SUMMARY

Experienced **Robotic Process Automation (RPA) UiPath Architect** with over a decade of expertise in designing and implementing automation solutions using **UiPath (Core & Advanced)**, Blue Prism, and Fortra Automate. Evolving from **development** to **solution design** and **architecture**, I have successfully delivered **200+ end-to-end automation processes**. Proficient in leveraging advanced UiPath capabilities, including **Document Understanding, AI/ML-based Intelligent Document Processing (IDP), and classifier/taxonomy-driven extraction**, with over three years of hands-on expertise. Passionate about optimizing business workflows, driving digital transformation through Intelligent Automation, and architecting scalable, high-performance automation frameworks.

EXPERIENCE

RPA UiPath Architect - Transformation

Fidelity Information Services - FIS Global

Client: Internal

Project Name: Implementation Acceleration (Treasury)

Jun '24 — Present
Jacksonville, FL (Remote)

Project Description:

Various products under treasury are built and marketed by pre-sales teams. To demo the products to various clients, pre-sales teams pre-load the data and get the product demo ready. This involves a lot of manual work and repetitive for each and every client. This is called implementation phase. To accelerate the implementation, we introduced RPA which will build once use multiple times to populate the data.

Summary:

As an **RPA UiPath Architect** and Senior Lead Consultant - Transformation at FIS Global, I played a pivotal role in the design and implementation of RPA solutions across the organization. I began by setting up the **UiPath** environment and developing proof of concepts to showcase the tool's capabilities for automation. Later, I transitioned to Fortra Automate, where I took ownership of setting up the environment and designing the framework for the entire Development Life Cycle of RPA initiatives. My key focus was on establishing best practices for RPA development, ensuring that the automation solutions adhered to industry standards and provided maximum efficiency. I was responsible for designing key documentation templates including effort estimation calculators, PDD, SDD, Test Case documents, and Operational Handbooks, leveraging Atlassian Confluence tools. I also set up a **JIRA project** for managing automation tasks, where I implemented scrum and kanban boards to streamline progress tracking and reporting. In my role as an **RPA UiPath Architect**, I led the creation of code standards to ensure that development time was optimized while maintaining high-quality deliverables. I worked closely with the cloud team to define and manage roles and responsibilities through **AD Groups** to govern access to **cloud environments**, ensuring compliance and security. I also managed the creation of roles and groups within Fortra Automate to ensure appropriate access control. Ultimately, I **built and deployed 50+ automations** using Fortra Automate, which streamlined processes for the Integrity financial application, a key platform for managing financial data.

- **Architected the RPA solution design and frameworks** for the **entire Development Life Cycle** in **UiPath** and **Fortra Automate**.
- Led the **transition from UiPath to Fortra Automate**, designing a seamless **migration strategy** and ensuring minimal business disruption.
- Developed **proof of concepts** to demonstrate the capabilities of RPA tools, ensuring alignment with business needs and stakeholder expectations.
- Defined **best practices** for **RPA development**, ensuring that the solutions were aligned with industry standards, scalability, and maintainability.
- Oversaw the **end-to-end design and architecture** of **50+ automations**, ensuring they aligned with business goals and had optimal efficiency.
- Established **RPA governance** frameworks, including **code quality standards**, **review protocols**, and **security** guidelines for automation solutions.
- Designed and implemented end-to-end automation solutions leveraging **UiPath Document Understanding** to process structured and unstructured documents.
- Utilized **Taxonomy Manager** to standardize document structures, improving automation efficiency across global business units.
- Integrated **Action Center** for exception handling, enabling seamless human-bot collaboration in document validation.
- Coordinated with **cloud teams** to design and implement **roles and responsibilities** for **access management** through **AD Groups**, ensuring **security** and **compliance** within automation environments.

- Worked closely with cross-functional teams (e.g., **business analysts, cloud architects, developers**) to ensure seamless **integration** and **deployment** of automation solutions.
- Developed a **Center of Excellence (CoE)** strategy for scaling and sustaining RPA initiatives across the enterprise, including training, certification, and governance processes.
- Designed and created key **documentation templates** such as **effort estimation calculators, PDD, SDD, Test Case documents**, and **Operational Handbooks** using **Atlassian Confluence** for collaborative development.
- Created **JIRA projects, scrum boards, and kanban boards** to facilitate effective tracking, reporting, and management of RPA initiatives.
- Developed **code standard templates** to streamline development and reduce project timelines.
- Ensured automation solutions were compliant with **security policies** and **data protection regulations**, particularly in cloud environments.
- Led the **deployment of 50+ automations** for **Integrity**, a financial platform, optimizing key processes for **money management**.
- Led the **RPA architecture review process**, conducting design reviews and ensuring that solutions adhered to **best practices** and **design principles**.
- Led the **transition from UiPath to Fortra Automate**, designing a seamless **migration strategy** and ensuring minimal business disruption.

Senior Lead Software Engineer
Virtusa Consulting Private Limited

Dec '21 — May '24
Pune, Maharashtra, India

Client: BNY Mellon

Project Name: Manual Process Remediation, RPA CoE

Project Description:

RPA CoE is responsible for setting up, managing, reviewing quality of the code, setting up guidelines and best practices in the entire Bank.

Manual Process Remediation (MPR) program is specifically designed to automate the high risk manual processes with the goal of risk reduction in the various business units under Operations of the Bank.

Summary:

As a **Lead Software Engineer**, later promoted to **Senior Lead Software Engineer**, at **Virtusa Consulting Private Limited**, I worked for **BNY Mellon** as a **UiPath Architect**, as part of the **Center of Excellence (COE) team**. Initially, my role involved **reviewing UiPath code and design** for automation solutions. I then led the **IE to Chrome migration**, successfully completing the transition before moving into a new role as **Program Lead for Manual Process Automation**. In this role, I focused on mitigating **high-risk manual processes**, developing **50+ Blue Prism automations** integrated with the **Baseline tool**, a workflow system built on **Camunda Workflow**, using **RESTful APIs**.

Following this, I played a crucial role in **transitioning from Blue Prism to UiPath**, onboarding UiPath as the **new automation tool**. I developed **30+ automation processes** using **UiPath and the RE Framework**, integrating them with **Baseline** through **RESTful APIs**. In addition to my technical contributions, I acted as a **client-facing lead**, managing the **program, stakeholder relations, and delivery standards**. I led a **global team of 27 resources**, ensuring seamless execution and **quick turnaround times** for automation delivery.

Roles and Responsibilities:

- Reviewed **UiPath code and design** as part of the **COE team** at BNY Mellon.
- Led and successfully executed the **IE to Chrome migration** for Blue Prism bots.
- Took on the role of **Program Lead for Manual Process Automation**, working on **High-Risk Manual Processes** to mitigate operational risks.
- Designed and developed **50+ UiPath automation processes**, integrating with **Baseline (Camunda Workflow)** via **RESTful APIs**.
- Spearheaded the **transition from Blue Prism to UiPath**, ensuring a smooth migration and tool adoption.
- Built **30+ automation processes** using **UiPath and the Document Understanding Framework**, integrating with **Baseline** through **RESTful APIs**.
- Developed **Intelligent Document Processing (IDP) solutions** using **UiPath AI/ML models** to extract critical data from payroll and HR documents.
- Configured and fine-tuned **classifiers, taxonomies, and extractors** to optimize Intelligent Document Processing (IDP) workflows.
- Integrated **AI Center** and **Action Center** for human-in-the-loop validation, ensuring high accuracy in document processing.
- Implemented **custom extractors** to improve data accuracy for critical banking workflows.
- Converted **10+ processes** from **Blue Prism to UiPath** as part of the migration effort.
- Acted as a **client-facing lead**, managing **stakeholder expectations and program execution**.

- Led a **global team of 27 resources**, ensuring **high delivery standards, efficiency, and quick turnaround times**.

Senior Member Technical

ADP

Jul '19 — Dec '21

Pune, Maharashtra, India

Client: Internal (Global View)

Project Name: Global View Americas, Global View Mexico, Global View Implementation

Project Description:

ADP is a HCM Company which manages the payrolls as part of HCM functionalities. Global View majorly talks about the On-Cycle and Off-Cycle pay rolls of different regions. As part of the payroll, it has to complete various steps for each employee. This is a big tedious job to process manually as the volume will be high and criticality of the process.

Summary:

As an RPA Developer (Blue Prism), I have designed, developed, and deployed end-to-end automation solutions to optimize business processes across various domains. I have worked extensively with Blue Prism, leveraging its capabilities to build scalable and efficient bots, automate repetitive tasks, and enhance operational efficiency. My expertise includes process analysis, workflow design, object development, and exception handling, ensuring robust and error-free automation. I have utilized Blue Prism Control Room for bot scheduling, monitoring, and troubleshooting to maintain seamless execution. Additionally, I have integrated REST APIs to enable communication between Blue Prism and other enterprise applications, facilitating advanced workflow automation. I have also focused on optimizing existing RPA solutions, improving bot performance, and ensuring compliance with best practices in security, governance, and audit requirements. Beyond development, I have collaborated with business and IT teams to identify automation opportunities, document solutions, and provide training and support, driving successful RPA adoption across organizations.

Roles and Responsibilities:

- Developed and maintained **20+ Blue Prism automation processes** to streamline operations in **Human Capital Management (HCM)**.
- Integrated **Blue Prism** with **IBM BPM** using **RESTful APIs** for seamless workflow management.
- Led a **team of five**, guiding automation efforts for **Global View Americas** and **Global View Mexico**.
- Worked on **application migration** from **CRM to Siebel**, modifying automation scripts to support Siebel.
- Designed and implemented automation solutions for various technologies, including:
 - **OleDb automation** for database interactions.
 - **Excel automation** for data extraction and reporting.
 - **Tesseract OCR** for image-based text recognition.
 - **SAP automation** for payroll processing.
 - **Java-based automation** for enterprise applications.
 - **Windows application automation (Outlook automation)** for email processing.
 - **Web-based automation** for browser-based applications.
- Extensively worked on **Schedulers and Queue Management** in Blue Prism to optimize bot execution.
- Performed **testing and migration of automation code** after a **Blue Prism upgrade from version 6.2 to 6.5**.
- Created **Blue Prism objects** as part of the **IE to Chrome migration**, ensuring compatibility with updated browser technology.

Senior Software Engineer

HSBC

Sep '18 — Jul '19

Pune, Maharashtra, India

Client: Internal

Project Name: Global Private Banking - US

Project Description:

HSBC Bank has a department called Global Private Banking where it manages premium clients and their money. This money management is done through multiple applications. All these applications are critical in nature. So there is a daily housekeeping activity which restarts the JVMs of WAS instances on which these applications are running. This ensures to clear all the active sessions and starts the application freshly for the users. There is a support task that requires to launch all these applications manually and login to check all the screens are accessible. This requires a lot of manual effort. RPA Blue Prism is used to automate each of these applications. This will notify and ensure all the applications are up and running.

Summary:

As a **Senior Software Engineer** at **HSBC Software Development India Private Limited**, I worked in the **Global Private Banking sector**, automating various **Private Banking applications** using **Blue Prism**. My primary focus was developing **health check automation bots** to ensure seamless navigation across applications after daily housekeeping activities. I built **10+ Blue Prism bots**, each dedicated to an application, and strategically scheduled them to run sequentially, optimizing **licensing costs**. Additionally, I created **comprehensive documentation**, including **PDDs, SDDs, and operational guidelines**, to support automation governance. I also provided **hypercare support** and conducted a **process handover** to the global team, ensuring a smooth transition with a detailed **Operational Handbook** for long-term maintenance.

Roles and Responsibilities:

- Designed, developed, and deployed **10+ Blue Prism bots** to automate **daily health checks** for Private Banking applications.
- Ensured each bot successfully navigated all application screens after **housekeeping activities** to verify system readiness.
- Implemented a **sequential execution strategy** to minimize **Blue Prism licensing costs** while maintaining efficiency.
- **Process Definition Document (PDD)** – Documenting business workflows and automation requirements.
- **Solution Design Document (SDD)** – Defining automation architecture, framework, and technical specifications.
- **Test Cases & Execution Reports** – Validating automation reliability across applications.
- **Release Notes** – Capturing changes, improvements, and bug fixes for each bot release.
- **Operational Handbook** – Providing structured guidance for bot monitoring, troubleshooting, and maintenance.
- Provided **hypercare support** post-deployment, resolving issues, fine-tuning bots, and ensuring a smooth transition.
- Conducted **process handover** to the global team, delivering training sessions and support documentation for ongoing maintenance.
- Worked closely with **business stakeholders** to refine automation processes, address pain points, and ensure compliance with **banking security policies**.

Software Engineer

Tech Mahindra

Client: UBS

Project Name: Capital Markets - Managed Data Services

Jul '14 — Aug '18

Pune, Maharashtra, India

Project Description:

UBS has various capital market products for master data management, taxation, corporate actions and pricing. Each of these applications are used extensively by processing teams to complete the day to day activities. Also for the verification, there are multiple layers of teams are working at the same time. As Tech Mahindra has transitioned these products, there is a high volume need for user creation and role management. This is done through a ticketing tool called redmine. Once there is a user request, a support user has to manually go to user management application and create/modify the users accordingly. As the anticipated volume was high, we have leveraged RPA to accomplish this task. As the teams work in different timezones, the requests could come in round the clock. This is another reason for leveraging RPA.

Summary:

At **Tech Mahindra Private Limited**, I began my career as an **Associate Software Engineer** and was later promoted to **Software Engineer**. I worked on **Capital Markets** for the **UBS client**, initially focusing on **Solaris and WebSphere Application Server (WAS) administration**, providing application support for two years. I then transitioned into **UiPath development**, where I automated user management processes in the **Redmine ticketing tool**. Using the **UNO framework**, a custom-built automation framework similar to the **Robotic Enterprise Framework**, I designed, developed, and maintained **five automation bots** over two years. Additionally, I handled bot maintenance, implemented change requests, and ensured automation efficiency while documenting the entire automation lifecycle.

Roles and Responsibilities:

- Developed and deployed **automation bots in UiPath** to streamline user management in **Redmine** (user creation, updates, deletions).
- Utilized the **UNO framework** for automation, ensuring reusability, exception handling, and scalability.
- Designed, tested, and deployed **five UiPath bots**, optimizing business workflows and reducing manual effort.

- Monitored and maintained RPA solutions, ensuring smooth bot execution and handling **change requests**.
- Conducted **unit testing, debugging, and performance tuning** of UiPath workflows.
- Provided **documentation and support**, including:
 - **Process Definition Document (PDD)** – Capturing business process workflows for automation.
 - **Solution Design Document (SDD)** – Documenting technical architecture, framework, and automation approach.
 - **Test Case Documents** – Creating and executing test scenarios to validate bot functionality.
 - **Release Notes** – Logging changes, enhancements, and fixes for each bot release.
 - **Operational Handbook** – Providing bot monitoring, troubleshooting, and maintenance guidelines.
- Conducted **knowledge transfer and training** to ensure smooth automation adoption by stakeholders.
- Managed **Solaris operating system administration**, including system monitoring, patching, and performance optimization.
- Provided **WebSphere Application Server (WAS) support**, ensuring uptime, troubleshooting issues, and deploying applications.
- Conducted **incident management**, root cause analysis, and performance tuning for applications.
- Collaborated with teams to resolve **infrastructure and middleware-related issues**.

EDUCATION

B. Tech in Information Technology, JNTU, Kakinada (Ramachandra College of Engineering) (GPA: 60.98) Jun '10 — Mar '14
Eluru, India

High School Education in Maths, Physics, Chemistry, Geethanjali Junior College (GPA: 87.1) Jun '09 — Mar '10
