used **HTML** to make changes on the UI based on the requirement.
- Used Spring framework for the business layer using **Spring Core, DAO, Spring ORM, and Spring Web MVC**.
- Implement the Business Rule and Workflow using Jboss Drool and Jbpm.
- Used **Hibernate as an ORM tool** for connecting to the database and accessing information.
- Writing test scripts using **groovy** for automation testing of the web service.
- Communicated with other systems by using the **Restful web services**.
- Imported and managed multiple corporate applications into SVN.
- Created SQL Statement, Stored Procedure, and **PL/SQL** using **Oracle SQL Developer**.
- **Log4j** is used for the debugging process and also the application is built with Maven.
- Developed the unit test cases using JUnit.

Environment: Java, J2EE, Spring, Hibernate, HTML, JavaScript, CSS, JQuery, JSON, AJAX Eclipse, WebLogic, Spark, JMS, Maven, Restful, PL/SQL, JUnit, Drools, SVN, Windows, Unix.

Client: NCC Finance, Hyderabad, India.

Jan 2013-Sep 2013

Role: Java Developer

Responsibilities:

- Involved in analysis design and development of Loan Processing Application.
- Developed **UI screens** using **JSP, HTML, CSS, and JavaScript**.
- Worked on **JSP, Servlets, Struts framework** and production support issues of the existing applications.
- Development of Action Forms, Action Servlets, Action and Validating Action Forms in **Struts framework**.
- Involved in the development of **model, library, struts and form classes (MVC)**.
- Implemented Struts Dispatch Action class and form bean classes using struts framework.
- Client & server validations were handled using **JavaScript Struts validate plug-in**.
- Implemented Multithreading for handling multiple requests and for high performance.
- Created many stored procedures and scheduled jobs to support our applications to create reports for customers.
- **JMS** is used for exchanging the information.
- Build and maintain **SQL scripts, indexes**, and complex queries for data analysis and extraction.
- Develop a business continuity plan for the SQL Server Databases
- Designed and developed **MDB** that consumed the messages from the Java message queue
- Experience in installing, configuring and deploying application on **Web Logic Server**.
- Developed **DAO pattern** to retrieve the data from database
- Developed web services for sending and getting data from different applications.
- Used **JDBC** to access **Oracle database** for accessing customer information.
- Deployed application on Client **Linux server**.
- Used for compiling and generating war files.

Environment: core Java, J2EE, JSP, HTML, MVC, Servlets, JMS, EJB3.1, Spring, JUnit, PL/SQL, DAO, Web Services, SOAP, WSDL, Oracle, Windows.
