

Manideep

Data Engineer | Cloud Data Engineer

Email: manideepde523@gmail.com

Phone: 518-500-6087

- 4+ Years of Experience with solid understanding of **Business Requirement Gathering, Business Process Flow, Business Process Modeling and Business Analysis.**
- I am certified at **AWS Solutions Architect–Associate**([Certification Link](#)) and **GCP Professional Data Engineer**([Certification Link](#))
- Experience in **database design and schema modeling, including normalization, indexing, and partitioning strategies.**
- Experience in using **AWS** services like **Lambda, RDS, Redshift, EC2, Athena, Cloud formation, Step Functions, and Quick Sight.**
- Implemented robust security practices with **AWS Identity and Access Management (IAM), Key Management Service (KMS), and Secrets Manager** to protect sensitive data.
- Utilized **Iceberg** and **Hudi** to implement ACID compliance for transactional data workflows and integrated with **AWS S3, EMR, and Glue**, enabling scalable, high-performance data lake solutions.
- Experience in managing and scaling containerized workloads using **Amazon ECS and Kubernetes (EKS)**, ensuring high availability and fault tolerance for distributed systems.
- Designed and deployed **AWS DMS** service for continuous data replication, supporting use cases like real-time analytics and data lake updates.
- Hands on Experience on **ETL/Data pipelines** to transform data and load from **AWS S3 to Snowflake and Redshift.**
- Hands-on experience in writing different **RDD (Resilient Distributed Datasets) transformations and actions using Spark and SQL.**
- Used **terraform** to deploy AWS services, developed terraform code for modules and resources.
- Expertise in **Continuous Integration (CI) and Continuous Deployment (CD) methodologies**, including knowledge of **CI/CD** tools such as **Jenkins and Concourse.**
- Having Knowledge in using Git-based platforms like **GitHub** and **GitLab** for source code management, including branching strategies and collaboration workflows.
- Having Hands on experience in developing **Gen AI solution** such as **text summarization, content generation, and sentiment analysis** in AWS cloud using **AWS Bedrock model.**
- Solid experience in building **Data Lake** and **Data Warehouse** using **AWS** and **Google Cloud.**
- Having Good amount of Knowledge in **GEN AI** Data engineer Services like **Document AI, Vector AI, and Alloy DB.**
- Built batch and streaming pipelines using **GCP services like Cloud Storage, BigQuery, Cloud Composer, Pub/Sub, Cloud Monitoring, Cloud Functions, and Data Proc.**
- Leveraged Gen AI Solutions to track, analyze, and compare different model's response using models like **Text-Bison, Gemini 1.5 Pro , Gemini 1.0 Pro** etc.

Skill Matrix:

Overall, Skills:

Scripting and Programming language	SQL, Python, Spark,
Cloud Providers	AWS, GCP
Container Services	Docker and Kubernetes
Orchestration tools	Airflow, Cloud Composer, Step Function
Data warehouse Services	Redshift, Big Query, Snowflake
Infrastructure as Service	Cloud Formation, Terraform

Python Libraries :

Cloud SDK's	Boto3, gcloud
Pyspark Libraries	MLlib, pyspark.SQL, Streaming, GraphX, PyArrow
Data Manipulation	Pandas, NumPy, Polars, Dask
Database Interaction	SQLAlchemy, psycopg2, boto3, Requests
Web Frameworks	Flask, Django
Testing	PyTest, unittest, Mock.
Data Serialization	JSON, Toml, XML

Professional Experience:

Client: JPMorgan Chase

Jan 2024 – TILL DATE

Role: Cloud Data Engineer

About Project:

Designed and deployed various scalable cloud-based data solutions like Data Lake, Data Mart and Data Warehouse using AWS Cloud. I have contributed to building ACID based data pipelines used for Analytics and helped to make some crucial real-time decisions. Also, I have built and supported Machine Learning, Data Sciences and AI teams with required data for their process.

Built many reusable code bases which later converted as libraries and used internally across the enterprises. Onboarded new technologies and shared them across the department.

Responsibilities:

- Utilized **Agile software development** methodology for problem definition, requirement gathering, and business modeling.
- Collaborated with project team members to deliver **data models** meeting enterprise standards.
- Used **Python scripting** for automation tasks, data manipulation, and integration with various AWS services

- Developed **ETL pipelines** using **Python, Pyspark and AWS Glue** to extract, transform, and load data into AWS data warehouses.
- Created **Data Frames** and performed analysis using **Spark SQL** and used **RDD and DF APIs** to access variety of data sources using **Scala, PySpark, Pandas and Python**
- Built batch and streaming pipelines using **AWS services like S3, RDS, RedShift, Lambda, Glue, EMR, Ec2, Athena, Step Functions, CloudWatch, SageMaker, IAM roles, QuickSight** and many other services
- Integrated **Hudi with Apache Spark** to optimize **ETL pipelines**, reducing processing times and enhancing efficiency.
- Experience with **AWS Database Migration Service (DMS)** for seamless data migration and replication between on-premises and cloud-based databases.
- Implemented data validation tasks post-migration to verify data accuracy and consistency between **RDS and Redshift**.
- Configured **Hudi** for optimized **data ingestion** into **S3**, ensuring efficient storage and retrieval of high-volume data.
- Analyzed large and critical datasets using **EMR, Glue and Spark**.
- Created reports and dashboards using **AWS services like Lambda, Glue, Step Function and QuickSight**.
- Developed and deployed **Kubernetes** to extract, transform and load data.
- Used **Docker** and **Kubernetes** for Data Pipelines and ETL Pipelines.
- Used **terraform** to deploy **AWS services**, developed **terraform** code for modules and resources.
- Integrated **Bitbucket with CI/CD** pipelines to automate build, test, and deployment processes, enhancing development efficiency and software quality.
- Utilized **Bedrock AI** for advanced natural language processing tasks, including large-scale document analysis and extraction.
- Managed scalable **data ingestion** workflows with **Hudi**, seamlessly handling both **batch** and **streaming data**.

Client: RAY TECH IT SERVICES LLC

Jan 2023-Dec 2023

Role: Gen AI Data Engineer

About Project:

In Enterprise Data Analytics team, I was part of supporting their customers to build quicker POC to onboard new technologies for their requirement. Our team collaborates and understands the requirements, then designs and develops Gen AI solutions by creating batch and streaming data pipelines using cloud Services, build monitoring solutions to track pipelines and applications performances. I have used Most of the GCP Services related to Data Engineer understanding in depth usability.

Responsibilities:

- Collaborated on building reliable Big Data infrastructure using **Spark** and container services.

- Integrated GCP services for seamless data storage, retrieval, and real-time processing.
- Utilized GCP services like **Big Query, Dataflow, Pub/Sub, Cloud Function, and Cloud Storage** for dataprocessing.
- Implemented monitoring solutions for GCP services using **CloudWatch** and relevant tools.
- Having Good amount of Knowledge in **Vector Embeddings** and **GEN AI** Data engineer Services like **Document AI, Vector AI, Cloud Storage and Alloy DB**.
- Utilized GCP services like **Document AI** with different **Parsers** for extraction of data from **PDF's** file format.
- Used **Document AI** to extract structured data from unstructured documents, enabling better data analysis and insights.
- Used **Vertex AI model** with **embedding Model** to generate **Embedding Vectors** for the given extracted text.
- Integrated **Alloy DB** for loading **Embedding Vectors** for faster retrieval and data processing
- Having good amount of knowledge in **Gemini AI models** for Prompt engineering
- Leveraged Vertex AI Experiments to track, analyze, and compare different model's response using models like **Text-Bison, Gemini 1.5 Pro , Gemini 1.0 Pro** etc.
- Implemented **chunking** techniques to handle large text data efficiently, facilitating better data processing and analysis.
- Leveraged **RAG for GEN AI tasks** such as **summarization and question-answering**, to enable the model to pull relevant information from structured and unstructured data sources, ensuring more accurate and useful results.

Client: Cognizant Technology & Solutions

Dec 2020 – July 2022

Role: Data Engineer

About Project:

As part of the Platform Enhancement Team, I am responsible for developing and enhancing self-service applications leveraging cloud services to streamline operations and improve the user experience. Our team focuses on designing and building both batch and streaming data pipelines, empowering users to manage and process data independently. We ensure the scalability, reliability, and automation of these solutions by utilizing a range of cloud services, especially from GCP Cloud.

Responsibilities:

- Built self-service data pipelines on GCP using services such as **Cloud Pub/Sub, Cloud Dataflow, Cloud Functions, DataProc, Compute Engine, Big Query, Data Studio**.
- Transferred large datasets from **GCP Cloud Storage** to **Big Query** using **Dataflow** and **DataProc**.
- Analyzed large datasets using **Dataflow, and Apache Spark**.
- Developed real-time processing and core jobs using Apache Beam with **Pub/Sub** as a data pipeline system.
- Coordinated oversight monitoring activities using **GCP's Data Studio** for visualization.
- Created ETL pipelines in and out of data warehouse using **Python** and **GCP Dataflow**

- Implemented **Spark** using **Python** and **Spark SQL** for data processing.
- Used Spark and Spark SQL to read Parquet data and create tables in **Big Query** using **Python** API.
- Built **CI/CD** pipelines for testing and production environments using Cloud Build and Terraform.
- Proficient with container systems like **Docker** and **container** orchestration with **Google Kubernetes Engine (GKE)** and worked with **Terraform** for infrastructure management.
- Conducted POCs with **Apache Spark** using **Python** for GCP projects.
- Developed and optimized SQL queries for data retrieval and manipulation in various data warehousing environments like **Big Query** and **Redshift**
- Used **Python** scripting for automation tasks, data manipulation, and integration with various **GCP services**.
- Collaborated with cross-functional teams to design and implement data solutions using GCP and **Python, Spark**

Client: Pramati Technologies Private Limited

Dec 2019 – Nov 2020

Role: Big Data Engineer

About Project: As part of the Data Enablement Team, we focus on designing and implementing end-to-end data pipelines that support both batch and real-time data processing. Our primary responsibility is to transform raw data into actionable insights by building scalable ETL processes, integrating various AWS services for efficient data flow management. Additionally, we leverage AWS QuickSight and other visualization tools to create interactive dashboards and detailed reports, enabling data-driven decision-making across the organization.

Responsibilities:

- Used **Agile software development methodology** in defining the problem, gathering requirements, development iterations, business modeling and communicating with the technical team for development of the system.
- Build Self-service data pipelines using AWS Services like, **SNS, Step Function, Lambda, Glue, EMR, EC2, Athena, Sage Maker, Quick Sight, Redshift** etc.
- Moved large amount of data from **AWS S3 buckets to AWS Redshift using Glue and EMR**.
- Developed **ETL pipelines** in and out of data warehouse using tools like **Python and AWS Glue**.
- Used AWS services like **AWS S3, AWS RDS and AWS Redshift for storage**.
- Created Data pipelines using AWS services like **S3, Glue, EMR, Lambda, Athena, IAM**, etc.,
- Created reports and dashboards that provide information on metrics, usage, trends, and behaviors using AWS services like **S3, Lambda, Athena, and Quick Sight**.
- Experienced in writing live Real-time Processing and core jobs using **Spark** Streaming with **Kafka** as a data pipe-line system.
