LinkedIn: [/in/yamshibathula](https://in.linkedin.com/in/yamshibathula)

PROFESSIONAL SUMMARY:

- Over 10+ Years of strong software experience in design, development and deployment of web-based and Client-Server business applications using OOP, Java/java technologies in various domains.
- Experience in following the Agile software development methodologies like Scrum, Sprint, and Traditional software models like Waterfall, Test-Driven Development (TDD).
- Expertise in UI Design and Development using HTML/HTML5, DHTML, CSS/CSS3 (SASS, LESS), JavaScript, Bootstrap, JSP, Typescript, jQuery, JSON, XML and AJAX that follows W3C Web standards.
- Proficient in Unified Modeling Language (UML) which includes creating Use-Case diagrams, Class diagrams, Sequence diagrams, and Activity diagrams using Rational Rose Software.
- Good knowledge of client-side JavaScript frameworks Angular 2.x/6.x with NGRX, React JS with Redox, and Flux patterns to create unique and customized front-end applications.
- Strong experience in developing responsive Single Page Applications (SPA) with Angular JS and JavaScript.
- Hands on experience in using React JS JavaScript library for building interactive UI's using one-way data flow, Virtual DOM, JSX, and React native concepts.
- Good Knowledge in using server-side JavaScript frameworks Node JS (Hapi JS, Express JS) to build event-driven, non-blocking I/O model web applications.
- Experience in developing web-based applications using Servlets, JSP, JSTL, JSF (Prime Faces), EJB, JDBC, Swing, Struts, Applets, JSI, Java Persistence API (JPA), JNDI, MDB, and JMS.
- Proficiency in Core Java concepts like Multithreading, I/O Streams, Exception Handling, Polymorphism, Garbage Collection, Socket Programming, Generics, and Java Collections.
- Designed and developed a responsive and dynamic user interface using Angular11 framework, providing a seamless and intuitive user experience for the web application.
- Experience with Java 1.8 features such as Lambda expressions for making anonymous inline function calls by using Functional Interfaces, and Streams API for Bulk data operations on Collections.
- Experience in using Spring MVC and Spring Boot to design and implement multi-tier applications with a good understanding of Spring annotations and XML configuration for dependency injection.
- Strong experience in using Spring Framework modules such as Spring MVC, IOC, AOP, JDBC, Spring Data, Spring Cloud, Spring Security, Spring Thyme leaf, Spring REST, Spring Microservices, and Spring Batch.
- Extensive experience in using ORM frameworks like Hibernate, and Spring Data JPA.
- Used Hibernate Object-relational mapping (ORM) solution technique for mapping data representation from MVC model to Oracle Relational data model with SQL-based schema.
- Developed and deployed Microservices based applications using Spring Boot and Spring Cloud.
- Good knowledge in implementing Java/J2EE Design patterns including Singleton, Factory, Model View Controller (MVC), Data Transfer Object (DTO), Data Access Object (DAO), and business delegate.

- Proficiency in multiple databases like PostgreSQL, MySQL, Oracle, MS SQL Server, Mongo DB, Cassandra and having good experience in writing stored procedures, functions, triggers using PL/SQL in JDBC, ODBC.
- Experience in developing Dynamic Single Page Application using MEAN full stack development tool kit.
- Experience in working with SOA architecture by developing RESTful and SOAP based web services using JAX-RS, JAX-WS, WSDL, Apache Axis2, Apache CXF, Jackson, Spring REST, and Jersey frameworks.
- Worked on validating RESTAPI's using Postman and automated the documentation using Swagger and WADL.
- Good experience in developing test cases with JUnit, Mockito for Unit testing in Test Driven Development.
- Used Log4J, SLF4J, Splunk for extensible logging, debugging, and error tracking.
- Strong understanding of common API technologies such as OAuth2, SAML, Spring Boot, and Microservices.
- Experience in message streaming by using Apache Kafka, JMS, and message brokers such as Active MQ, RabbitMQ for information exchange across the java applications.
- Good experience on working with Amazon Web Services (AWS) cloud services like EC2, S3, RDS, Dynamo DB, Elastic Load Balancing, Elastic beanstalk, SNS, SQS, and IAM.
- Developed services that utilize AWS SDKs (Dynamo DB, Elastic Beanstalk, Lambda Function).
- Familiar with Cloud Formation, Cloud Watch, Cloud Front, and managing security groups on AWS.
- Knowledge of integrating GIT into Continuous Integration (CI) environment along with Jenkins.
- Used Docker container system and container orchestration like EC2 Container Service, and Kubernetes.
- Hands on experience in implementation of Pivotal Cloud Foundry (PCF) services such as Pivotal Service Container, Pivotal Functional Service, and Pivotal Application Service.
- Expertise with build tools like Ant, Maven, and Gradle and involved in bug tracking using JIRA.
- Exposure to GitHub, Bitbucket, CVS, and SVN version control systems.
- Experience in developing, deploying, and troubleshooting web-based and enterprise applications on Windows, Linux, and Unix platforms.
- Experience with (IDE's) tools such as Eclipse, NetBeans, IntelliJ, and Spring Tool Suite.
- Experience in using web applications servers like Apache Tomcat, IBM Web Sphere, Apache Http, and JBoss.
- Quick learner, highly motivated team player with excellent organizational and analytical skills. Ability to multi-task and work within deadlines in a competitive environment.

EDUCATION:

Bachelor's in technology from Osmania University

TECHNICAL SKILLS:

Languages	C, Java 11, J2EE, SQL, PL/SQL, Python, PHP, Scala, TypeScript
J2EE Technologies	Servlets, JDBC, JSP, JSF, EJB, Java Security, JPA, JNDI, JMS, JAX-RS, JAX-WS, JAX-B

Mark-up/Web Technologies	HTML5, CSS3, JavaScript, jQuery, AJAX, Angular 4/7 (v8/9/11), ReactJS, Vue.JS, Node.JS, Next.JS, Require.JS, JSP, JSTL, XML, XSD, XSL/XSLT, SAX/DOM, JSON, SASS, LESS, Bootstrap, Angular Material
Tools & Framework	Struts, Spring, Hibernate, Spring MVC, Spring Web Flow, Spring IOC, Spring AOP, Spring Boot, Microservices, JSF, JUnit, SOAP UI, ANT, Maven, Jenkins, Spring Data JPA, Spring Cloud, Spring Security
Web services	SOAP, Restful, WSDL, JAX-RPC, JAX-RS, JAX-WS, JAX-B, Axis, Jersey, Swagger
Messaging Services	Active MQ, Rabbit MQ, Kafka, Apache Camel, IBM MQ, JMS
Web/App Servers	IBM WebSphere, Apache Tomcat, JBoss, WebLogic Server, Apache HTTP Server
Database	Oracle, MySQL, SQL Server, IBM DB2, MongoDB, Cassandra, PostgreSQL, DynamoDB, Elasticsearch
IDEs	Eclipse, IntelliJ, NetBeans, Spring Tool Suite (STS), RAD
O-R mapping	Hibernate, MyBatis, Spring Data JPA
Testing Tools/ Others	asmine, Karma, Selenium, Cucumber, Protractor, Soap UI, Putty, Rational Clear Quest, RTC, Enzyme, React Testing Library, Log4j, SLF4J, Splunk
Version Control	Tortoise SVN, CVS, Rational ClearCase, Git, GitHub, Bitbucket
OS & Environment	Windows Win2k Server, Sun Solaris, UNIX, Linux
Cloud Technology	AWS (EC2, S3, RDS, DynamoDB, Elastic Load Balancing, Elastic Beanstalk, SNS, SQS, IAM, CloudFormation, CloudWatch, CloudFront, Lambda, API Gateway), Azure, Pivotal Cloud Foundry (PCF)
DevOps	Docker, Kubernetes, Terraform, Jenkins, Azure DevOps, AWS CodePipeline

PROFESSIONAL EXPERIENCE:

Bank Of America - Plano, TX(Remote)

Sep 2023 – Present

Full Stack Developer

Responsibilities:

- Developed and maintained scalable web applications using Java 8, Spring Boot 2.x, Spring MVC, Spring IOC, Spring AOP, and Hibernate.
- Implemented web-based applications with Core Java, Multithreading, JDBC, JSP, Servlets, and Web Services.
- Applied design patterns like Singleton, Factory, and DAO to meet application requirements.
- Created RESTful web services to manage JSON data flow into databases, tested via SOAP UI.
- Built REST APIs with Express Router middleware and integrated MongoDB for backend services.
- Utilized JMS for message-based communication across multiple clients.
- Designed and developed user interfaces with JSP, JSF, AJAX, JavaScript, HTML5, DHTML, CSS3, and Bootstrap.
- Developed microservices architecture using Spring Boot, ensuring scalability and modular deployment.
- Implemented SOAP-based messaging formats, validated against XML Schema Definition (XSD).
- Wrote JPA queries with JPQL and Criteria API for efficient database operations.
- Enhanced application performance by adopting Angular 9/11 component-based development, optimizing future framework transitions.
- Built reusable front-end components and directives with Angular 9/11 and TypeScript.

- Developed responsive single-page applications (SPAs) using React JS, Flux, and Redux.
- Implemented React forms and React Router for data-driven UI components and navigation.
- Integrated RESTful APIs with React and Angular using asynchronous TypeScript programming.
- Created server-side rendering (SSR) and static site generation (SSG) applications with Next.js.
- Built GraphQL APIs with Java, using GraphQL SDL for schema definition and Apollo Server integration.
- Developed backend systems with Node.js, Express, MongoDB, and middleware setup with Webpack and Babel.
- Implemented real-time data streaming solutions with Apache Kafka, designing producers and consumers for high-volume data.
- Managed cloud-based infrastructure on AWS, including Lambda, EC2, S3, DynamoDB, API Gateway, and CloudFormation.
- Deployed containerized microservices with Docker and Kubernetes, ensuring scalability and fault tolerance.
- Integrated CI/CD pipelines with Jenkins and Azure DevOps, automating builds and deployments.
- Developed and managed SQL and NoSQL databases, including MySQL, MongoDB Atlas, and Cassandra DB.
- Wrote custom Cassandra DB queries with CQL, handling data migration with ETL tools like Talend.
- Implemented unit and integration tests with Jasmine, Karma, and Enzyme, ensuring code quality.
- Performed component testing using React Testing Library, validating UI behavior and state management.
- Created custom React component libraries, enhancing development efficiency and consistency.
- Designed cross-browser-compatible web pages, leveraging HTML5, CSS3, Bootstrap, and Angular Material.
- Configured application servers on WebSphere, managed version control with GIT and CVS, and tracked issues with JIRA.
- Leveraged GitHub for version control, enabling seamless collaboration, code reviews, and CI/CD pipeline integration with Jenkins for automated builds and deployments.
- Managed secrets and configurations with Kubernetes ConfigMaps and Secrets, enabling secure deployments.
- Implemented advanced deployment strategies with Kubernetes, like canary releases and traffic splitting with Istio.
- Ensured real-time state management with Web Sockets in React, improving data synchronization across users.
- Leveraged Apache Camel for route creation in SOAP web services, enabling flexible message processing.
- Used AWS SDKs and APIs for seamless cloud service interaction, integrating with S3, RDS, and Aurora instances.
- Set up local development environments with Docker, providing consistent and reproducible configurations.
- Built and optimized GraphQL APIs, improving data retrieval efficiency and reducing over-fetching.

Environment: Java 8, Spring Boot 2.x, Spring Cloud, RESTful APIs, SOAP, GraphQL, AWS (Lambda, EC2, S3, DynamoDB, CloudFormation, RDS), Azure DevOps, Jenkins, Docker, Kubernetes, Angular 9/11, React JS, Redux, Next.js, TypeScript, HTML5, CSS3, Bootstrap, MongoDB Atlas, MySQL, Cassandra DB, Apache Kafka, Webpack, Babel, Jasmine, Enzyme, IntelliJ IDEA, JIRA, WebSphere, CVS, GIT.

Full Stack Developer

Responsibilities:

- Actively collaborated with stakeholders to gather requirements and prioritize user stories following the Agile methodology, ensuring smooth sprint cycles and on-time delivery.
- Developed cloud-based applications using Spring Cloud, ensuring scalability and flexibility across distributed systems and cloud environments.
- Utilized Spring MVC and Spring Boot frameworks for building robust, scalable applications based on Model-View-Controller (MVC) architecture.
- Integrated Spring Data JPA to efficiently map POJOs to database tables, leveraging annotations like `@Entity`, `@Table`, and `@Column` to streamline data persistence.
- Designed and implemented RESTful APIs for internal and external communication, ensuring fast and efficient data exchange.
- Developed the front-end user interface with HTML, CSS, JavaScript, and TypeScript, creating responsive and interactive web pages.
- Led the development of AngularJS components to consume RESTful services, utilizing Node Package Manager (NPM) for front-end dependency management and build tools.
- Implemented unit testing using Karma and Jasmine for Angular components, ensuring the reliability and correctness of the front-end code.
- Worked with Spring Data JPA to integrate Hibernate ORM, simplifying database interaction and improving performance.
- Developed microservices architecture, leveraging Spring Boot for developing independently deployable services that communicate over HTTP and messaging queues.
- Implemented messaging solutions using RabbitMQ and IBM MQ, ensuring reliable communication across services within the microservices environment.
- Built and deployed applications using Docker containers, and integrated with Kubernetes for container orchestration.
- Configured and deployed services on AWS using Elastic Beanstalk for scalable cloud infrastructure and S3 for storage and backup.
- Implemented API Gateway using Zuul to handle request routing, load balancing, and API authentication across microservices.
- Utilized AWS Lambda for event-driven architecture, enabling serverless functions to automate processes and enhance application performance.
- Developed and maintained CI/CD pipelines using Jenkins and AWS CodePipeline, streamlining the deployment process and ensuring continuous integration.
- Integrated Elasticsearch to improve the performance and scalability of the application's search functionality, enabling fast and advanced search capabilities.
- Managed infrastructure as code with Terraform, ensuring reproducibility and scalability of the cloud infrastructure.
- Worked on migrating legacy systems to a microservices-based architecture, optimizing the application for better maintainability and scalability.
- Performed database optimization using Elasticsearch and SQL techniques, ensuring fast data retrieval and enhancing overall system performance.
- Contributed to the development of real-time analytics solutions, using Elasticsearch as a backend to provide meaningful insights for customers.
- Utilized GitLab for version control and CI/CD pipeline management, automating testing and deployment processes while maintaining robust issue tracking and container registry integration.
- Configured and monitored AWS CloudWatch, setting alarms for system metrics like CPU utilization, memory usage, and disk space to ensure system health and avoid downtime.

- Provided support for troubleshooting, maintenance, and debugging of deployed applications, ensuring that any issues were quickly identified and resolved.
- Assisted in integrating new technologies into the application stack, ensuring the project kept up with current industry standards and best practices.

Environment: Java 11, J2EE, JSP, PL/SQL, Angular, Spring Boot, Kafka, RabbitMQ, JMS, Oracle, MySQL, Elasticsearch, AWS, Microservices, Docker, Kubernetes, Terraform, Jenkins, Hibernate ORM, RESTful Web Services, AWS Lambda, Zuul, Spring Data JPA, SQL, Elasticsearch, CI/CD, AngularJS.

State of Michigan - Lansing, MI

July 2019 – Sep 2021

Full Stack Developer

Responsibilities:

- Participating in application solutions including assisting with planning and architectural design, development, resolution of technical issues, and application rationalization.
- Created Typescript reusable components and services to consume REST API's using Component-based architecture provided by Angular 4.
- Involved in Unit testing of application using Karma and Jasmine library to make sure that the application is compatible in all browsers.
- Implemented micro services architecture using spring boot and Spring REST to create REST end points and integrated Swagger Spring boot to get dynamic documentation.
- Implement modules into Node.js to integrate with designs and requirements.
- Involved in writing the front-end code for the application using AngularJS.
- Implemented the presentation layer (GUI), based on open-source framework, involving Servlets, JSP, JSTL, JSF, CSS3, HTML5, JavaScript and GWT.
- Used jQuery, Angular JS and Node JS to develop the rich user interface and to invoke RESTful Web Services to perform various operations.
- Experienced in developing an enterprise application by writing server-side code with Node JS and Express Framework, a database to store and retrieve data with Mongo DB and front-end web pages designing with React JS.
- Supported Spark, Scala, Kafka and Elasticsearch working with Spark SQL on the Cloudera framework
- Design and implement data ingestion and transformation for big data platforms. (Spark, Sqoop, Kafka, etc.) using highly parallelized transformation jobs in Spark including Spark Streaming Writing code in Python, Shell scripts and C-C++ and unit test cases for J2EE.
- Used Maven for developing build scripts and deploying the application into WebLogic.
- Performed backend operations using Hibernate and native SQL on various databases.
- Developed single page applications using Angular 4/6, Typescript, HTML5, CSS3, and Bootstrap.
- Developed user specific Highlights (dashboard menu) section, Home Page, Admin home page, user module using Spring framework, Hibernate ORM module, Spring Core Module, XML, JSP and XSLT.
- Worked on Web Services using Java API for XML, JSON Services(JAX_RS) and worked on the build, deploying RESTful web services.
- Expertise in designing and developing web and mobile applications using HTML 5, CSS3, Less, Sass, JavaScript, jQuery, Node.js, AngularJS.

- Used Spring Boot to modularized code and implemented Rest API's using Spring Rest and integrated Swagger API for documentation.
- Used AngularJS and Handlebars.js framework where data from backend is stored in model and populated it to UI.
- Developed stored procedures and triggers using PL/SQL to calculate and update the tables to implement business logic using Oracle database.
- Involved in build and deployment of Microservices with Jenkins.
- Conducted code review session at the end of the sprint and be the point of contact for code quality.
- Created computing and data resources on AWS using EC2.
- Deployed containers and Microservices in AWS using EC2 Container Services. Designed, configured and deployed Amazon Web Services (AWS) for a multitude of applications utilizing the Amazon cloud formation.
- Managed version control using Git, implementing effective branching strategies and integrating with Jenkins for automated builds and deployments.
- Wrote several Playbooks and created various roles for applications using Ansible and deployed the Applications/Services on the client hosts.
- Used HTML5, CSS3, Vue.js and the internal framework components to build the presentation layer for the application.

Environment: Java 8.0, REST, Spring, AWS, Spring quartz, Drools, Struts, JSF, EJB, jQuery, AJAX, Angular 4/6, Bootstrap, JSON, Toad, Spark, SparkSQL, IBM Websphere Application Server 7.x, Spring Boot, Docker, React JS, SQL, VUE JS Server, DB2, Clear Case, Selenium, UM L, JSP, JIRA, Jenkins, Microservices, Agile, Git, and Junit.

Healthgrades - Denver, CO

Feb 2018 – June 2019

Java Developer

Responsibilities:

- Collaborated with stakeholders to gather and analyze requirements, ensuring alignment with business needs and technical feasibility.
- Designed and developed robust, scalable RESTful web services using Java and Spring Framework.
- Implemented secure APIs using Spring Security and OAuth framework for authentication and authorization. • Developed backend services in Scala using Akka for log tracking and real-time data processing.
- Created and maintained RESTful web services documentation using Swagger and Jersey.
- Deployed and managed Java applications on JBOSS and Tomcat servers.
- Utilized GIT for version control and collaborated with teams following Agile methodology.
- Designed and implemented data persistence layers using Hibernate and JPA for efficient database interactions.
- Worked extensively with Elasticsearch to enhance search functionality and optimize data retrieval.
- Used ActiveMQ for reliable message brokering between producer and consumer services.
- Developed Java-based solutions for mapping data into Elasticsearch before indexing.
- Created and optimized complex SQL queries and stored procedures for Oracle and MongoDB databases.

- Followed J2EE design patterns like DAO, Business Delegate, Session Façade, and Singleton to maintain code efficiency and modularity.
- Implemented logging and monitoring solutions using Log4j and conducted regular unit testing with JUnit.
- Automated build and deployment processes using Maven and Jenkins for continuous integration and deployment.
- Employed GitHub for version control, facilitating collaborative development, pull request workflows, and integration with Maven and Jenkins for automated builds.
- Participated in code reviews, architectural discussions, and performance tuning activities.
- Provided production support, troubleshooting issues, and ensuring system reliability and performance.

Environment: Java 1.6, Scala, Spring Framework, Spring MVC, Hibernate, JPA, ActiveMQ, Elasticsearch, Oracle, MongoDB, JBOSS, Tomcat, Swagger, Jersey, Maven, Jenkins, JUnit, Log4j, Agile.

Tech Mahindra Limited - Hyderabad, India

Sep 2015 – May 2017

Full Stack Developer

Responsibilities:

- Involved in various SDLC phases like Design, Development and Testing. Interact with business managers to transform requirements into technical solutions.
- Designed the application using the J2EE design patterns such as Session Façade, Business Delegate, Service Locator, Value Object and Singleton.
- Configured spring to manage Actions as beans and set their dependencies in a Spring context file. Developed presentation tier as HTML, JSPs using Struts 1.1 Framework. Used AJAX for faster page rendering.
- Developed General Ledger module, which streamlines analysis, reporting and recording of accounting information. General Ledger automatically integrates with a powerful spreadsheet solution for budgeting, comparative analysis and tracking facility information for flexible reporting.
- Developed client-facing Struts web applications by creating and modifying Java classes, JSPs, Struts Delegates and DAOs, AJAX.
- Implemented the MVC architecture using Struts framework. Developed various Action Classes that route requests to appropriate handlers, Coded Struts Action Servlets to process requests and forward to Struts Action classes.
- Developed JSP and Java Helper classes for In-patient and out-patient Information. Wrote Action classes, Request Processor, Business Delegate, Business Objects, Service Classes and JSP pages.
- Application integration with Spring Web Services to fetch data from external Benefits application using SOA architecture, configuring WSDL based on SOAP specifications and marshalling and un-marshalling using JAXB.
- Developed web pages using Servlets and XML for various modules and involved in environment set up with Ant, Eclipse, JBoss and SQL Server 2005.
- Used GitLab for version control and CI/CD pipeline configuration, ensuring efficient code management, automated testing, and deployment processes.
- Used Oracle as the backend database and wrote PL/SQL packages, stored procedures, views and functions at the Oracle database.

Environment: Core Java, J2EE, JSP, Struts, Servlets, Spring, Hibernate, JDBC, Oracle 8i, AJAX, XML, ANT, Junit, CVS, Maven and Disapplication Server.

Tech Mahindra Limited- Hyderabad, India

June 2014 – Sep 2015

Java Developer

Responsibilities:

- Implemented Business Delegate, DAO, DTO, Service locator, Session Façade, View Helper, and Value Object design patterns for all the modules.
- Developed Hibernate mapping files and hibernate configuration for persisting data to the database.
- Executing trades across various asset classes and markets, utilizing trading platforms, algorithms, and order types to achieve best execution and minimize transaction costs while adhering to investment strategies.
- Used for java persistence API (JPA).
- All code was written using the Eclipse IDE used WebSphere server for deploying the web content.
- Developed UML Class Diagram's, Sequence Diagram's for documenting design documents.
- Extensively used JUnit for unit testing (Mockito), integration testing and production testing.
- Used ANT Builder extensively for the code building and created Daily Rolling Log using Log4j.
- Used Spring Framework for Dependency injection and integrated with the Hibernate.
- Used SVN as Version Control System.
- Developed real-time data processing applications using Apache Flink, leveraging its stream processing capabilities for high-throughput and low-latency data processing.
- Responsible for the successful deployment of the code to the client server after a thorough series of testing.
- Implemented Spring Web flow principles that build upon Spring MVC to support user-level, application-directed control flows.
- Implemented Spring MVC architecture to develop presentation tier and business layer using components like dispatcher Servlet, Handler Mappings, Controller, Model and View Object, View Resolver.
- Used Angular.js for connecting the API's using Angular.js \$http service.
- Implemented Git for version control, managing branching and merging strategies while integrating with Ant for streamlined build and deployment workflows.

Environment: Java 6, Servlets, spring, Hibernate, Restful web services, Flink, Apache, JSON, XML, Tomcat Server 6 and Oracle, SQL, DB2
