

K HARSHITHA

(Sr.DevOps/Site Reliability Engineer)

G-Mail: harshitha.ch991@gmail.com

Contact: +1(571)463-2948

PROFESSIONAL SUMMARY:

Experienced Sr. AWS & Azure DevOps/Site Reliability Engineer dedicated to automation and optimization for over 10+ years, Understands and manages the space between operations and development to quickly deliver features to customers, has experience with the cloud, as well as DevOps automation development for Linux systems and Windows, brings maturity, enthusiasm, and a drive to learn new technologies along with real-world experience.

- Experience working with Amazon Web Services (AWS) infrastructure tools and services, such as Amazon Cloud Formation, AWS Connect services, Amazon EC2, Amazon VPC, and AWS Identity and Access Management (IAM), to support and manage ECS, EKS clusters and services.
- Expertise in designing and building applications using Spring Boot, AWS Glue, and Kafka, leveraging Spring Boot's microservice architecture for scalable solutions, integrating AWS Glue for seamless ETL operations, and utilizing Kafka for real-time stream processing across distributed systems.
- Deployed Azure IaaS virtual machines (VMs) and Cloud services (PaaS role instances) into secure V-Nets and subnets.
- Deployed Azure resource manager-based resources.
- Implemented Security in Web Applications using Azure and deployed Web Applications to Azure.
- Familiar with Dependency Visualization in Azure migrate for deep analysis and identify application dependencies.
- Worked with the Client team to build a flow diagram for the existing Training environment.
- Did pilot migration of Dev/Test workloads via lift & shift to Azure using Azure Site Recovery.
- Experience setting up and managing ECS environments for high availability and fault tolerance, including configuring redundancy and failover for containerized applications.
- Experience with other containerization platforms and tools, such as Kubernetes, Docker, and Docker Compose, and the ability to compare and contrast their features and capabilities with ECS.
- Experience in writing Cloud Formation templates to automate AWS environment creation along with the ability to deploy on AWS, using build scripts (AWS CLI) and automate solutions using Shell and Python.
- Hands on Experience in using AWS cloud services like EC2, EBS, AMI, IAM, RDS, Route 53, CloudFront, AWS Cloud Watch, Cloud Formation, Security Groups, SQS, SNS, VPC, ELB, ECS, EKS, Elastic Beanstalk, Auto Scaling, Amazon EMR, Elasticache, and AWS S3.
- Experience with AWS Lambda, AWS Code Pipeline and Using Python included Boto3 to supplement automation provided by Ansible and Terraform for tasks such as encrypting EBS volumes backing AMIs and scheduling Lambda functions for routine AWS tasks.
- Extensively used Docker for virtualization, build, run, and deploy the application securely for fastening the build/release engineering. Expertise in setting up Docker environments Docker Daemon, Docker Client, Docker Hub, Docker Registries, Docker Compose and handling multiple images by storing them in containers to deploy.
- Experience in creating Puppet Manifests and modules to automate system operations. Worked on installation and configurations of Puppet Agent, Puppet Master and deployed Puppet Dashboard and Puppet DB for configuration management to existing infrastructure.
- Extensively worked on Jenkins, Harness, Github Actions and Bamboo, Gitlab by installing, configuring, and maintaining the purpose of Continuous Integration (CI) and End-to-End automation for all build and deployments implementing CI/CD for the database using Jenkins.
- Experience deploying and managing Kubernetes clusters using Amazon EKS, including the ability to create, configure, and launch EKS clusters, nodes, and pods.
- Ability to collaborate with cross-functional teams, such as Developers, DevOps engineers, and infrastructure teams, to design, deploy, and manage EKS-based solutions.
- Expertise in using build tools like Maven and ANT for the building of deployable Artifacts such as war and ear from Source Code also experienced in deploying the artifacts to Nexus Repository Manager and Artifactory
- Experienced in Branching, Merging, Tagging, and maintaining the version across the environments using SCM tools like GIT and SVN, perforce on UNIX and Windows environments, migrated SVN repositories to GIT and proficient in using different Bug tracking tools like Jira and ServiceNow.
- Experience in working on web servers like Apache and application servers like Weblogic, Tomcat, WebSphere, JBoss to deploy code & deployment in DevOps through automation using scripting languages such as Python, Bash.

- Experience in Firewall management, OS security, scheduling job using Cron and a strong understanding of advanced network protocols like TCP/IP, UDP, IPv4, IPv4 Subnetting, IPv6, DHCP, PXE, SSH, FTP.
- Exposed to all aspects of the Software Development Life Cycle (SDLC) and in-depth understanding of the principles and best practices of Software Configuration Management in Agile, Scrum and waterfall methodologies.
- Expertise in Linux/UNIX system builds, administration, installations, upgrades, troubleshooting on different distributions such as Ubuntu, CentOS, Red Hat.

TECHNICAL SKILLS:

Cloud Platforms	AWS (EC2, Lambda, S3, IAM, RDS, ECS, EKS, VPC, SQS, CloudFormation, CloudWatch, SNS, S3 Buckets)
	Azure (VMs, Azure AD, Azure Functions, Blob Storage, Azure Monitor, ARM Templates, Azure SQL)
	Google Cloud Platform (GCP) (Compute Engine, GKE, Cloud Storage, Cloud SQL, GCP Firewall, Stack driver)
Infrastructure as Code (IAC)	Terraform, CloudFormation, Azure ARM Templates, GCP Templates
Continuous Integration/Delivery	Jenkins, GitHub Actions, Jenkins Pipelines, Bamboo, GitLab CI/CD, CircleCI
Automation & Configuration Management	Ansible, Chef, Puppet, Terraform, Bash, Python, Shell scripting
Containerization & Orchestration	Docker, Kubernetes (GKE, PKS), Helm, Kubernetes YAML, Docker Compose
Cloud Security	AWS IAM, Azure Active Directory, VPC Security Groups, EC2 Security, AWS WAF, Cloud Custodian, Trusted Advisor
Monitoring & Logging	CloudWatch, Nagios, ELK Stack (Elasticsearch, Logstash, Kibana), Splunk, Datadog, Stack driver, Grafana
Version Control	Git, SVN, Bitbucket, GitHub, GitLab
Databases	MySQL, MongoDB, DynamoDB, RDS, Snowflake, SQL Server, Azure SQL
CI/CD Tools	Jenkins, GitHub Actions, Bamboo, GitLab CI/CD, CircleCI, Maven, Gradle, JFrog Artifactory, Octopus Deploy
Automation Scripts	Python (Boto3, AWS SDK), Bash, Shell, Ruby, Groovy, PowerShell
Deployment & Release Management	Kubernetes, Docker, ECS, EKS, Helm, Docker-Maven-Plugin, Elastic Beanstalk, AWS Lambda

CERTIFICATIONS:

- AWS Solution Architect – AWS
- Terraform Associate(003) – Hashicorp

PROFESSIONAL EXPERIENCE:

Bank Of America, Remote, USA

Oct 2024 – Present

Sr. AWS DevOps / Site Reliability Engineer

Responsibilities:

- Configured AWS cloud infrastructure as code (IAC) using Terraform, enabling seamless provisioning of EC2, AWS Connect services, S3, IAM, EBS, ECS, EKS, VPCs, ELBs, Security Groups, SQS queues, S3 buckets, and EC2 instances.
- Automated continuous deployment workflows using Jenkins and GitHub Actions, ensuring efficient delivery of Spring Boot applications to AWS environments.
- Designed and built CI/CD pipelines for AWS Glue ETL workflows, integrating data processing with S3, DynamoDB, and RDS, and automating job execution using AWS Lambda.
- Managed AWS IAM, creating and configuring users, groups, roles, and policies to enforce fine-grained access control.
- Designed and maintained AWS S3 storage solutions, configuring permissions, logging, versioning, and tagging for optimized data management.
- Designed, built, and deployed a multitude application utilizing almost all of the AWS stack (Including Cloud formation, Service catalog, EC2, R53, S3, RDS, SNS, SQS, IAM, EIP, EBS, ECS, LAMBDA, VPC), focusing on high-availability, fault tolerance, and auto-scaling with Cloud watch monitoring.

- Performed AWS cloud deployments for web applications utilizing cloud formation as IAC and orchestrating the service catalog products to standardize the deployment process.
- Worked on creating custom tools using bash and python to automate the CI/CD pipelines.
- Created a tool using python and boto3 that can help start/stop the AWS non prod environments which in turn can help reduce the AWS cost expenditure.
- Expertise in right sizing of the infrastructure and keeping the bill of the cloud Infra optimized.
- Hands on experience to design/build/setup an application's database, backend apps, deployment strategy, release management, configuration management from scratch on AWS cloud.
- Wrote custom python boto3 scripts to check the limits of AWS services using Trusted Advisor Service and alert DevOps team using SNS Topic when the service usage reached to warning (50%) and critical (80%) to increase the service limit capacity.
- Wrote cloud custodian policies to auto tag all AWS resources key as creator name value as IAM user who created the resource, sends them email if they didn't follow security best practices. For Instance, security group ingress has o.o.o.o/o custodian immediately sends email to creator and auto deletes the rule.
- Designed & implemented VPC service for extension of customer's on-premises data center with AWS Cloud using AWS VPC and VPN & Direct connect services.
- Used CloudFront to deliver content from AWS edge locations to users, allowing for further reduction of load on front-end servers.
- Written helm templates and packaged, deployed helm charts as part of CI/CD process into the PKS Clusters.
- Parameterize helm templates using helm functions and conditional statements to deploy one helm chart to Dev, QA, UAT and Prod clusters.
- Written Kubernetes yaml manifests to deploy scale, load balance, scale and manage docker containers with multiple namespaces for PKS Clusters.
- Build application using Jenkins's server and troubleshoot build and release job failures, resolve, work with engineering team on resolution

Environment: AWS, Cloud Formation, Service Catalog, Jenkins, Ansible, IAC, CI/CD, Docker, ECS, Kubernetes, Helm Terraform, Maven, Ant, SonarQube, Packer, Github Actions, Harness, Datadog, Python, Shell, WebLogic, DynamoDB, Windows, ELK, Github actions, Git, SVN, Linux, Nexus, Agile Methodologies.

American Express, AZ, USA

Sep 2023 – March 2024

Azure DevOps/ Site Reliability Engineer

Responsibilities:

- Written Templates for Azure Infrastructure as code using Terraform to build staging and production environments.
- Managed Azure Infrastructure Azure Web Roles, Worker Roles, VM Role, Azure SQL, Azure Storage, Azure AD Licenses, Virtual Machine Backup and Recover from a Recovery Services Vault using Azure PowerShell and Azure Portal
- Expertise in Architecting and Implementing Azure Service Offering, such as Azure cloud services, Azure storage, IIS, Azure Active Directory (AD), Azure Resource Manager (ARM), Azure Storage, Azure, Blob Storage, Azure VMs, SQL Database, Azure Functions, Azure Service Fabric, Azure Monitor, and Azure Service Bus.
- Hands-on experience on Backup and restore Azure services and in Design and configure Azure Virtual Networks (VNETs), subnets, Azure network settings, DHCP address blocks, DNS settings, security policies and routing.
- Integrated Azure Log Analytics with Azure VMs for monitoring the log files, store them and track metrics and used Terraform as a tool, Managed different infrastructure resources Cloud, VMware, and Docker containers.
- Performed bulk load of JSON data from s3 bucket to snowflake.
- Used Snowflake functions to perform semi structured data parsing entirely with SQL statements.
- Configured Ansible to manage AWS workflow environments GCP and automate the build process for core AMIs used by all application deployments including Auto scaling, and Cloud formation scripts.
- Managed Azure Infrastructure Azure Web Roles, Worker Roles, VM Role, Azure SQL, Storage, Azure AD Licenses, Virtual Machine Backup and Recover from a Recovery Services Vault using Azure PowerShell and Azure Portal.
- Performed migration setup from SVN to GIT using BitBucket

- Designed Stacks using Amazon Cloud Formation and GCP templates to launch AWS Infrastructure (PaaS, IaaS, FaaS & SaaS) and resources. Developed AWS Cloud Formation templates to create custom sized VPC, EMR, DynamoDB, subnets, EC2 instances, ELB and security groups.
- Played a key role in automating the deployments on AWS and GCP using GitHub, Terraform, Puppet, Chef and Jenkins.
- Implemented Atlassian Stash along with GIT to host GIT central repositories for source code across products, facilitate code reviews and login audits for Security Compliance.
- Hands-on Experience on GIT and SVN to help manage and document all the changes to Application code and Configuration Management Code and having strong experience on source control concepts like Branches, Masters, Merges and Tags.
- Created Snowflake Schemas by normalizing the dimension tables as appropriate and creating a Sub Dimension named Demographic as a subset to the Customer Dimension.
- Experience in Administration/Maintenance of source control management systems, such as SubVersion, Bitbucket and Git.
- Deploying applications using Jenkins server and Troubleshoot build and release job failures, resolve, work with engineers on the resolution.
- Conceived, Designed, Installed and Implemented CI/ CD automation system. Created and updated Bash scripts and modules, files, and packages.
- Maintained Artifacts in binary repositories using JFrog Artifactory and pushed new Artifacts by configuring the Jenkins project Jenkins Artifactory plugin.
- Deploying Windows Kubernetes (K8s) cluster with Azure Container Service (ACS) from Azure CLI and Utilized Kubernetes and Docker for the runtime environment of the CI/CD system to build, test and Octopus Deploy.
- Wrote shell scripts to handle server processing migrating applications from .Net to Python monitoring applications and server performance with Splunk and Jenkins.
- Using Ansible created multiple playbooks for machine creations and SQL server, cluster server and my SQL installations.
- Implemented Docker -maven-plugin in Maven pom.xml files to build Docker images for all microservices and later used Docker files to build the Docker images from the java jar files.
- Manage deployment automation using Chef and Custom Chef Modules.
- Worked in highly collaborative operations team to streamline the process of implementing security Confidential Azure cloud environment and introduced best practices for remediation
- Created Azure services using ARM templates (JSON) and ensured no changes in the present infrastructure while doing an incremental deployment.
- Worked with Nagios for Azure Active Directory & LDAP and Data consolidation for LDAP users. Monitored system performance using Nagios, maintained Nagios servers, and added new services & servers.

Environment: Azure, Office 365, Git, GitHub, Azure AD, Terraform, Maven, Jenkins, Docker, Kubernetes, Python, Shell Scripting, PowerShell, JFrog Artifactory, LDAP, Nagios, Ansible, Python, Linux, Maven, My SQL, Jenkins, Apache Tomcat 7.x, Docker, Virtualization, Kubernetes, ELK, Datadog, LDAP, JDK1.7, XML, Git.

JP Morgan Chase, NYC

Apr 2019 – Sep 2023

DevOps

Engineer

Responsibilities:

- Worked on AWS and google cloud platform (GCP) services like EC2, lambda, VPC, compute engine, cloud load balancing, cloud storage, cloud SQL, stack driver monitoring and cloud deployment manager.
- Setup GCP Firewall rules to allow or deny traffic to and from the VM's instances based on specified configuration and used GCP cloud CDN (content delivery network) to deliver content from GCP cache locations drastically improving user experience and latency.
- Worked on GKE Topology Diagram including masters, slave, RBAC, helm, kubectl, ingress controllers GKE Diagram including masters, slave, RBAC, helm, kubectl, ingress controllers
- Created projects, VPC's, Subnetwork's, GKE Clusters for environments QA3, QA9 and prod using Terraform

- Worked on Jenkins file with multiple stages like checkout a branch, building the application, testing, pushing the image into GCR, Deploying to QA3, Deploying to QA9, Acceptance testing and finally Deploying to Prod
- Setting up and configuring Kafka Environment in Windows from scratch and monitoring it.
- Deployed and monitored scalable infrastructure on Amazon web services (AWS) and configuration management instances and Managed servers on the Amazon Web Services (AWS) platform using Chef configuration management tools and Created instances in AWS as well as migrated data to AWS from data Center.
- Involved in design and deployment of a multitude of Cloud services on AWS stack such as EC2, Route53, S3, RDS, DynamoDB, SNS, SQS, IAM, while focusing on high-availability, fault tolerance, and auto-scaling in AWS CloudFormation
- Developed strategy for cloud migration and implementation of best practices using AWS services like database migration service, AWS server migration service from On-Premises to cloud.
- Provisioned the highly available EC2 Instances using Terraform and cloud formation and wrote new python scripts to support new functionality in Terraform.
- Efficiently Worked with all of the following tools/Instances but not limited to including: Kafka, Zookeeper, Console Producer, Console Consumer, Kafka Tool, File Beat, Metric Beat, Elastic Search, Logstash, Kibana, Spring Tool Suite, Apache Tomcat Server etc.
- Designed AWS Cloud Formation templates to create custom sized VPC, to set up IAM policies for users, subnets, NAT to ensure successful deployment of Web applications, database templates and Security groups
- Managed Docker orchestration and Docker containerization using Kubernetes. Used Kubernetes to orchestrate the deployment, scaling, and management of Docker Containers
- Created and deployed Kubernetes pod definitions, tags, labels, multi-pod container replication. Managed multiple Kubernetes pod containers scaling, and auto-scaling.
- Configured different artifacts to make an image and deploy Docker image to install the application on an instance, maintain and troubleshoot for any user issues or network problems
- Worked on Docker-Compose, Docker-Machine to create Docker containers for testing applications in the QA environment and automated the deployments, scaling and management of containerized applications
- Installed and Implemented Ansible configuration management system. Used Ansible to manage Web applications, Environments configuration Files, Users, Mount points, and Packages also Worked with automation/configuration management using Ansible and created playbooks in YAML to automate the development processes.
- Implemented Infrastructure automation through Ansible for auto-provisioning, code deployments, software installation and configuration updates.
- Added required images to Vagrant and create servers out of Images for testing and Automated infrastructure build-out and systems provisioning using Ansible and Ansible Tower
- Designed fully automated server build management, monitoring, and deployment by Ansible playbooks using Ansible role created an ELK cluster for non-log purposes to search and analyse product and pricing data.
- Creating a backup for all the instances in Kafka Environment.
- Worked with the development team to generate deployment profiles (jar, war, rar) using ANT Scripts and Jenkins
- Working on writing Jenkins built a pipeline with Gradle script and Groovy DSL (Domain Specific Language) and integrating ANT/MAVEN build scripts with Gradle for the sole purpose of continuous build.
- Built and maintained ELK stack to centrally collect logs that are used to monitor applications also Installed, monitored and configured Applications in Nginx and Apache Tomcat Server and establish connectivity to databases and troubleshoot issues on the fly.
- Created Pre-commit hooks in Perl/shell/bash for authentication with JIRA-Pattern Id while committing codes in SVN, limiting file size code and file type and restricting development team to check-in while code commit
- Working Knowledge of databases like MySQL, RDS, DynamoDB, and MongoDB
- Good understanding of the principles and best practices of software configuration management (SCM) in agile, scrum and waterfall methodologies.
- Worked on writing multiple Python, Ruby, and Shell scripts for various company wide tasks
- Well versed with Software development (SDLC), Test life cycle (STLC), and Bug life cycle and worked with testing methodologies like a waterfall and the agile methodology (SCRUM) with an in-depth understanding of the

principles and best practices of Software Configuration Management (SCM).

Environment: AWS, AWS Connect services, EC2, RDS, ELB (Elastic Load Balancing), Spring boot, Java, S3, Cloud watch, Cloud Formation, Route53, Lambda, MAVEN, Nexus, Chef, Terraform, Jenkins CI/CD, Nagios, Jira, SHELL, Python, VPC, Autoscaling, Apache, JBoss, Nginx, Tomcat, GIT, Docker, Kubernetes, GCP, Service now, Cassandra, Blue/green deployment.

McKesson Specialty Health, Virginia

Dec 2017 – Mar 2019

DevOps Engineer/AWS Developer

Responsibilities:

- Promoted Continuous Integration, Continuous Delivery (CI/CD) culture collaborating with Development, DBA, QA, Support and Business Operations.
- Configures new citrix infrastructure components after installation.
- Installed and configured RHEL 7.x systems in large scale VMware virtual environment and Amazon cloud.
- Installed custom software and applications on various systems.
- Upgraded RHEL servers to latest release and applied RHEL OS enhancement and bug fixes as per business needs.
- Investigation of issues found in the production environment. Apache Tomcat configuration and support for other teams within IT.
- Installed and Configured apache, IIS Plug-ins for WebLogic.
- Experience with centralized version control systems such as Subversion (SVN) and distributed version control systems such as Git.
- Automated the migration of Subversion (SVN) repositories to Git while preserving the commit history and other metadata like branches, tags and authors.
- Good experience in installation/upgradation of VMware ESXi
- Experienced with the VMware HA, FT, DPM, and VMware DRS
- Automated Linux production server's setup using Puppet Scripts. Used these scripts to replicate production build environments on a local dev box using vagrant and Virtual Box.
- Experience on DevOps tools such as Chef, Vagrant, Puppet, Ansible, Jenkins, Maven, GIT, and Docker.
- User account management, worked with Perl, shell scripting (bash) to automate administration tasks.
- Developed non-functional HTML/5, CSS3 pages from the mock ups and involved in UI review with UI architect and Business Units.
- Redux is used as a data store for the UI layer.
- Construct Puppet Modules/Functions to Support Solaris IPMP (IP Multipathing) on Solaris.
- Using ANT, Puppet/ Chef Scripts with Ivy to build the application and deploy.
- Developed audio and video processing software. (Groovy)
- Served as the lead PowerShell developer in hundreds of Windows based migration and automation projects
- Authored several scripts leveraging VMware's PowerCLI and Windows PowerShell to aid with capacity planning and monitoring of the virtualization infrastructure.
- Based on provided OU and Group Policy design strategy, implemented scalable automation using Windows PowerShell for creating the AD structure for new sites and locations, allowing for significantly increased efficiency and accuracy
- Setting up and configuring Nagios, improved monitoring in Nagios and custom plugins.
- Implemented Nagios core/XI for monitoring Infrastructure resources.
- Set up customized monitoring with Nagios, & PNP4Nagios Graphs for the legacy and new environments.
- Automated Nagios services for database server, web-server, application-server, networks, file sizes, RAM utilization, Disk performances using Python script in Chef.
- Developed Shell/Perl Scripts for Automation purposes.
- Created nightly builds with integration to code quality tools such as SonarQube, Veracode.
- Created quality gates in SonarQube dashboard and enforced in the pipelines to fail the builds when conditions not

met.

- Implemented Goliath monitoring for Citrix XenApp & NetScaler.

Environment: RHEL, Apache-Tomcat, Git, Chef, VMWare, Vagrant, UI, Puppet, Groovy, GCP, Rational Doors, Chef, Jenkins, PowerShell, Nagios, Ansible, Oracle, TFS, JIRA, Shell/Perl Scripts, SonarQube, Netscaler

GE Vernova, India

Nov 2014 – Aug 2017

DevOps / Build & Release

Engineer Responsibilities:

- Build, manage, and continuously improve the build infrastructure for software development engineering teams including implementation of build scripts, continuous integration (CI) infrastructure and deployment.
- Developed and supported the Software Release Management and procedures. Worked on version control tools like GIT, Github and integrated build process with Jenkins.
- Worked with GIT, Github to manage source code.
- Work with development/testing, deployment, systems/infrastructure and project teams to ensure continuous operation of build and test systems.
- Implementing Chef Cookbooks for OS component configuration to keep AWS server's template minimal.
- Setup and maintenance of an automated environment using Chef Recipes & Cookbooks for different applications. Written cookbooks for installing Jenkins, HTTPD, WebLogic, JBoss, WebSphere, JDK.
- Converting production support scripts to Chef Recipes and AWS server provisioning using Chef Recipes.
- Orchestration of application processes on different environments using Chef in cloud (AWS) for deployment on multiple platforms.
- Integration of Automated Build with Deployment Pipeline and installed Chef Server and clients to pick up the Build from Jenkins repository and deploy in target environments.
- Created Shell & Python scripts for various Systems Administration tasks to automate repeated processes.
- Developed a continuous deployment (CD) pipeline using Jenkins, shell scripts.
- Troubleshoot problems arising from Build failures and Test failures.
- Deploy the code on web application servers like Apache Tomcat/WebSphere.
- Designed a process for pro-automation using Jenkins in all the application environments and making sure it follows all the standard procedures of the Application SDLC.
- Automated the continuous integration and deployments using Jenkins. Built end to end CI/CD Pipelines in Jenkins to retrieve code, compile applications, perform tests and push the build artifacts.
- Created and maintained Ant build.xml and Maven Pom.xml for performing the builds.
- Defined dependencies and plugins in Maven pom.xml for various activities and integrated Maven with GIT to manage and deploy project related tags and servers and Splunk to capture and analyse data from various layers Load Balancers, Web servers and application servers.Used JIRA for project management and issue tracking.

Environment: AWS, Linux, GIT, Github, Jenkins, Chef, Splunk, Maven, Shell script, Python, Apache Tomcat WebSphere, Windows, Ubuntu, RHEL, CentOS, JIRA, Linux.

Intex Technologies, India

May 2013 – Oct 2014

Linux Administrator

Responsibilities:

- Created and maintained user accounts in Redhat Enterprise Linux (RHEL) and other operating systems.
- Troubleshooting and maintaining of TCP/IP, Apache HTTP/HTTPS, SMTP and DNS applications.
- Configuration of NIS, DNS, NFS, SAMBA, SENDMAIL, LDAP, TCP/IP, Send Mail, FTP, Remote access Apache Services on Linux & UNIX Environment.
- Migrated different projects from Perforce to SVN
- Diagnosed and resolved problems associated with DNS, DHCP, VPN, NFS, and Apache.
- Created Bash/shell scripts to monitor system resources and system maintenance.
- Installed and monitored Splunk Forwarders on Windows, UNIX, and LINUX servers.

- Used XML, Advanced XML and Search Processing language (SPL) for creating Dashboards, views, alerts, reports and saved searches.
- Responsible for the basic administration tasks related to LDAP and WebSphere Portal.
- Worked in Server builds and automating the provision of OS by using Jumpstart for Solaris and Kickstart for Redhat (RHEL).
- Installed and configured servers using Redhat Linux Kickstart method.
- Worked in remote access and application virtualization technologies such as XEN, VMware, ESX, ESXi, etc on Linux.

Environment: RHEL, Windows, Shell Script, VMware servers, XEN, ESX, ESXi, WebSphere, Perforce, Splunk Enterprise Server 5.x, SVN, Windows 2003 server, Kick Start, Solaris.
