
ISLOMBEK ABDULAKHATOV

LOCATION: CA | EMAIL: ISLOMBEKABDULAKHATOV16@GMAIL.COM | PH: 650-606-1190

Summary

- **Around 5 years** of experience, as an **iOS and Software developer** in designing, developing, implementing and testing.
- Built Rich User Interface applications, integrating with various Databases and Client - Server applications in iPhone/iPad, Windows platforms.
- Extensive experience in machine learning, signal processing, and time-series data analysis to power novel use cases and applications.
- Proficient in multi-threaded programming and embedded systems development, with demonstrated ability to build high-performance implementations of deep learning algorithms.
- Application development using **Swift, SwiftUI, Python and Qt, AI&ML**
- Strong working knowledge of **XCode, Swift, SwiftUI, iOS and Windows UI**.
- Designed and implemented comprehensive UI automation test suites using **XCTest and XCUITest** to validate core app functionalities.
- Successfully integrated **CloudKit** to enable real-time data synchronization across devices.
- Adopted **CardDAV** protocol for seamless bidirectional synchronization of contact data between iOS apps and remote servers.
- Experienced in **UIAutomation**, Accessibility Testing, **CI/CD Integration for UI Tests**, Writing **Modular** and **Reusable Test** Cases.
- Concentrated on Mobile and Desktop application development for **iPhone & iPad** using **Swift** and **SwiftUI**
- Good understanding of Memory Management: ARC and non-ARC in **app development**
- Experience with **SQLite, CoreData and SwiftData**.
- Constructed and implemented UI designs using Storyboards with Auto Layout constraints, XIB files, and programmatically following Apple's iOS Human Interface Guidelines
- Expert in Object Oriented Programming with experience implementing MVC, KVO, and Singleton architectures
- Familiar with implementations using **AV Foundation** for playing/streaming content as well as barcode scanning
- Worked extensively on **X Code**, Interface Builder and Instrument
- Strong at using the third-party frameworks effectively
- Experience working in an Agile/Scrum team environment and pair programming
- Good understanding of the all phases of Software Development Life Cycle (SDLC) including Strategic Systems Planning, Analyzing, designing, Implementing and Maintaining
- Quick learner, and able to adapt to work in fast-paced result-oriented environments consistently delivering high quality work

Skills

Languages:	Swift, C++, C, Java, Python, HTML5, CSS, JavaScript, Kotlin.
Libraries/Frameworks:	React.JS, Typescripts, UIKit, Cocoa, Core Data, Combine, AVFoundation
Databases:	MySQL, SQL server and MongoDB
Tools:	Git, GitHub, Bitbucket, Visual studio, VS Code with IDEs, XCode, Qt
Machine Learning	On-device ML, signal processing, deep learning algorithms
Others:	Scrum master, Problem solving, Critical thinking, Creativity, Time management, Team work. Data Science, Structure and Algorithms,
Operating System:	Windows and Mac OS

Education

BSs (Computer Science)
San Francisco State University (2022)

BSs (School of Computer and Software Engineering)
INHA University in Tashkent (2021)

Experience

AORTA, CALIFORNIA

Software Developer, iOS

Aug 2024 - Current

- Designed and developed robust **iOS** applications with a focus on integrating **AI**-driven disease detection models to enhance healthcare solutions.
- Created modular, reusable components in **Swift** for improved scalability and maintainability of **iOS** applications.
- Developed seamless end-to-end connections between **AI** models and **iOS** applications, ensuring efficient data flow and real-time prediction capabilities.
- Implemented advanced **UI** automation tests using **XCTest** and **XCUITest** to validate app functionalities, achieving **95%** test coverage.
- Created modular, reusable components in **Swift** for improved scalability and maintainability of **iOS** applications.
- Integrated **machine learning models** into an **iOS** application to provide real-time disease detection capabilities in a user-friendly interface.
- Enhanced app performance and reduced crashes through rigorous performance testing and debugging using Xcode tools.
- Collaborated with cross-functional teams to integrate **RESTful APIs** and process model predictions into app workflows.
- Spearheaded the integration of **AI** models, reducing disease detection time by **50%** compared to traditional methods.
- Documented the development process, including methodologies, code, and results, ensuring reproducibility and transparency.
- Built, trained, and fine-tuned deep learning models using frameworks such as **TensorFlow**, **PyTorch**, and **Keras**. Utilized **Google Colab** for cloud-based development, enabling collaborative experimentation and resource-efficient model execution.

BANK OF AMERICA, CALIFORNIA

Software Developer, iOS

Jan 2023 - Aug 2024

- Worked on migration from old platform to new platform for **Bank of America** application.
- Proficient in designing, developing, and maintaining iOS applications from concept to deployment.
- Strong knowledge of the **iOS SDK**, **Core Data**, **UIKit**, **CloudKit** and other essential frameworks.
- Experienced in implementing **RESTful API** integration and working with backend developers to create seamless app experiences.
- Designed and implemented comprehensive **UI automation** test suites using **XCTest** and **XCUITest** to validate core app functionalities.
- Solid understanding of software architecture and design patterns, including **MVC**, **MVVM**, and **VIPER**.
- Skilled in optimizing app performance, memory management, and troubleshooting to deliver top-notch user experiences.
- Migration from old platform to new platform of the **largest BofA application**.
- Debugging using breakpoints and paying attention to details.
- Leverage information exchange platforms such as Stack Overflow to fix issues I have not encountered yet.
- Use **Bitbucket** for integration of code/features I work on.
- Improve the speed and functionality of the application.
- **MVVM code refactoring**: Pass data between Views, make sure that objects have only one source of truth, implement View Models for better readability, and, separate models from views. Work on having the views only contain view-related code as much as possible.

UBER, CALIFORNIA
Software Developer, iOS

Jul 2022 - Nov 2022

- Sign in with Apple and Google - 1. Added Firebase to the **XCode** project using **SPM**, 2. Followed documentation and, research to accomplish authentication functionality
 - Debugging - 1. Debugging using breakpoints and paying attention to details. 2. Leverage information exchange platforms such as Stack Overflow to fix issues I have not encountered yet
 - Use **GitHub** Pull Requests for integration of code/features I work on
 - Improve the speed and functionality of the application
 - Leveraged built-in and other libraries such as **RxSwift** for managing concurrency, multithreading and asynchronous actions.
 - Became familiar with List, Form, Navigation View, **@State**, **@Published**, **@State Object**, **Tab View**, and **Environment Key**
 - **MVVM** code refactoring - 1. Pass data between Views, make sure that objects have only one source of truth, implement View Models for better readability, and, separate models from views. 2. Work on having the views only contain view-related code as much as possible
 - Design - 1. Worked closely with company owner designing the App using **Figma** and **iOS Human Interface Guidelines**
 - Interacted with **RESTful API's** for fetching and posting data.
 - Used **UIKit** and occasionally **Swift UI** for user interface structure design frameworks.
- Worked in **Agile Scrum** methodology with two-week sprint

BCBS, CALIFORNIA

IOS Developer (Intern.)

Oct 2020 - May 2022

- Participated in Scrum meetings along with developers, testers, product owners to deliver the right value of project and discuss the progress of the project in sprints
- Used **XCode** and Storyboards to develop the screens for the application using **MVC** design pattern
- Created and customized views, table views, tab bars and navigation bars which are some basic functionalities in a multi-view application
- Used **Map kit** and **Core Location** framework to enhance user find their destination of the nearest local store
- Converted code from **UIKit** to **SwiftUI** and **Combine** for existing and new functionalities
- Worked on creating all the banking operations in native using **Swift UI** and **Combine** as **PoC**
- Debugging issues at onsite whenever required using **XCode** and **GDB**
- Improve the speed and functionality of the application
- Used **UIKit** and occasionally **Swift UI** for user interface structure design frameworks.
- Interacted with **RESTful API's** for fetching and posting data.
- Implemented many core frameworks and APIs provided by apple and other developers such as Core Graphics and **URL Session** for their respective purposes.

HITIN Scientific Research Organization, Uzbekistan

Software Developer

Feb 2018 - May 2019

- Participated in Scrum meetings along with developers, testers, product owners to deliver the right value of project and discuss the progress of the project in sprints.
- Develop system architecture to streamline bandwidth and reduce downtime and lag for outside users.
- Created data and system solutions to enable 'TOR' (BioTechnology device for treatment of cancer) to communicate with computer and read and exchange information between TOR and computer.
- Collaborated with designers and development teams to design and implement simple interfaces in alignment with business goals while reducing training requirements and production errors.
- Met all individual development plan milestones on each project.
- Developed Software platforms to increase the efficiency of the technology.
- Responsible for leading various distributed software system projects.

Certifications

- Algorithms and Data Structures
- iOS & Swift - The Complete iOS App Development Bootcamp
- Artificial Intelligence A-Z™: Learn How To Build An AI
- IBM: Machine Learning

Projects

- Worked on development and implementation of TOR innovation medical device which used for treatment of cancer.
- Organizer - International Week of Innovative Ideas 2016, Tashkent
- Tashkent Volunteer - Google I/O 2016
- 2017 Sport Executive (2016 -2017) – INHA University in Tashkent Staff team
- API World / AI Dev World 2019, San Jose.
