SUMMARY:

Results-driven Software Developer with 4+ years of experience in Java and MERN stack development. Spearheaded projects reducing claims processing time by 22% and deployment times by 11%. Proficient in building scalable solutions, microservices, and secure APIs, with expertise in PostgreSQL, AWS, and CI/CD pipelines. Adept at optimizing system performance and ensuring data security while delivering high-quality software aligned with business goals.

SKILLS:

- **Languages:** Java (Java 8), Python, JavaScript (ES6+), C++, C#, TypeScript, HTML/CSS, XML, SQL.
- **Frameworks:** Spring Boot, Hibernate, Struts, Angular, React.js, Node.js, Express.js, Django, JSP, Apache Kafka.
- **Tools & Technologies:** Kubernetes, Docker, Jenkins, AWS, Nginx, Git/GitHub, Tableau, Apache Spark, VS/VSCode.
- **Web Services:** REST, SOAP, Microservices Architecture, API Design (REST/GraphQL).
- **Security:** JWT Authentication, OAuth2, SSL/TLS, HIPAA Compliance.
- **Databases:** PostgreSQL, MySQL, MongoDB, SQL Server.
- **Methodologies:** Agile/Scrum, TDD, CI/CD.

EXPERIENCE:

Software Developer – Elevance Health Inc., New York

May 2024 - Current

- Created automated **health insurance policy management system** using **Java** and **Spring Boot**, enabling the automated tracking and renewal of health insurance policies, reducing manual errors by **25%** and improved operational efficiency.
- Implemented a **patient data synchronization module** that integrates with external healthcare providers' systems via secure **RESTful APIs**, ensuring real-time updates and **HIPAA**-compliant data handling.
- Developed a **React.js**-based frontend for a customer portal, allowing members to easily manage their health benefits, schedule appointments, and access personalized health plans, leading to a **10%** increase in user engagement.
- Optimized **CI/CD pipelines** using **Jenkins** and **Docker**, facilitating automated testing, bug fixes, and seamless deployments across development, testing, and production environments, reducing deployment times by **11%**.
- Deployed **Apache Kafka** for stream processing within **microservices**, increasing data pipeline scalability and performance by **12%**, which enabled more efficient data handling and faster response times in service delivery.
- Crafted **SQL** queries for insurance data analytics, optimizing query performance and contributing to data-driven decision-making processes, which enabled more precise risk assessments and policy adjustments.
- Implemented and tested software modules in a collaborative Agile environment, contributing to the successful delivery of secure document management solutions for the insurance sector.

Software Development Engineer I – JP Morgan Chase & Co., India

Sep 2021 - Aug 2023

- Led the development of a document archival system using **Java**, **Spring Boot**, and **AWS S3**, improving retrieval efficiency by **15%** and reducing storage-related incidents by **20%**.
- Enhanced client onboarding workflows by modernizing legacy applications using **Spring MVC**, **JSP**, and **RESTful APIs**, contributing to a **17%** increase in operational efficiency across investment banking portals.
- Contributed to the transition of internal banking applications to microservices architecture, leveraging **Docker**, **Kubernetes**, and **Spring Cloud**, which boosted deployment speed and system resilience.
- Collaborated with frontend teams to integrate **Java APIs** with **React.js**-based interfaces, improving usability and reducing client-side load times by **12%**.
- Developed reusable **SQL** queries and implemented data pipelines for financial transaction reporting, enabling **24/7** monitoring and compliance with **SOX** reporting standards.
- Actively participated in Agile ceremonies, sprint planning, and peer reviews, ensuring high-quality deliverables through **Git**, **Bitbucket**, **JIRA**, and **Jenkins CI/CD** processes.

Junior Software Development Engineer – JP Morgan Chase & Co., India

Jul 2020 - Aug 2021

- Developed a workflow automation module for internal KYC (Know Your Customer) verification processes using **Java**, **Spring Boot**, and **Hibernate**, reducing manual verification time by **22%** and streamlining onboarding for retail banking customers.
- Implemented secure **RESTful APIs** and **JWT**-based authentication to facilitate encrypted data exchange between internal microservices, ensuring compliance with internal cybersecurity protocols and reducing unauthorized access by **20%**.
- Contributed to a reconciliation tool for credit card transactions by integrating with upstream systems and transforming raw transaction data using **SQL** and **Java**, improving data accuracy and audit-readiness across monthly reporting cycles.

EDUCATION:

University of Florida, FL

Master of Science in Computer Science

Aug 2023 - May 2025

GPA - 3.96

Osmania University, India

Bachelor of Engineering in Computer Science and Engineering

Jul 2017 - June 2021

GPA - 3.70

CERTIFICATIONS:

- Code for Good Hackathon - Winners
- Smart India Hackathon - Runners up
- SEPathon (JPMC Hackathon) - Runners up
