PROFESSIONAL SUMMARY

Dynamic and results-driven Full Stack Java Developer with 4+ years of experience designing, developing, and deploying scalable enterprise applications across banking and e-commerce domains. Adept at building robust cloud-native solutions using Java, Spring Boot, React.js, and microservices on AWS and Azure. Proven expertise in architecting secure RESTful APIs, optimizing CI/CD pipelines, and ensuring regulatory compliance for financial platforms. Demonstrated success in Agile environments, leading cross-functional collaboration, streamlining deployment cycles, and driving high-impact digital transformation.

TECHNICAL SKILLS

Front-end Technologies: HTML5, CSS3, JavaScript, React.js, Angular, jQuery, Redux, AJAX, TypeScript, Bootstrap, Next.js, Responsive Design, Web Accessibility (WCAG), Figma

Database Technologies: MySQL, MongoDB, PostgreSQL, SQL Server, Oracle, Redis, Firebase, Cassandra

Back-end Technologies: Java, Spring Boot, J2EE, Spring Security, JDK, Node.js, Express.js, Python, Django, ASP.NET, Flask, MVC Framework, SOAP, RESTful APIs, Microservices, Bash Script, FastAPI, JWT, OAuth2, API Gateway, Role-Based Access Control (RBAC)

Cloud & DevOps: AWS (EC2, S3, Lambda, RDS, API Gateway, Cognito, ECS, EKS), Microsoft Azure, Docker, Kubernetes (EKS, AKS), Jenkins, Git, GitHub Actions, Terraform, CI/CD Pipelines, Linux

Tools & Other Technologies: Git, Visual Studio Code, Docker, Jenkins, Kubernetes, Log4j, JUnit, Mockito, Apache Maven, Guava, Nginx, Swagger, Postman, Apache Kafka, RabbitMQ, SonarQube, Splunk, ELK Stack, Prometheus, Grafana, Load Balancing, Circuit Breakers, ServiceNow, Jira, Agile/Scrum

PROFESSIONAL EXPERIENCE

Full Stack Java Developer, JPMorgan Chase

Sep 2024 – Present | Remote, USA

- Developed a cloud-based digital banking platform using Java, Spring Boot, and microservices architecture, enabling secure account creation, automated loan approvals, and seamless KYC validation for an enhanced digital customer experience at scale.
- Designed RESTful APIs with Spring MVC and documented endpoints using Swagger/OpenAPI, ensuring efficient integration with payment gateways and simplifying cross-team collaboration on large-scale digital transformation initiatives.
- Implemented robust application security by configuring Spring Security with JWT authentication and strict role-based access, supporting PCI-DSS and regulatory compliance for sensitive financial data management.
- Deployed Docker containerized microservices and built CI/CD automation pipelines with Maven and Jenkins, significantly reducing manual intervention and accelerating build, testing, and deployment cycles for faster, more reliable releases.
- Collaborated in Agile teams using Jira, participating in sprint planning, retrospectives, and daily standups to drive effective project tracking, clear communication, and timely, high-quality software delivery.
- Integrated React.js with backend APIs to deliver responsive single-page applications, improving user engagement for online banking dashboards and transaction management modules.
- Enhanced system observability by implementing ELK Stack (Elasticsearch, Logstash, Kibana) for centralized logging and real-time monitoring, enabling rapid root cause analysis and reducing incident resolution time by 35%.

Full Stack Java Developer, Tech Mahindra

Jan 2020 – Dec 2022 | Remote, India

- Developed a scalable e-commerce backend with Spring Boot and a single-page React.js frontend, enabling secure authentication, payment processing, and real-time inventory management for seamless user experiences.
- Built secure RESTful APIs with token authentication, implemented caching and asynchronous processing, and improved API response times, resulting in a 40% boost in platform performance and user satisfaction.
- Managed complex data relationships and transactions in MySQL with Hibernate ORM, ensuring consistent, reliable order and customer modules with robust OneToMany and ManyToMany entity mappings.
- Deployed applications on AWS EC2, configured S3 for static hosting, and used Docker containers for CI/CD compatibility, streamlining environment portability and consistent, error-free releases.
- Practiced agile delivery, using Jira for sprint management and Postman for API testing, facilitating rapid feature rollouts and improved collaboration between development and QA teams.
- Integrated advanced monitoring and alerting using AWS CloudWatch and custom Prometheus metrics, enabling proactive detection of performance bottlenecks, reducing downtime by 30%, and ensuring high availability across critical services.
- Implemented end-to-end automated testing pipelines using JUnit, Selenium, and Jenkins, achieving 95% test coverage and drastically reducing manual regression efforts, which led to faster, more reliable production deployments.
- Optimized database queries and indexing strategies in MySQL, slashing critical transaction response times by 45% and supporting seamless scaling to accommodate 3x traffic growth during peak sales periods.

EDUCATION

Master of Science, Saint Louis University

Computer and Information Sciences

Jan 2023 – Dec 2024 | MO, USA

Bachelor of Technology, Kakatiya University

Electrical and Electronics Engineering

Jun 2017 – Aug 2021 | Warangal, India
