PROFESSIONAL SUMMARY:

- Around **7 years of IT experience** in **Analysis, Design, Development, Coding, Implementation, and Testing** of web-based and client-server multi-tier applications using **Java/J2EE technologies**.
- Experience in developing applications using Java/J2EE (Servlets, JSP custom tags, Struts, Spring, Hibernate, EJB's, Java Beans, JDBC, JMS, JSF), XML, JavaScript, HTML, Hibernate, Eclipse3.x, Tomcat6/7/8.0, WebLogic, Oracle and Unix Korn Shell Scripting.
- Expertise in building web applications using **Spring Boot, Spring Security, Spring MVC, Spring Data JPA, Spring Cloud, and Spring REST**.
- Proficient in **Core Java** (Java7, Java 8, 11) with strong knowledge of **Garbage Collection, Multithreading, Collections, Event Handling, and Generics**.
- Extensive experience in developing **RESTful APIs** and **SOAP-based web services**.
- Strong hands-on knowledge of modern frontend technologies: **React.js, Angular, JavaScript, HTML5, CSS3, Bootstrap, and AJAX**.
- Experience in using Core java for multithreading, serialization, Inheritance Encapsulation and Polymorphism.
- Expertise in **micro services architecture**, deployed using **Docker, Kubernetes, Jenkins, and AWS**.
- Experience in cloud services: **AWS** (S3, EC2, Lambda, RDS, DynamoDB), **Azure**.
- Proficient in database technologies: **Oracle, SQL Server, DB2, PostgreSQL, MongoDB, and Cassandra**.
- Strong skills in database programming with **SQL, PL/SQL, Stored Procedures, and Triggers**.
- Proficient in build tools like **Maven, Gradle**, and version control with **GitHub**.
- Proficient in developing serverless applications using **AWS Lambda, Azure Functions, or Google Cloud Functions**.
- Well Experienced in deploying and configuring applications onto application servers like Web Sphere, Web logic, JBOSS and Apache Tomcat.
- Knowledge on Build tool Jenkins with configuring check styles, Test coverage.
- Good experience and understanding on partition of Kafka messages and setting up the replication factors in Kafka Cluster and have also used Spring Kafka API calls to process the messages smoothly on Kafka Cluster setup.
- Advanced knowledge of implementing secure authentication and authorization.
- Used Kubernetes to orchestrate the deployment, scaling and management of Docker Containers.
- Excellent critical and analytical thinking, written and verbal communication skills, quick learning, rigid attention to detail and ability to work independently as well within a team environment.

TECHNICAL SKILLS:

Programming Languages: Java (7,8, 11, 17), Python, TypeScript, PL/SQL.

Web Technologies: HTML5, CSS3, JavaScript, jQuery, AJAX, ReactJS, Next.js, Angular (6-15), Node.js, Vue.js, Bootstrap, Tailwind CSS, JSON, TypeScript.

Databases: Oracle, SQL Server, MySQL, MongoDB, PostgreSQL, Redis, NoSQL Databases.

J2EE Technologies: Servlets, Struts, EJB 2.0, JSF, JDBC, JSTL, JNDI, JMS, RMI, Java Beans, JTA.

Web Services: JAX-WS (SOAP), JAX-RS (REST), REST API.

Application Frameworks: Struts (1.x/2.x), Spring (4/5/6), Spring MVC, Spring Boot, Spring Security, Spring Batch, Spring Cloud, Spring Data JPA, Hibernate, Micronaut.

Cloud Technologies: AWS, Azure, Google Cloud, Red Hat OpenShift.

Web/Application Servers: Apache Tomcat (6.x, 8.x), Kafka, IBM WebSphere (8.x), Oracle WebLogic, Red Hat JBoss EAP (7.x/8.x), Red Hat JBoss Web Server (JWS), Nginx, Service Mesh.

Version Control: Git, GitHub.

IDE: Eclipse, IntelliJ IDEA, Visual Studio Code, NetBeans, MyEclipse, PyCharm.

Design Methodologies: Agile, Scrum.

PROJECT EXPERIENCE:

Client: RBC Bank, Remote

Apr'24 – Till Date

Role: Java Full Stack Developer

Responsibilities:

- Participated in the full software development lifecycle, including requirement analysis, prototyping, interface implementation, unit testing, and maintenance using Test-Driven Development (TDD).

- Developed Microservices using Java, REST, and Spring Boot with Auto Configuration to enhance productivity.
- Very good experience in Core Java skills including Multithreading, Collections, and Garbage Collection.
- Application act as Consumer application which uses Spring Boot Kafka to Consume Upstream data.
- Consumed REST based Micro services with Rest template based on RESTful APIs.
- Converted a monolithic app to microservices architecture using Spring Boot using 12-factor app methodology. Deployed, Scaled, Configured, wrote manifest file for various Microservices in AWS.
- Designed, developed, maintained, and optimized software applications using advanced coding techniques, including Unit Testing and Code Reviews.
- Creating Typescript reusable components and services to consume REST API's using Component-based architecture provided by Angular 4 and Used Web pack to build Typescript modules.
- Analysed Business Requirements and System Specifications to enhance and modify applications as needed.
- Worked on complex web applications using Node JS, Java, Spring Boot, and modern frontend frameworks like Java Script, Angular.
- Implemented platform modules through spring Java micro and Node.js services by using front-end React JS.
- Extensive experience in Core Java (Multithreading, Collections, Garbage Collection).
- Developed RESTful APIs and integrated with enterprise systems on both the service and client sides.
- Hands-on experience with MongoDB, Apache Kafka, and AWS services (EC2, S3, EBS) for backend and cloud solutions.
- Designed containerized full-stack applications using Spring Boot (backend) and React/Angular (frontend), orchestrated via Kubernetes for high availability.
- Built automation scripts for JBoss installation, configuration, and deployment, supporting GitOps-based CI/CD workflows.
- Used AWS Load Balancers (ALB, NLB) to manage traffic.
- Implemented Microservices architecture using Spring Boot for making application smaller and independent.
- Deployed lightweight containers using Docker and set up scalable services in Kubernetes with Helm Charts.
- Automated infrastructure provisioning using Terraform, ensuring consistency in cloud environments.
- Designed responsive web pages using HTML5, CSS3, Bootstrap, Tailwind CSS, and Angular.

Client: Infosys, India

July'21 – Aug'23

Role: Sr Software Engineer

Responsibilities:

- Followed Scrum Agile methodology for iterative application development, participated in weekly Sprint stand-up meetings, and managed customer backlogs.
- Developed scalable Java 11/17 micro services using Spring Boot, Spring Cloud (Eureka, Config Server, Gateway), and Hibernate, enabling modular and fault-tolerant backend architecture to support millions of daily e-commerce transactions.
- Developed web pages using HTML5, CSS3, Angular 10, Bootstrap, JSON, and Ajax.
- Developed secure, high-performance RESTful APIs with Spring MVC integrated with OAuth2/JWT authentication, facilitating seamless communication between microservices, frontend clients, and third-party integrations.
- Developed REST Web Services using Spring Cloud, tested with SOAPUI and Postman.
- Experienced in Spring Framework applications like Spring Core, AOP, MVC, Batch, Security, and Spring Boot; integrated microservices into system architecture.
- Implemented asynchronous event-driven processing using Apache Kafka, improving system reliability and real-time order fulfilment while maintaining data consistency across distributed services.
- Maintained CI/CD pipelines using Jenkins, Docker, and Kubernetes, automating build, test (JUnit, Mockito), and deployment workflows on AWS EC2 and Azure DevOps, reducing release cycles by 50% and ensuring zero-downtime deployments.
- Implemented AWS solutions with EC2, S3, EBS, Elastic Load Balancer, Auto Scaling Groups, and CloudFormation Templates.
- Experienced in front-end systems using JavaScript, Bootstrap, HTML5, and MVC frameworks like AngularJS.
- Conducted backend performance tuning through JVM optimization, advanced SQL query tuning on MySQL/PostgreSQL, and load testing with JMeter, achieving a 40% reduction in API latency and enhancing overall system throughput.

- Ensured high code quality and maintainability using SonarQube for static code analysis, coupled with detailed API documentation via Swagger/OpenAPI, streamlining developer collaboration and accelerating feature delivery.
- Monitored application health and resolved production issues proactively using Instana APM, AWS CloudWatch, and the ELK Stack (Elasticsearch, Logstash, Kibana), resulting in a 35% improvement in service availability and customer experience.
- Developed APIs with AWS Lambda to manage servers and run code in response to events.
- Built applications using Spring MVC, JSP, Hibernate, and MySQL.
- Created CI/CD pipelines using Git, Maven, Jenkins, Ansible, Swagger, and Kubernetes.
- Managed environments using Docker for testing and deployment.
- Utilized Apache Kafka for reliable and asynchronous messaging across applications.

Client: Accellor Software Pvt. Ltd, India

Nov'18– July'21

Role: Java Developer

Responsibilities:

- Involved in Agile methodology (Scrum) from requirements gathering to system maintenance and optimization.
- Used Apache Tomcat for Java Platform, Enterprise Edition (Java EE) implementations.
- Designed and developed scalable microservices architecture using Java (JDK 8/11), Spring Boot, and Spring Cloud (Eureka, Config Server, Gateway), enhancing system modularity and resilience.
- Created secure, high-performance RESTful APIs with Spring MVC and Web Flux, implementing OAuth 2.0 and JWT-based authentication and RBAC for protecting sensitive customer and financial data.
- Built the front-end using HTML, JavaScript, ExtJs, and CSS.
- Implemented caching techniques, generated POJO classes for data storage, and DAOs to retrieve data.
- Work with REST APIs and WebSphere Commerce services for integrations with external systems
- Developed web services using Apache CXF and Spring Framework for artifact generation and JAX-WS configuration.
- Handled exceptions using Exception Handling to manage errors in services.
- Wrote SQL queries and stored procedures using Squirrel SQL Client v3.6.
- Used Jenkins for CI/CD to integrate and deploy code in production and staging environments; utilized JMS for automated notifications.
- Worked with Perforce for GIT and marshalled Ruby output.
- Used Maven for builds and JBoss EAP Server for deployment and service execution.
- Monitored Agile Product Lifecycle Management (PLM) to address defects from the testing team and oversee product development.
- Translated business requirements into technical design specifications.
- Conducted JUnit testing on developed web services.

EDUCATION:

University Of South Florida, **FL**

Aug'23– may'25

Master of Science, Computer System Analysis/Analyst

SRM Institute of Science and Technology, **Chennai**

july'15– may'19

Bachelor of Technology, Electronics and Communication Engineering
