817-709-3982

[sunildeupala2@gmail.com](mailto:sunildeupala2@gmail.com)

<https://www.linkedin.com/in/sunil-d-403bb52b3/>

## Professional Summary

Experienced Senior Software Engineer with over 8 years of experience architecting and delivering scalable full-stack solutions using Java frameworks and front-end technologies (React, Angular, Vue). Proven expertise in Java, Spring Boot, and AWS cloud deployments, complemented by a strong track record in enhancing data processing performance and user experiences. Adept at guiding projects from concept to deployment while mentoring junior engineers and implementing best practices. Excels at collaborating with cross-functional teams in fast-paced environments.

## TECHNICAL SKILLS

**Programming Languages:** Java8/9/11/17, Kotlin, Python, Spring Cloud, RESTful API design, Microservices, Kafka, Resilience4j, Elasticsearch

**Frameworks & Libraries:** Spring, Spring Boot, Hibernate, Angular JS, Struts (1.x/2.0), HTML5, CSS5, XML, jQuery, JavaScript, Node.js, Scala, JSF, React JS, Vue, Responsive Design

• **Cloud & Deployment:** AWS, Docker, Jenkins, Kubernetes, Terraform, Ansible, Cloud Formation, Azure Monitor, Grafana, Prometheus

• **Databases:** Oracle 10g/11g/12C, SQL Server, MySQL, DB2, SQL, PL/SQL, MongoDB, Cassandra, DynamoDB, PostgreSQL, Snowflake

• **Tools & Methodologies:** GIT, SVN, GitHub, Hudson, Bamboo, Ant, Maven, Grackle, JUnit, JMeter, Log4j, Test NG, Selenium, Jasmine, SoapUI, SOAP, REST/Restful, WSDL, JAXB, Eclipse, IntelliJ, Agile, Scrum, Waterfall

• **Monitoring & Resiliency:** Prometheus, Grafana, Dynatrace, Apache Camel error handling, retry strategies

• **Core Competencies:** Fullstack Software Engineering

## Professional Experience

### Citi Bank

Jan 2023 - Present

#### Senior Software Engineer

Irving, Texas

- Collaborated in the full software development lifecycle by contributing to requirement analysis, system design, development, and implementation using J2EE technologies.
- Implemented Docker containerization for applications, enhancing deployment efficiency and consistency.
- Used Kotlin with Arrow functional programming library for robust error handling and cleaner pipelines.
- Engineered and enhanced Verizon's customer billing system with Spring Boot, ReactJS, and MongoDB, achieving a 40% improvement in data processing and supporting scalable customer-facing solutions.
- worked with **Spring Cloud** for resiliency, configuration, or routing.
- Developed responsive and interactive UI components that significantly enhanced user experience across web and mobile platforms.
- Implemented Kafka producers and consumers for efficient event-driven message processing and effective offset management.
- Engineered integration solutions using Apache Camel to streamline data flows and automate business processes across diverse systems while incorporating robust error handling, logging, and monitoring strategies.
- implementing **microservice patterns** — like **service discovery (Eureka/Consul)**, **load balancing**, **distributed logging**, or **inter-service communication patterns** (like synchronous REST, asynchronous Kafka).
- Developed and optimized SQL queries, prepared statements, and stored procedures to support core application functionalities.
- Optimized application performance by leveraging Elasticsearch for indexing along with caching solutions such as Redis and Apache Ignite.
- Created SOAP-based web services and clients using JAXB and XML, effectively implementing a service-oriented architecture.
- Implemented continuous integration and deployment pipelines using Jenkins to streamline code delivery and uphold DevOps best practices.
- Engineered a robust authentication mechanism using Spring Security and JWT to secure customer data, billing services, and account management APIs.

### LPL Financial, Boston, MA

June 2021-Dec 2022

#### Full Stack Java Developer

Boston, MA

- Developed custom Angular directives and services to manage airport selection, baggage policies, and flight status tracking, ensuring seamless data flow within the airline booking application.
- Deployed Java Spring Boot applications on Linux environments by leveraging shell scripting to automate deployment tasks and streamline server configurations.
- implemented **circuit breakers (like Resilience4j or Hystrix)**, **retry logic**, **timeouts**, or **failover strategies**
- monitored system health with **Dynatrace**, **Prometheus**, or **Grafana**, position this as **resiliency monitoring**.
- Implemented features such as routing, data binding, and data updates without a page refresh using Angular 13.

- Collaborated with mobile developers to create Kotlin-based APIs optimized for Android client performance.
- Having good experience working with IBM WebSphere portal.
- Used Angular HTTP services for asynchronous validations for the input fields of the forms with the data that existed in the database.
- Utilized Test Driven Development (TDD) with JUnit and Mockito to proactively write unit tests, enhancing code reliability, test coverage, and overall application quality.
- Leveraged Ansible for effective configuration management, ensuring consistent application settings, JVM configurations, and dependency updates across servers.
- Implemented Dynatrace dashboards and alerts to monitor key performance metrics, server health, and API responsiveness, effectively minimizing downtime.
- Migrated a legacy application to a cloud-based infrastructure on Amazon Web Services (AWS), enhancing scalability and reliability of customer-facing systems.
- Engineered JMS components leveraging ActiveMQ to facilitate inter-application messaging and ensure reliable communication.

**Flagstar Bank, Troy, MI.**

**Jan 2020-May2021**

*Full Stack Developer*

*Troy, IL*

- Designed and implemented RESTful APIs for real-time flight search, booking, and seat selection, enhancing user experience and system efficiency.
- Involved in writing Java API for Amazon Lambda (Serverless) to manage some of the AWS services.
- Used JSF framework with AJAX in developing user interfaces using JSF UI Components, RIA components, Validator, Events and Listeners.
- Enhanced security with OAuth2 and role-based access control for secure authentication and authorization.
- Deployed Dockerized(container) Applications in Kubernetes cluster using Helm Charts.
- Developed and migrated the existing application into cloud-based platforms like Azure.
- Developed and Consumed RESTful Web Service.
- Configured Jenkins jobs for Application Deployments to the AWS cloud environments.
- Authorization of microservices using OAuth2 mechanism & Exposed server/client side of spring boot SOAP/REST Web Services.
- Experience with Infrastructure as Code (IaC) with tools like Terraform and CloudFormation to automate and manage infrastructure provisioning, improving consistency and reducing manual errors.
- Utilized Apache Cassandra for building scalable, high-performance applications, implementing efficient data modeling and querying strategies to handle large volumes of data in distributed environments.
- Involved in writing application-level code to interact with APIs, Web Services using AJAX, JSON and XML.
- Designed and Developed Stored Procedures, Triggers in Oracle to cater the needs for the entire application.
- Extensive experience with relational databases and proficient in writing complex SQL queries for data manipulation, analysis, and optimization.

**Comerica Inc.**

**Sep 2018 – Dec 2019**

*Full Stack Developer*

*Dallas, Tx*

- Implemented microservices architecture at Blackboard with Spring Boot, improving scalability and reducing downtime by 30% while integrating LMS with third-party services for enhanced performance.
- Developed applications using the latest Java/2JEE technologies and worked with the latest features of Java 8 and Java 7.
- Developed application using spring MVC, Spring Batch, JSP, JSTL and AJAX on the presentation layer, the business layer is built using spring.
- Developed REST APIs using Spring Boot and hosted all Microservices on PCF.
- Designed and developed various modules of the application with Spring MVC, Spring Security, and Spring restful web services.
- Used a Docker container to set up GitLab runners.
- Used Git for source code management and source tree for managing the code push, pulls, and resolving conflicts.
- Developed DAO objects and implemented data access layer using JPA-Hibernate to perform CRUD operations.
- Used Angular.js as framework to create a Single Page Application (SPA) which can bind data to specific views and synchronize data with server using Bootstrap, Angular.js.
- Involved in writing application-level code to interact with APIs, Web Services using AJAX, JSON, XML, and Angular.JS.
- Proficient in managing and deploying applications on AWS Cloud Platform, utilizing services such as EC2, ECS, CloudWatch, SQS, EBS, API Gateway, Route 53, and S3.
- Involved in creating, modifying SQL queries, prepared statements and stored procedures used by the application.

**Mutual of Omaha.**

**Feb 2016 – Aug2018**

*J2EE Developer.*

*Omaha, NE*

- Designed and implemented scalable solutions for fintech applications using java spring boot, enhancing secure transaction processing, payment gateway integrations, and financial data analytics.
- Worked with Angular.js routers, forms, modules, DOM, expressions, controllers, filters, and Http Request.
- Used Java Mailing or Messaging Service (JMS) API's for mailing detailed notifications depending upon the success and failure once the backend process is complete and for mailing administrator of any system related problems.
- Integrated Maven into CI/CD pipelines automating the build and deployment process for Spring Boot microservices.
- Created Data Source and deployed web application in the IBM WebSphere application Server.
- Conducted unit testing using Junit and Mockito.
- Involved in RDBMS database design using SQL, to write Stored Procedures, Functions, Triggers, prepared Statements.

**EDUCATION**  
**University of Cumberland**  
2023

---

*Master's in Information Technology*
