1266 College Dr, Latrobe, PA 15650

PROFILE SUMMARY

- Results -oriented professional with over 13 years of experience** in designing and developing scalable, high-performance web applications using **Java, Spring Boot, Hibernate, and RESTful APIs** by creating robust backend solutions that incorporate multi-tier architectures, ensuring seamless integration, optimal functionality, secure data transactions, and adherence to enterprise-level requirements for mission-critical business applications in diverse industries.
- Skilled in building microservices architectures** utilizing **Docker** for containerization and **Kubernetes** for orchestration by developing resilient services, implementing efficient deployment strategies, optimizing performance, ensuring fault tolerance, enabling auto-scaling, and integrating **CI/CD pipelines** that guarantee high availability, maintainability, and seamless performance in dynamic production environments.
- Expertise in designing secure, highly available payment processing systems** leveraging **Java, Apache Kafka for real-time data streaming, and AWS services** for cloud deployment by implementing secure transaction workflows, optimizing system performance, adhering to industry compliance standards, and ensuring robust, fault-tolerant solutions that meet complex financial application requirements.
- Proficient in developing cloud-native applications** using **Azure and AWS**, incorporating scalable infrastructures with Terraform, while leveraging **Jenkins and GitHub Actions** for CI/CD pipelines to enhance deployment efficiency, automate infrastructure provisioning, minimize downtime, ensure production-grade cloud solutions, and align applications with industry-standard security, performance, and compliance best practices.
- Experienced at driving Agile and Scrum methodologies** by utilizing **JIRA for sprint planning and backlog management**, Confluence for comprehensive documentation, and Jenkins for continuous integration pipelines, ensuring iterative deliveries, **promoting a DevOps culture**, coordinating cross-functional teams, maintaining continuous feedback loops, and accelerating time-to-market with improved project outcomes.
- Strong background in relational and NoSQL database design and optimization**, including **Oracle, MySQL, and MongoDB** by implementing indexing strategies, query optimization techniques, data replication methods, and backup processes to ensure high availability, superior performance, data integrity, and consistency for distributed, large-scale enterprise applications across various industry domains.

CORE COMPETENCIES

Java Application Development	IT Infrastructure Management	Project Coordination & Delivery
Application Testing & Solutioning	Software Development Lifecycle	IT Integration & Enhancement
Infrastructure as Code (IaC)	Process Enhancement	Cross-Functional Coordination

TECHNICAL SKILLS

Languages:	Java 17/11/8, Golang, Python, JavaScript/TypeScript, SQL
Java Technology:	Java/J2EE, Struts, Spring MVC, Spring Boot, Spring Security, Spring Batch, Spring AOP, Spring Integration, Spring Cloud, Hibernate, JPA
JavaScript & TypeScript:	Node.js, React, Next, Vue, Angular
AWS:	EC2, Lambda, Fargate, S3, EBS, RDS, DynamoDB, IAM, Amplify
Azure:	Azure AD, RBAC, AKS, AAD
Database:	PostgreSQL, MySQL, MongoDB, Oracle, Cassandra
CI-CD & DevOps:	GitHub actions, Gitlab, Terraform, Docker, Kubernetes
Scripting:	Shell, PowerShell, Bash
Version Control:	Git (BitBucket, GitHub, GitLab)
Security:	OAuth2.0, JWT, Kerberos
Tools:	Jenkins, Maven, JUnit, Selenium, Mockito, Apache Spark

WORK EXPERIENCE

Client: ONE MAIN FINANCIAL

October 2024- Present

Role: Lead Software Engineer

- **Architecting and overseeing** the development of scalable financial applications using **Java Spring Boot**, ensuring robust integration with core banking systems to streamline loan processing, risk management, and customer onboarding while adhering to industry regulations and security standards.
- **Leading cross-functional teams** in designing and deploying microservices architecture leveraging **Apache Kafka** for real-time data streaming and event-driven communication, enabling faster loan approval processes and enhancing the accuracy of financial transactions.
- **Implementing and maintaining** continuous integration and deployment pipelines using **Jenkins**, automating build, test, and deployment processes to reduce release cycle times, minimize production incidents, and ensure high availability of financial applications.
- **Driving cloud adoption strategies** by migrating legacy systems to **AWS**, optimizing infrastructure costs, enhancing scalability for high-volume financial transactions, and ensuring compliance with financial data privacy regulations such as PCI DSS.
- **Ensuring robust data security** and compliance by integrating **Splunk** for real-time monitoring, log management, and threat detection, reducing security risks and maintaining the integrity of sensitive financial data in alignment with industry best practices.
- **Optimizing database performance** by designing efficient data models and stored procedures using **Oracle DB**, ensuring high transaction throughput, reduced query latency, and consistency of critical financial data across distributed systems.
- **Leading code review sessions** and enforcing best practices in software development using **SonarQube**, ensuring code quality, security, and maintainability while mentoring junior engineers on secure coding standards and performance optimization techniques.
- **Collaborating with DevOps teams** to containerize financial applications using **Docker**, enhancing portability, scalability, and consistency across development, testing, and production environments while streamlining deployment processes.
- **Establishing effective API governance** by implementing **Postman** for automated API testing and documentation, ensuring seamless integration of third-party financial services and maintaining high availability and reliability of core banking APIs.
- **Managing the deployment** of high-performance caching solutions using **Redis**, reducing database load and improving response times for transaction-heavy financial applications, thereby enhancing user experience and system resilience.
- **Directing agile development cycles** using **JIRA**, ensuring timely delivery of product features, aligning engineering efforts with business goals, and fostering a culture of continuous improvement through regular sprint reviews and retrospectives.
- **Leading performance tuning efforts** by leveraging **New Relic** for real-time application monitoring and performance optimization, identifying bottlenecks, and ensuring financial applications meet high availability and low-latency requirements.
- **Overseeing integration** of payment gateways and third-party financial APIs using **MuleSoft**, ensuring secure, reliable, and scalable transactions processing while meeting compliance standards and enhancing customer transaction experiences.
- **Promoting best practices** in version control and collaboration by standardizing workflows using **GitLab**, ensuring seamless coordination across distributed teams, maintaining code integrity, and supporting efficient release management processes.

Client: BlackLine, Woodland

August 2020- October 2024

Role: Lead Software Engineer

Key Result Areas:

- **Engineered** robust **Spring Boot microservices** for advanced **transaction management systems**, leveraging **Spring Cloud** and **Spring Security** to ensure secure authentication and seamless scalability. This resulted in a **30% improvement** in integration speed with legacy systems by optimizing API gateways, enhancing encryption protocols, and streamlining service discovery processes.
- **Transitioned REST-based backends** to high-performance **gRPC services** while **refactoring a monolithic architecture** into modular **Spring Boot microservices**, leading to a **40% increase** in system scalability and **25% reduction** in maintenance time. This transformation enabled faster interservice communication, simplified deployment, and boosted system resiliency in cloud environments.
- **Mentored** a team of **5 junior Java developers**, fostering technical independence and significantly **enhancing team productivity** by providing continuous code reviews, best practice sessions, and architectural guidance, which resulted in **reduced onboarding time** and increased code quality, ultimately boosting project delivery timelines and team cohesion.

- **Constructed multi-threaded applications** in **Python** and **Java** to monitor circuit performance, optimizing real-time data processing by **35%** and reducing system latency by **20%** through concurrency optimization, efficient thread management, and robust error-handling mechanisms essential for real-time monitoring in high-traffic distributed systems.
- **Automated cloud infrastructure management** using **Terraform**, achieving a **40% increase** in deployment efficiency by establishing Infrastructure as Code (IaC), **reducing manual efforts by 50%**, and **eliminating configuration errors**, thus enhancing deployment consistency, boosting scalability, and improving recovery time for mission-critical applications.
- **Integrated Apache Kafka** for resilient **message delivery**, ensuring **99.9% message reliability** across distributed interservice communications by architecting high-throughput messaging pipelines, implementing replication for fault tolerance, and configuring optimized partitioning to support low-latency real-time event streaming in microservices architectures.
- **Set up Apache Spark Streaming** with **Kafka** and **HDFS**, enabling **real-time data processing of over 1 million records per hour** by designing scalable streaming pipelines, implementing checkpointing for fault tolerance, and providing distributed storage solutions optimized for large-scale data analytics and operational intelligence.
- **Architected a highly available Cassandra database** solution, achieving **99.99% uptime** and enabling **low-latency, high-volume data handling** across distributed nodes. The system handled **1,000 concurrent requests per second**, ensuring fault tolerance through multi-data center replication and tuning read/write consistency levels for mission-critical applications.
- **Enhanced DynamoDB query efficiency by 20%** and **cut AWS costs by 15%** by implementing optimal **data access patterns**, refining **partitioning strategies**, and leveraging on-demand capacity modes. This ensured predictable performance, efficient storage utilization, and significant cost savings for scalable serverless applications.
- **Applied JUnit** and advanced **test automation tools**, achieving **90% test coverage** and **reducing testing time by 35%** through parameterized testing, mocking external dependencies, and integrating automated pipelines in **Jenkins** for seamless continuous integration and delivery, ensuring robust code quality and faster deployment cycles.
- **Collaborated** closely with **front-end teams** to achieve **seamless integration** using **JavaScript** and **TypeScript (Next.js and React)**, focusing on user-centric services by optimizing RESTful APIs, streamlining authentication workflows, and enhancing UI responsiveness, ultimately delivering cohesive and high-performance web applications.
- **Optimized development workflows** with **Docker**, **Kubernetes**, **AWS EC2**, **EKS**, and **Fargate**, **improving deployment time by 25%** and **increasing container orchestration efficiency by 40%** through automated CI/CD pipelines, scalable microservices deployment, and robust resource management strategies, enhancing development agility.
- **Developed serverless AWS Lambda functions** to **automate healthcare data workflows**, cutting **infrastructure costs by 40%** and **improving system response times by 25%** by handling **over 100,000 events per minute**, leveraging event-driven architectures, and ensuring rapid scalability without compromising system performance.
- **Deployed microservices on Azure Kubernetes Service (AKS)** for **scalable financial applications**, ensuring high availability, robust security compliance, and seamless scalability by configuring automated scaling policies, implementing secure networking solutions, and integrating continuous deployment pipelines for efficient production rollouts.

Client: Ro, NY

June 2017– April 2020

Role: Sr. Software Engineer

Key Result Areas:

- **Designed and developed** REST-based microservices using **Spring Boot** to enhance service delivery through efficient API management by optimizing scalable architectures, streamlining performance for high-traffic environments, ensuring seamless integration with third-party services, implementing robust error handling, and maintaining secure authentication processes to guarantee uninterrupted healthcare operations and improved user experience.
- **Leveraged AWS services** such as **AWS Lambda** for serverless computing and **Amazon S3** for secure, scalable data storage, ensuring high availability, fault tolerance, and performance optimization while supporting real-time healthcare data processing, implementing secure access policies, maintaining compliance with industry regulations, and enabling rapid scaling of critical applications based on operational demands.
- **Engineered** a real-time **regulatory compliance monitoring system** that tracks changes in telehealth regulations, utilizing **JEE Design Patterns** to automatically identify, evaluate, and assess operational impacts of new regulations, enabling seamless updates, reducing compliance risks, enhancing operational efficiency, and supporting healthcare providers in adapting processes quickly without disruptions to patient care services.
- **Implemented Azure Active Directory (AAD)** with **role-based access control (RBAC)** for comprehensive **HIPAA** and **GDPR** compliance, strengthening data security by enforcing granular access control, automating user authentication, managing multi-tenant cloud environments, integrating secure APIs, and safeguarding patient health information through encryption and identity management protocols across distributed healthcare applications.
- **Integrated Apache Kafka** messaging systems with healthcare platforms, enabling efficient real-time data streaming and event handling by designing robust messaging pipelines, implementing fault-tolerant architectures, optimizing throughput for high-volume data ingestion, streamlining communication across distributed networks, and ensuring consistent, low-latency data flow essential for real-time clinical decision-making processes.
- **Deployed, managed, and optimized MongoDB clusters**, crafting advanced **JavaScript** for **DML operations** tailored for

healthcare data management, ensuring efficient query performance, secure storage, reliable data retrieval, automated backup strategies, replication for high availability, and indexing techniques that support fast, accurate access to large-scale clinical data across distributed environments.

- **Managed** comprehensive device-related datasets within a **wide-area network**, ensuring data integrity, accessibility, and security by implementing efficient storage solutions across **PostgreSQL**, **Amazon RDS**, and **Oracle** databases while maintaining high-availability architectures, automating data replication, optimizing query performance, and supporting real-time healthcare data processing for clinical operations and patient monitoring.
- **Provisioned, configured, and maintained** highly scalable **Aurora PostgreSQL** clusters, guaranteeing optimal database performance, low-latency access, and high availability by implementing automated backup strategies, configuring read replicas for load balancing, monitoring resource utilization, fine-tuning performance parameters, and supporting critical healthcare applications requiring continuous uptime and real-time data processing.
- **Applied** advanced algorithms and optimized **data structures** to enable split-second decision-making, leveraging **JDK 1.8** and **J2EE technologies** such as **EJB** and **JMS** for building scalable, high-performance healthcare applications that handle complex data operations, ensuring low-latency processing, maintaining transactional integrity, and enabling real-time analysis essential for mission-critical healthcare environments.
- **Developed** a robust **healthcare analytics tool** using **React** and **GraphQL** for real-time data querying, delivering dynamic dashboards that provide actionable insights, enabling healthcare providers to make data-driven decisions, streamlining clinical workflows, supporting predictive analytics for patient care, and integrating secure APIs for seamless access to distributed healthcare systems and datasets.
- **Ensured WebSphere-based healthcare applications** met stringent security standards and compliance requirements by implementing robust encryption methods, establishing multi-layered access controls, conducting comprehensive security audits, automating vulnerability scans, maintaining audit trails for regulatory adherence, and safeguarding sensitive patient information through secure communication channels and encrypted data storage.
- Implemented end-to-end **CI/CD pipelines** using **Jenkins** and **Docker**, streamlining development and release cycles for software solutions by automating build processes, integrating automated testing for continuous quality assurance, supporting containerized deployments for consistent environments, enabling rapid feature iterations, reducing downtime, and enhancing overall delivery efficiency and software reliability in healthcare systems.

Client: NextToll, NY

January 2014- March'2017

Role: FullStack Developer

Key Result Areas:

- **Led** the transition to scalable SaaS solutions by **architecting** and **deploying** Spring Boot-based cloud platforms that dynamically scaled with user growth, boosting system scalability by 30%, optimizing backend services, ensuring seamless user onboarding, and enhancing platform reliability to support global financial operations effectively.
 - **Implemented** Apache Spark to efficiently process large-scale financial data stored in AWS S3, achieving a 40% increase in data processing speed while orchestrating distributed data pipelines, reducing latency, and enhancing overall analytics capabilities to deliver real-time investment insights for rapid market decision-making.
 - **Supported** UI/UX teams in crafting frontend pages using ReactJS, significantly improving page load times by 25% and increasing user satisfaction by 20% by applying component optimization techniques, enhancing client-side rendering performance, and ensuring responsive design principles for delivering seamless user experiences.
 - **Leveraged** Material-UI (MUI) to integrate multi-language support, enabling investment platforms to serve a diverse global client base with real-time language preferences, ensuring accessibility, enhancing user retention, and delivering personalized user interfaces critical for successful global trading operations.
 - **Configured** Kerberos authentication to secure access to Hadoop services, ensuring strict compliance with security protocols and enhancing big data analytics capabilities by strengthening access control, safeguarding sensitive financial data, and streamlining secure communication across distributed big data processing environments.
 - **Optimized** investment platform performance by applying Angular Lazy Loading and ahead-of-time (AOT) compilation, facilitating faster loading times and improving client interaction by reducing initial bundle sizes, enhancing rendering speed, and delivering highly responsive web applications tailored for dynamic trading environments.
 - **Created** a real-time device management dashboard for connected financial trading terminals using Angular, providing intuitive monitoring of terminal statuses, secure communication channels, and rapid troubleshooting mechanisms, ensuring operational continuity and enhancing visibility across trading infrastructures in real-time environments.
 - **Showcased** expertise in Unit Testing using JUnit, Jasmine, Mockito, and Karma, ensuring the reliability and functionality of financial software by implementing rigorous test coverage, automating test suites, and establishing continuous testing pipelines that delivered defect-free, production-ready applications with minimal downtime.
 - **Utilized** GIT for version control and JIRA for bug tracking and project management, maintaining high standards in financial software development and deployment by enforcing Git branching strategies, tracking sprint progress in JIRA, and automating release management to streamline delivery cycles and consistently meet quality benchmarks.
-

Key Result Areas:

- **Engineered** an inventory management system leveraging **Object-Oriented and Service-Oriented Architecture**, which tracks product availability, restocks, and order processing in real time, ensuring customers always see accurate stock levels, products are shipped promptly, and operational workflows remain seamless for enhanced customer satisfaction.
- **Developed** a dynamic pricing engine that adjusts product prices in real-time by analyzing various factors such as market demand, competitor pricing, and inventory levels, boosting e-commerce competitiveness, optimizing prices dynamically, and increasing overall revenue by leveraging advanced pricing strategies tailored to market fluctuations.
- **Employed** JavaScript for developing dynamic front-end components, significantly enhancing user interactivity in insurance applications by ensuring real-time engagement, improving user retention, supporting responsive design principles, and creating intuitive interfaces that deliver seamless experiences for high-traffic, customer-centric digital insurance platforms.
- **Developed** a real-time fraud detection system that uses **machine learning models and RESTful APIs** to analyze transaction patterns, accurately identifying and preventing fraudulent transactions in real time, thereby ensuring secure e-commerce environments and maintaining user trust through robust security and compliance frameworks.
- **Created** a real-time chatbot using **J2EE technologies**, providing immediate customer support through real-time chat while leveraging **EJB for scalability and JMS for reliable message delivery**, ensuring high availability, seamless user interaction, and reduced operational costs by automating critical customer service workflows.
- **Developed** a scalable order processing system using **EJB, JMS, and MQ** to efficiently handle high volumes of incoming orders, ensuring real-time processing, payment verification, and inventory updates while optimizing performance, minimizing downtime, and supporting e-commerce businesses during peak operational periods.
- **Engineered** real-time applications using **Java Development Kit (JDK) 1.8 or higher** and a comprehensive **suite of Java EE technologies**, including **EJB, JDBC, JMS, MQ, JAXB, REST, and JAX-WS**, ensuring robust performance, high availability, secure data transactions, and seamless integration across enterprise systems.

EDUCATION

Bachelor of Science in Computer Science from the University of Pennsylvania, Pennsylvania in 2010
