PROFESSIONAL SUMMARY

- **Java Full Stack Developer with 8+ years of experience** in designing, developing, and deploying **cloud-native enterprise applications** across healthcare, finance, telecom, and media domains.
- Strong expertise in **Java (8/11/17)** including OOP, collections, concurrency, streams, and multithreading for building **high-performance APIs and microservices**.
- Proficient in **Python scripting and automation**, applying it for backend integration, data pipelines, testing frameworks, and DevOps workflows.
- Experienced in **AWS cloud-native application development**, including **EKS, ECS, Lambda, Aurora PostgreSQL, DynamoDB, S3, IAM, VPC, and Security Groups**.
- Skilled in **AWS infrastructure provisioning** using **Terraform and CloudFormation**, enabling repeatable, scalable, and secure environments.
- Hands-on experience with **event-driven architecture** using **Kafka (Confluent & AWS MSK)** for real-time messaging and system integration.
- Familiar with **cloud database technologies** including **Aurora, Cosmos DB, MongoDB, PostgreSQL, and Oracle**, with expertise in schema design, tuning, and optimization.
- Proficient in **CI/CD automation** with **Jenkins, GitLab, Azure DevOps, and Harness**, streamlining release pipelines and ensuring **zero-downtime deployments**.
- Strong background in **unit and integration testing** using **JUnit, Mockito, Rest Assured, PyTest, and Postman**, achieving high code coverage and reducing production defects.
- Implemented enterprise-grade **authentication and authorization protocols** including **SAML, OAuth 2.0, and JWT**, ensuring security and compliance.
- Skilled in **monitoring and observability** with **Datadog, Splunk, ELK Stack, AppDynamics, and Grafana**, proactively identifying and resolving performance bottlenecks.
- Adept in **troubleshooting, debugging, and bug fixing**, consistently improving stability and reducing downtime.
- Strong **DevOps and Git expertise**, implementing branching strategies, artifact management (JFrog, Nexus), and code quality checks (SonarQube).
- Experienced across the **full SDLC in Agile/Scrum environments**, participating in sprint planning, backlog refinement, daily standups, and retrospectives.
- Recognized for **improving application performance by 40%, reducing release cycle time by 60%**, and lowering operational costs via cloud migration.
- Collaborative leader with excellent **organizational, problem-solving, and communication skills**, mentoring junior engineers and bridging technical and business needs.
- Committed to **attention to detail** and delivering high-quality, production-ready solutions while continuously upskilling in **AI/ML-driven cloud automation**.

TECHNICAL SKILLS

Programming Languages	Java 8/11/17 (Core Java, OOP, Collections, Concurrency, Streams, Multithreading), Python (Scripting, Automation, Data Pipelines), JavaScript (ES6+), TypeScript, SQL, Bash Shell
Backend & Frameworks	Spring Boot, Spring Cloud, Spring Batch, Spring MVC, Spring Security, REST API Development, GraphQL Schema Design, Hibernate, JPA, Microservices Architecture, SOAP Web Services

Frontend	Angular 13+, Angular Material, Bootstrap, HTML5, CSS3, SCSS, RxJS, NgRx/Redux, Jasmine, Karma
Cloud & Containerization	AWS EKS, ECS, Lambda, Aurora PostgreSQL, DynamoDB, S3, VPC, IAM, Security Groups, API Gateway, CloudWatch, CloudFormation, Terraform, AWS MSK (Kafka), AWS App Services, AWS Logging & Monitoring
Databases	Oracle 12c, MySQL, PostgreSQL, MongoDB, Liquibase, Redis (Caching), Elasticsearch, SQL Optimization, Database Design & Performance Tuning
APIs & Messaging/Streaming	Postman, Apigee, Apache Kafka, RabbitMQ, JMS, ActiveMQ, Swagger (OpenAPI), SOAP UI
DevOps & CI/CD Tools	Git, GitHub, Bitbucket, GitLab CI/CD, Jenkins, Azure DevOps Pipelines, Harness, Maven, Gradle, JFrog Artifactory, SonarQube (Code Quality), Nexus Repository
Testing & Automation	JUnit, Mockito, Selenium, Rest Assured, Jasmine, Karma, Jest, K6 (Load Testing), Cucumber (BDD), TestNG
Monitoring & Logging	Splunk, ELK Stack (Elasticsearch, Logstash, Kibana), Grafana, AppDynamics, Application Insights, Prometheus, Kibana Dashboards
Methodologies & Practices	Agile/Scrum, Test-Driven Development (TDD), Object-Oriented Design (OOD), Design Patterns (Singleton, DAO, Factory, MVC)
Other Tools	Agile/Scrum, Test-Driven Development (TDD), Behavior-Driven Development (BDD), Continuous Integration/Continuous Deployment (CI/CD), Confluence, JIRA, Unix/Linux, Shell Scripting, IntelliJ IDEA, Eclipse, Visual Studio Code

PROFESSIONAL EXPERIENCE

Client: DaVita, Brentwood, TN

Sep 2023 - Present

Role: Full Stack Java Developer

Responsibilities:

- Designed and developed **Java 11 REST APIs and microservices** using **Spring Boot and Spring Cloud**, supporting patient care management and scheduling workflows.
- Built and consumed **GraphQL endpoints** to optimize data access and reduce over-fetching in patient applications.
- Modeled and optimized **NoSQL databases (MongoDB, Azure Cosmos DB)** and relational schemas in **PostgreSQL and Oracle** for high-performance queries.
- Implemented **event-driven processing with Apache Kafka and AWS MSK**, enabling real-time messaging and streaming across distributed systems.
- Developed **Spring Batch jobs** for large-scale healthcare data processing, reporting, and compliance workflows.
- Deployed applications to **AWS (EKS, ECS, Lambda)** using **Docker and Kubernetes**, automating infrastructure provisioning with **Terraform**.
- Automated CI/CD pipelines using **Azure DevOps and Jenkins**, integrating builds, tests, and deployments to achieve **zero-downtime releases**.

- Strengthened security by implementing **OAuth 2.0, JWT authentication, and MSFT Entra ID (Azure AD)** for role-based access control.
- Set up **observability and monitoring** with **Datadog, Splunk, Grafana, and Application Insights**, reducing incident response times by 30%.
- Troubleshoot, debugged, and optimized backend services, improving system performance and reducing production issues.
- Collaborated with business stakeholders, architects, and QA teams in **Agile/Scrum**, participating in sprint planning, daily standups, and code reviews.
- Authored **technical documentation** in Confluence to streamline knowledge sharing and onboarding.

Environment: Java 11, Spring Boot, Spring Cloud, Spring Batch, REST, GraphQL, Cosmos DB, PostgreSQL, Oracle, Kafka, AWS MSK, Docker, Kubernetes, AWS EKS/ECS/Lambda, Terraform, Azure DevOps, Jenkins, Datadog, Splunk, Grafana, OAuth2, MSFT Entra ID.

Client: DISH Network, Denver, CO - Remote

Apr 2021 – Jun 2023

Role: Full Stack Java Developer

Responsibilities:

- Designed and implemented full-stack features using **Java, Spring Boot, RESTful APIs, and SOAP services** for telecom applications.
- Built Angular (13+) applications with TypeScript, leveraging RxJS and NgRx for improved state management and performance.
- Created reusable Angular components, directives, and services, and optimized rendering with OnPush change detection and async pipes.
- Applied **Java 8+ features** such as **streams, lambdas, multithreading, and concurrency** for scalable backend services.
- Developed **CRUD microservices** with **Spring Data JPA and Hibernate** for persistence with **Oracle and MongoDB**.
- Implemented **event-driven architecture** using **Kafka**, ensuring faster and reliable communication between distributed services.
- Automated deployments with **GitLab CI/CD pipelines, Jenkins**, and containerization with **Docker**.
- Conducted testing with **JUnit, Mockito, and Jest** to ensure functionality across backend and frontend components.
- Applied observability practices with **Kibana, ELK stack**, and application monitoring tools for logs and metrics.
- Deployed code across environments (DEV, QA, STAGE, PROD) with zero-downtime releases.
- Enhanced **CRM systems** by optimizing backend APIs and UI flows, improving customer satisfaction.
- Worked closely with product owners and QA engineers, participating in **Agile ceremonies** and sprint demos.

Environment: Java 11, Spring Boot, REST/SOAP APIs, Angular, TypeScript, NgRx, Oracle, MongoDB, Kafka, Jenkins, GitLab CI/CD, Docker, ELK, Kibana, JIRA.

Client: Comcast, Philadelphia, PA - Remote

Mar 2019 – Feb 2021

Role: Full Stack Java Developer

Responsibilities:

- Developed enterprise-scale applications using **Java 8, Spring Boot, and Spring MVC**, applying **OOP and AOP principles**.
- Designed and consumed **RESTful and SOAP web services** for large-scale **SOA platforms**.
- Built customer-facing UIs with **Angular 7, Ionic, JavaScript ES6, and HTML5/CSS3**.
- Integrated backend systems with **MongoDB, and Oracle**, handling large-scale data and real-time transactions.
- Implemented **ActiveMQ** for asynchronous messaging between microservices.
- Migrated services to **AWS Cloud**, provisioning resources using **EC2, CloudFormation, and S3**, while monitoring with **CloudWatch**.

- Implemented **Spring Security** for user authentication and fine-grained authorization.
- Developed persistence logic with **Hibernate/JPA**, writing optimized queries for high-volume data.
- Applied **Elasticsearch** and **ELK stack** for logging, search, and monitoring of microservices.
- Followed **Agile methodology** with daily **SCRUMs**, sprint planning, and retrospectives.
- Conducted **unit, integration, and end-to-end testing** using **JUnit, Mockito, and Selenium**.
- Used **Gradle and Maven** for build automation, and **JBoss Artifactory** for artifact management.
- Participated in **code reviews, design discussions, and mentoring** of junior developers.

Environment: Java 8, Spring Boot, Angular 7, Ionic, MongoDB, Oracle, ActiveMQ, AWS, CloudFormation, CloudWatch, Elasticsearch, ELK, Jenkins, Selenium, Maven, Gradle, WebLogic, JBoss.

Client: Bank of America, Newark, DE - Remote

Jul 2017 – Feb 2019

Role: Java Backend Engineer

Responsibilities:

- Built secure and scalable banking applications using **Java, Spring MVC, Spring Security, and Hibernate**.
- Developed **SOAP and RESTful web services**, integrating them with customer and enterprise applications.
- Designed relational database schemas and queries in **Oracle and MySQL**, optimizing performance for financial transactions.
- Implemented **CA API Gateway** for secure service integrations and transaction monitoring.
- Built **CI/CD pipelines** using **Jenkins, Maven, and SVN**, automating deployments and reducing release cycles.
- Used **JUnit and Mockito** to build robust unit tests, ensuring compliance with quality standards.
- Applied **multithreading and concurrency** to improve processing time for financial workflows.
- Created **Spring Batch jobs** for large-scale transaction processing and reporting.
- Integrated **security and compliance measures** to align with financial regulations (SOX, PCI DSS).
- Monitored and debugged applications using **Splunk and AppDynamics**, ensuring high availability.
- Participated in **requirements gathering** with business analysts and contributed to technical documentation.
- Collaborated in **Agile teams**, delivering features iteratively and ensuring alignment with business goals.

Environment: Java, Spring MVC, Spring Security, Oracle, MySQL, Hibernate, SOAP/REST APIs, Jenkins, Maven, SVN, Splunk, AppDynamics.
