Sr. Data Engineer

PROFESSIONAL SUMMARY:

- Over 9+ years of experience in the IT industry as a SQL Server Developer with sound business analysis skills, with 6 years of experience in BI Development SSIS, SSRS, SSAS with extensive knowledge in Data Warehousing.
- Worked extensively on system analysis, design, development, testing and implementation of projects SDLC.
- Highly experienced in Sub queries, CTE's, joins involving multiple tables.
- Experience in Advanced Excel like Power View, Power BI, Power Pivot and Excel Data Connection. Good hands-on working experience with using all kinds of SQL Server Constraints Primary Keys, Foreign Keys, Defaults, Checks, and Unique, Writing Transact SQL T-SQL Queries, Dynamic-queries.
- Strong ability in defining query for generating drill down reports, handling parameterized reports, and creating stylish report layouts in SSRS.
- Experience in generating Drill through and Drill down reports with Drop down menu option, sorting the data, defining subtotals in SSRS.
- Generated reports using SSRS, Excel Pivot that could be used to send information to diverse group of users.
- Having good knowledge and experience in VBA i.e., exporting and importing the data from Microsoft using VBA.
- Developed Complex database objects like Stored Procedures, Functions, Packages and Triggers using PL/SQL.
- Expertise in SQL Meta Tracker.
- Extensive experience in different type of reports including Tabular forms, Matrix cross Tab report form, Conditional, List items, Charts and Sub reports.
- Experience in Cube designing in Business Intelligence Development Studio SSAS to edit various properties of a cube, including the measure groups and measures, cube dimensions and dimension relationships, calculations.
- Experience in Relational, Multi-Dimensional Star and Snowflake logical modelling.
- Involved in complete SDLC, which includes requirement gathering, analysis, design, development, and Implementation.
- Solid understanding of RDBMS database concepts and Experience in writing complex stored procedures, functions, Indexed views and triggers for data consistency and manipulation.
- Highly Experienced in writing Complex Stored Procedure and Functions.
- Experienced in Performance tuning, and optimization of procedures and queries, SQL Server Agent.
- Experience with SQL Server and T-SQL in creating Tables, Stored Procedures, Views, Indexes, Cursors, Triggers, User Profiles, User Defined Functions, Relational Database Models and Data Integrity in observing Business Rules.
- Expertise in configuring and creating SSIS solutions for ETL and Business Intelligence Process for Data Integration and Migration services.
- Expertise in Merging data from various Heterogeneous Data sources, Populating Dimension and Fact tables in Data warehouses and Data Marts, Cleaning and Standardizing data loaded into OLTP and OLAP databases using SSIS.
- Good understanding of Spark Architecture with Databricks, Structured Streaming.
- As a Data Engineer, responsible for data cleaning, data modeling, data migration, design, and ETL pipeline preparation for both cloud and On-prem platforms.
- Setting Up AWS and Microsoft Azure with Databricks, Databricks Workspace for Business Analytics, Manage Clusters in Databricks.
- Can work parallelly in both AWS and Azure clouds coherently.
- Experience in managing and automating Control flow, Data flow, Events and Logging programmatically using Microsoft .NET framework for SSIS packages.
- Experience in Performance Tuning in SSIS packages by using Row Transformations, Block and Unblock Transformations.
- Involved in installation, configuration, development, deployment of Reporting Services using SSRS 2012/2008/2005.
- Strong Experience in Creating, Configuring, Deploying and Testing SSIS Packages.
- Developed PL/SQL triggers and master tables for automatic creation of primary keys.
- Proactive team player with demonstrated problem solving and analytical reasoning abilities.
- Implemented Agile principles and practices, such as daily stand-up meetings, sprint planning, sprint reviews, and retrospectives, ensuring project transparency and continuous improvement.
- Implemented Agile project management tools, such as JIRA, to track project progress, manage tasks, and enhance team collaboration.

Technical Skills:

Languages	Python, C, T-SQL, PL/SQL, JavaScript, C, Java.
Cloud Services	AWS, Azure
RDBMS	SQL Server 2008/2016/2019, MS-Access.
Front End	MS Visual Basics 6.0.
Web Technologies	HTML, XML, JavaScript, PHP, Shell Scripting.

SQL Server Tools	SQL Server Management Studio, Enterprise Manager, Query Analyzer, SQL Profiler, Data Base Engine Tuning Advisor, Business Intelligence Development Studio, SSIS, SSAS, SSRS, Data Transformation Services.
Operating System	Windows 2000, Windows Server 2003, Windows NT, Windows 95/98/2000 XP/Vista/7/8, Unix.
Methodologies	Agile methodology

Education Details: Bachelor’s in computer science and engineering, KL University

May 2014

PROFESSIONAL EXPERIENCE:

ConEdison, New York

Duration:June 2023 – Aug 2024

Data Engineer

Project Description:

Developed and managed a comprehensive data management system for a utility company specializing in electric and gas meters. The project aimed to enhance data accuracy, streamline meter reading processes, and improve reporting capabilities for better operational efficiency and customer service.

Responsibilities:

- Designed and implemented a relational database schema to store and manage large volumes of smart meter data, including readings, timestamps, and meter attributes. Ensured the schema supported scalability and efficient querying for future data growth.
- Created ETL processes to integrate data from various sources, including electric and gas meters, into the central database. Utilized SQL Server Integration Services (SSIS) to automate data extraction, transformation, and loading, ensuring data integrity and consistency.
- Provided technical support for clients by conducting AWS Well-Architected Reviews and improving security and performance for cloud-hosted workloads.
- Guided clients through the process of implementing AWS Identity and Access Management (IAM) policies and configuring Amazon VPC for secure, isolated networks.
- Developed and optimized complex SQL queries and stored procedures to extract and analyze meter data. Generated reports on energy consumption, usage patterns, and billing accuracy, facilitating actionable insights for operational and strategic decisions.
- Conducted performance tuning of SQL queries and database operations to handle high-volume data efficiently. Implemented indexing strategies and optimized queries to reduce response times and improve overall system performance.
- Led the migration of on-premises workloads to AWS, utilizing AWS Migration Hub, AWS Database Migration Service, and AWS Snowball, ensuring a smooth transition with zero downtime.
- Architected multi-tier applications using Amazon EC2, Elastic Load Balancing (ELB), Auto Scaling, and Amazon RDS, enabling flexible and high-availability environments.
- Implemented data validation and cleansing procedures to identify and rectify discrepancies in meter readings. Ensured the accuracy and reliability of data used for billing and reporting.
- Designed and developed interactive reports and dashboards using SQL Server Reporting Services (SSRS) and Power BI. Provided detailed visualizations and analytics on meter data, consumption trends, and operational metrics to support decision-making.
- Managed infrastructure using Terraform and AWS CloudFormation, enabling efficient, version-controlled infrastructure deployment and management.
- Implemented infrastructure monitoring using Amazon CloudWatch and AWS CloudTrail, setting up automated alerts for resource utilization and performance anomalies.
- Worked with cross-functional teams to integrate the data management system with existing utility management software. Ensured seamless data flow and synchronization between different systems.
- Documented database architecture, SQL procedures, and ETL processes. Conducted training sessions for team members and end-users on system functionalities and best practices.
- Developed features for tracking and analyzing customer usage patterns to enhance billing accuracy and provide insights for customer service improvements.

Equifax, Atlanta, Georgia

Duration:Nov 2021 – May 2023

Sr. Data Engineer

Project Description:

Project focused on data integration and reporting automation. The project aimed to enhance data processing efficiency and streamline reporting workflows to deliver timely and accurate insights to stakeholders. I developed and optimized SQL queries to efficiently extract, transform, and load data from diverse sources into the SQL Server database. Leveraging SSIS, I designed and implemented robust ETL packages to automate data integration processes, ensuring data quality and integrity. Additionally, I utilized SSRS to create visually appealing and interactive reports, empowering stakeholders with actionable insights and facilitating informed decision-making.

Responsibilities:

- Involved in designing, developing, and deploying reports in MS SQL Server environment using SSRS2008 and SSIS in Visual Studio.
- Used SSRS to develop different kinds of reports like canned, ad-hoc reports for the State and Local Agency users.
- Involved in creating multiple parameterized stored procedures which were used by the reports to get the data.
- Worked on formatting SSRS reports using the Global variables and expressions.
- Created parameterized reports, Drill down and Drill through reports using SSRS. Deployed and uploaded the SSRS reports to SharePoint Server for the end users and involved in enhancements and modifications.
- Participated in the Normalization and De-Normalization of database along with creating and managed clustered and non-clustered indexes to improve database performance.
- Designed SSIS packages that could run on various environments by creating various types of XML and SQL Server configuration files for the variables being used in the packages.
- Configured, supported, and maintained all network, firewall, storage, load balancers, operating systems, and software in AWS EC2.
- Worked on Cloudera distribution and deployed on AWS EC2 Instances.
- Worked on integrating Apache Kafka with Spark Streaming process to consume data from external REST APIs and run custom functions.
- Build and configured the AWS infrastructure and setup the infrastructure using resources EC2, S3, Dynamo DB, Cloud watch, EMR, Auto scaling.
- Extensively used SSIS Import/Export Wizard, for performing the ETL operations and actively supported business users for change requests.
- Extensively used for loop Containers and foreach loop containers to perform dynamic tasks in SSIS.
- Monitored performance and optimized SQL queries for maximum efficiency and planned the complete Back-up of various Databases for disaster recovery scenarios.
- Used VBA for exporting and importing data.
- Wrote conversion scripts using SQL, PL/SQL, stored procedures, functions and packages to migrate data.
- Built effective queries for high-performance reporting and rendered them to HTML, XML, PDF and Excel formats using Reporting Services.
- Worked on Excel Power Pivot for providing ad-hoc reporting for the clients.
- Deployed the generated reports on to the server and fine-tuned the database objects and server to ensure efficient data retrieval.
- Proficient in querying and manipulating large-scale datasets using BigQuery's SQL-like language.
- Strong understanding of data modeling principles and schema design in Google BigQuery.
- Experience in designing and optimizing table structures, partitioning, and clustering for efficient query performance.
- Proficient in integrating BigQuery with other data platforms, tools, or services to automate data pipelines.
- Experience in using query caching, partition pruning, and other optimization techniques specific to BigQuery.

Environment: MS SQL Server 2005 Query Analyzer,BigQuery, SSIS, SQL Profiler, MS SQL Reporting Services 2005,PL/SQL, AWS, MS Excel, Power Pivot, Window XP, Toad.

Client: Edward Jones Investments- St. Louis, Missouri

Duration: July 2018 to October 2021

Role: Data Engineer

Project Description:

The project focused on enhancing the accuracy, efficiency, and accessibility of critical business data. Working closely with cross-functional teams, I played a key role in gathering requirements and understanding the specific data needs of various stakeholders. Leveraging SQL Server, SSIS, and SSRS, I designed and implemented robust data integration pipelines and automated reporting solutions. This involved extracting, transforming, and loading (ETL) data from disparate sources into the SQL Server database and creating visually appealing and interactive reports to facilitate data-driven decision-making.

Responsibilities:

- Proficient in Java programming language, including core Java concepts, object-oriented programming (OOP), and data structures.
- Experienced in developing efficient and scalable Java applications for data processing and analysis.
- Strong understanding of data structures, algorithms, and problem-solving techniques using Java.
- Familiarity with front-end web technologies like HTML, CSS, JavaScript, and frameworks like Angular or React.
- Experience in developing dynamic web applications using Java-based web frameworks (e.g., Spring).0
- Involved in requirement gathering, design and development.
- Configured AWS Shield and AWS WAF to protect applications against DDoS attacks and mitigate security vulnerabilities.
- Involved in creating views to display only required information and to maintain privacy.
- Created triggers to validate consistent data entry into the database.
- Developed and maintained CI/CD pipelines for deploying applications and services on AWS, using tools like AWS Code Pipeline, Code Deploy, and Code Build.

- Worked on analyzing Hadoop cluster and different Big Data analytic tools including Pig, hive, HBase, Spark and Sqoop
- Implemented AWS IAM best practices, including role-based access control (RBAC), to ensure least privilege access and secure workloads.
- Wrote many complex SQL queries and created constraints to maintain data integrity.
- Involved in development and implementation of SSIS, SSAS and SSRS application solutions for various business units across the organization.
- Created SSIS package to transfer data between heterogeneous data sources.
- Transforming and validating data using SSIS Transformations and scheduled SSIS packages.
- Extensively used various SSIS Control flow tasks like Loop Containers, FTP, Bulk insert task, transfer job task etc. and different data flow tasks like Derived Column, Fuzzy lookup, merge join, Multicast, data conversion etc.
- Conducted security audits and vulnerability assessments on AWS environments, identifying and mitigating risks, and improving the overall security posture.
- Extensively used SSIS Data Profiler Task to profile target source systems tables views prior to building ETL solutions, which was instrumental in cleaning data for data consistency and designing the table structures.
- Deployed SSIS packages across various Environments Development/Test using configuration files and variables.
- Created reports using SSRS from various sources like SQL Server and Cubes from Analysis Services.
- Worked on SSRS Reports, Sub Reports, Data Drill-Down, and Data sorting/grouping.
- Designed reports using bar-charts, Line-charts, and Pie-charts on data from cubes and SQL Server in Excel.
- Scheduled the reports to refresh and run on daily, weekly, and monthly basis in the report manager.
- Worked on XML along with PL/SQL to develop and modify web forms.
- Set up centralized logging and monitoring solutions using AWS CloudTrail, CloudWatch Logs, and GuardDuty to detect and respond to threats in real-time.
- Created SSAS OLAP Cubes and Partitioning Cubes, monitored and full and incremental load using cube wizard.
- Involved in performance tuning of cubes, optimization of queries, to improve performance.
- Supported team for performance testing by extending work hours and on weekends.

Environment: MS SQL Server 2012/2008/2008 R2, SSIS, SSAS, SSRS, PL/SQL, AWS, Visual Studio 2012/2010, Windows 7, SQL Server Agent, Power Pivot, Crystal Reports.

Client: John Deere Urbandale - Iowa

Duration: May 2016 to June 2018

Role: Data Engineer

Project Description:

The project involved developing a scalable and efficient data pipeline using Azure Data Factory for seamless data ingestion, transformation, and loading into Azure Synapse Analytics. By incorporating Azure Databricks, I performed complex data transformations and analytics to derive meaningful insights from the collected data. Additionally, I utilized Azure Event Hubs and Azure Stream Analytics to process real-time data streams from IoT devices, enabling timely actions and decision-making. The project also involved optimizing performance and scalability by implementing best practices for Azure Synapse Analytics, and Azure SQL Database.

Responsibilities:

- Designed and implemented end-to-end data solutions on Azure, leveraging services such as Azure Data Factory, Azure Databricks, and Azure Synapse Analytics, to enable efficient data processing, transformation, and analytics.
- Developed scalable data pipelines using Azure Data Factory to ingest, transform, and load data from various sources into target data stores, ensuring data quality, consistency, and timeliness.
- Utilized Azure Databricks for big data processing and analytics, performing data transformations, aggregations, and machine learning tasks on large-scale datasets.
- Implemented data storage solutions on Azure, including Azure Blob Storage and Azure Data Lake Storage, optimizing data organization, access patterns, and security controls.
- Designed and managed Azure SQL Databases and Azure Synapse Analytics (formerly SQL Data Warehouse) for efficient data storage, retrieval, and querying, ensuring optimal performance and scalability.
- Implemented advanced data integration and orchestration workflows using Azure Logic Apps, Azure Functions, and Azure Event Grid, enabling seamless data flow and automation across different systems and services.
- Applied Azure Machine Learning to develop and deploy predictive models, leveraging Azure's scalable infrastructure for model training, evaluation, and scoring.
- Implemented data governance and security measures on Azure, including access control, encryption, and monitoring, ensuring compliance with data privacy regulations and industry best practices.
- Worked closely with cross-functional teams, including data scientists, analysts, and stakeholders, to understand business requirements, provide technical guidance, and deliver data-driven solutions.
- Actively stayed updated with the latest Azure services, features, and industry trends, evaluating and recommending new technologies to enhance data engineering capabilities and optimize workflows.
- Collaborated with DevOps teams to implement CI/CD (Continuous Integration/Continuous Deployment) pipelines using Azure DevOps, enabling seamless deployment and version control of data engineering solutions.
- Implemented monitoring and logging solutions using Azure Monitor and Azure Log Analytics, ensuring proactive identification of issues, troubleshooting, and optimizing performance of data engineering processes.

- Utilized Azure Data Catalog and Azure Data Share to enable data discovery, cataloging, and sharing across teams and organizations, promoting data collaboration and self-service analytics.
- Conducted performance tuning and optimization of Azure SQL Databases, Azure Synapse Analytics, and Azure Data Lake Storage, improving query performance and reducing data processing costs.
- Demonstrated strong understanding of Azure security best practices, implementing data encryption, access controls, and auditing mechanisms to protect sensitive data assets.

Environment: Linux, Cloudera Hadoop distribution, HDFS, ETL, Azure Data Factory, Azure Databricks, Azure Synapse Analytics, Azure Blob Storage, Azure SQL Database

Client: Red Hat India Private Limited - India **Duration:** June 2014 to February 2016

Role: Data Analyst

Project Description:

Responsible for collecting, cleaning, and manipulating data from various sources, creating reports and visualizations to communicate findings, and identifying trends and insights to support business goals. Data analysts may use statistical methods and tools such as SQL, Excel, R, and Python to analyze data.

Responsibilities:

- Document the complete process flow to describe program development, logic, testing, and implementation, application integration, coding.
- Recommended structural changes and enhancements to systems and Databases.
- Conducted Design reviews and technical reviews with other project stakeholders.
- Was a part of the complete life cycle of the project from the requirements to the production support.
- Created test plan documents for all back-end database modules.
- Used MS Excel, MS Access, and SQL to write and run various queries.
- Worked extensively on creating tables, views, and SQL queries in MS SQL Server.
- Worked with internal architects and assisting in the development of current and target state data architectures.
- Coordinate with the business users in providing appropriate, effective, and efficient way to design the new reporting needs based on the user with the existing functionality.
- Remain knowledgeable in all areas of business operations to identify systems needs and requirements.
- Add according to your clients and business stories at client location.

Environment: Linux, MS-SQL, AWS, MS-Office, ETL, Informatica, Python, Teradata.
