Summary

Full-Stack Python Developer with 4+ years of experience delivering scalable, secure, and cloud-native applications across Voice AI (Food Tech) and Financial Services domains. Specialized in Python (FastAPI, Flask), REST APIs, PostgreSQL, and containerized deployments with Docker & Kubernetes. Proficient in building modern, responsive frontends with React.js, Next.js, and Tailwind CSS. Adept at integrating backend and frontend systems, automating CI/CD pipelines, and optimizing application performance. Passionate about building user-centric platforms that drive measurable business impact in fast-moving environments.

Technical Skills

Frontend: React.js, Redux, Next.js, TypeScript, JavaScript (ES6+), Zustand, Styled Components, Tailwind CSS, Bootstrap, Material-UI, Vite, SASS/SCSS, Figma, Web Accessibility (WCAG)

Backend & APIs: Python (FastAPI, Flask, Django), RESTful APIs, GraphQL, WebSockets, gRPC, Microservices, Celery, Redis, Kafka, Webhooks, OAuth2, JWT, Node.js, Express.js, Bash, Shell Scripting, Java, Spring Boot, Async Programming

Databases & Data Engineering: PostgreSQL, MySQL, MongoDB, DynamoDB, Firebase, SQLite, Schema Design, Query Optimization, Redis Streams, Vector Databases, Pandas, NumPy, Apache Airflow, ETL Pipelines, Data Streaming

Cloud & DevOps: AWS (Lambda, EC2, RDS, S3, CloudFront, API Gateway, IAM, ECR, EKS), Azure, Docker, Kubernetes, Jenkins, GitHub Actions, GitLab, Terraform, Nginx, Prometheus, Grafana, ArgoCD, Linux, CI/CD Automation

Testing & Security: Pytest, Selenium, Postman, OpenAPI, React Testing Library, Cypress, Playwright, Unit & Integration Testing, JUnit, Mockito, SonarQube, Trivy, Snyk, OWASP, API Security

Other Tools & Methodologies: Git, Jira, Agile (Scrum/Kanban), Event-Driven Architecture, Design Patterns, Data Structures & Algorithms, Code Review Best Practices, Performance Tuning, Observability & Monitoring

Professional Experience

Software Engineer, VoicePlug AI

Sept 2024 – Present | Palo Alto, USA

- Engineered Python Django backend for voice-enabled food ordering, reducing average response latency by 28% and improving transaction throughput across peak service periods.
- Developed React.js partner dashboards enabling real-time menu and order management, ensuring seamless data synchronization with backend services and voice assistant integrations.
- Optimized PostgreSQL schema and queries, reducing retrieval time by 35% while supporting 100K+ daily orders with consistent low-latency access and performance reliability.
- Deployed modular microservices through Docker and Kubernetes, improving deployment speed, system resiliency, and scalability during dynamic traffic fluctuations and seasonal demand peaks.
- Integrated voice assistant APIs with responsive React.js interfaces to enhance personalized customer experiences, increase engagement rates across restaurant and delivery platforms, and automated Python-based order validation workflows reducing manual errors by 40%, standardizing operations, and ensuring accurate processing.

Software Engineer, LTIMindtree

May 2023 – Aug 2024 | Remote, USA

- Migrated legacy finance platform to Python Flask microservices and React.js frontends, improving scalability and reducing infrastructure operating costs by 32% overall.
- Architected secure APIs using OAuth2 and JWT authentication, enabling compliant access to sensitive financial datasets and aligning with global regulatory security requirements.
- Built AWS-based ingestion pipelines for transaction processing, enabling real-time analytics dashboards and supporting faster compliance reporting and operational decision-making processes.
- Automated CI/CD pipelines using Jenkins and GitHub Actions, reducing deployment cycles from two weeks to three days while maintaining zero downtime deployments.
- Partnered with DevOps and security teams to implement hardened infrastructure and identity controls, ensuring strong encryption and compliance with financial security standards.

Software Engineer, Genpact

Nov 2020 – Dec 2022 | Ahmedabad, India

- Delivered Python FastAPI backend systems for high-volume transaction processing, enabling secure, scalable handling of millions of financial transactions across critical business domains.
- Built React.js internal dashboards for monitoring and reconciliation, providing real-time insights and improving operational visibility for finance and compliance stakeholders.
- Integrated third-party payment and KYC APIs, enabling real-time settlements, secure account validations, and improved traceability for regulated finance ecosystems and institutions.
- Deployed containerized applications using Docker and GitHub Actions, improving deployment reliability, accelerating release cycles, and supporting multi-environment delivery pipelines effectively.
- Refactored Python modules to minimize performance bottlenecks and improve maintainability, ensuring stable operations during peak transaction loads and regulatory reporting cycles.

Education

Master of Science in Information System

Cleveland State University

Jan 2023 - Dec 2024 | Cleveland, USA

Bachelor of Technology in Information and Communication Technology

Dhirubhai Ambani Institute of Information & Communication Technology

Aug 2018 - May 2022 | Gujarat, India
