

Bez Bek
(617) 690-1097
bezbe79@gmail.com

SUMMARY

- Proficient in Power BI, Tableau, SSAS, and SSRS for data visualization and reporting.
- Experienced in Python Pandas for data manipulation, analysis, and cleaning.
- Expertise in SQL Server Integration Services (SSIS) for ETL tasks.
- Skilled in designing efficient data pipelines.
- Proficient in Git for collaborative development and version control.
- Competent in data cleansing and preprocessing for data quality assurance.
- Knowledgeable in data modeling and database design.
- Proficient in extracting data from databases, APIs, and flat files.
- Mastery of data transformation techniques like filtering, aggregating, and merging datasets.
- Extensive experience in creating custom calculations and measures in Power BI and Tableau.
- Proficient in automating repetitive data tasks using Python scripting.
- Skilled in applying statistical methods and machine learning for data analysis.
- Expertise in developing data-driven reports and dashboards for business stakeholders.
- Adept in data warehousing and architectural principles.
- Proficient in working with both structured and unstructured data sources.
- Skilled in conducting data profiling and exploratory data analysis.
- Experienced in creating predictive models and performing regression analysis.
- Competent in using machine learning libraries like scikit-learn and TensorFlow.
- Skilled in feature engineering and model evaluation.
- Proficient in using Python to implement machine learning algorithms.

Skills

- Relational Database Management Systems (RDBMS): MSSQL, Oracle, Postgres, MongoDB, TOAD 7.5, SQL Developer, MS Access.
- Business Intelligence (BI) Tools: Power BI Desktop, Service, Tableau, SSAS, Crystal Reports, MS Excel, SSRS.
- SQL Server Tools: SQL Server Management Studio, Business Intelligence Development Studio (BIDS), SQL Server Profiler, FTP, TOAD.
- Methodologies: Agile, Waterfall, Data Modeling (Logical/Physical/Dimensional), MS Project.
- Cloud Services: Microsoft Azure, Amazon Web Services (AWS), Snowflake, Oracle Enterprise Manager Cloud.

Education and Certification:

- BS in Computer Science
- Microsoft Certified: Data Analyst Associate with Power BI

EXPERIENCE

BOK Financial - Tulsa, OK May 2023 to present

Sr. Data Analyst / Power BI

Roles and Responsibilities

- Collaborate with stakeholders to comprehensively understand their data analysis needs.
- Utilize Power BI to create interactive and insightful dashboards and reports.
- Develop efficient data models within Power BI to optimize data analysis.
- Extract data from various sources and seamlessly integrate it into Power BI.
- Utilize Python Pandas for data cleaning and preprocessing to ensure high data quality.
- Perform data transformations and aggregations to derive meaningful insights effectively.
- Customize calculations and measures in Power BI to meet specific business requirements.
- Automate data extraction and transformation processes using Python scripts.
- Conduct exploratory data analysis (EDA) to identify patterns and trends.
- Work with structured and unstructured data sources to extract valuable insights.
- Optimize query performance within Power BI to handle large datasets efficiently.
- Implement robust data security measures and access controls in Power BI reports.
- Maintain comprehensive documentation of data analysis processes and findings.
- Design data pipelines for streamlined data processing and integration.
- Present data-driven insights and recommendations to business teams effectively.
- Collaborate with SQL Server Integration Services (SSIS) for seamless ETL tasks.
- Coordinate closely with data engineers and database administrators for data integration.
- Perform statistical analysis and leverage machine learning techniques when necessary.

Environment Power BI Desktop, Power BI Service Pro, Business Objects, SharePoint, QlikView, SQL, MSSQL, MS Access, Microsoft Excel

Cleveland Clinic - Cleveland, OH Jul 2020 to Apr 2023

Data Analyst

Responsibilities:

- Collaborate closely with stakeholders to outline project objectives and data requirements effectively.
- Collect and organize data from diverse sources to facilitate subsequent analysis.
- Utilize Python and Pandas for exploratory data analysis (EDA) to uncover meaningful data patterns.
- Develop and refine machine learning models to support predictive analytics initiatives.
- Create dynamic and impactful data visualizations and reports using Tableau.
- Optimize data extraction, transformation, and loading (ETL) processes to improve efficiency.
- Apply statistical analysis techniques to identify valuable insights and trends within the data.
- Evaluate model performance and fine-tune algorithms using Python libraries such as scikit-learn.

- Utilize Python Pandas for proficient data manipulation, cleansing, and preprocessing tasks.
- Visualize data and model outcomes using visualization libraries like Matplotlib and Seaborn.
- Implement rigorous data validation and quality assurance protocols to maintain data integrity.
- Develop custom Python scripts to address specific data analysis needs effectively.
- Perform time series analysis and predictive forecasting using Python Pandas.
- Conduct A/B testing and hypothesis testing to support informed decision-making processes.

Environment: Tableau, Microsoft Azure, Python, Pandas, Seaborn, SharePoint, Visual Studio, Scrum/Agile, XML, SQL Profiler, TFS, MS Office

Harbor Freight Tools - Calabasas, CA Nov 2019 to Jun 2020

SQL/SSIS Developer

Responsibilities:

- Design and optimize stored procedures, functions, triggers, and views for ETL processes.
- Implement normalization and create database objects like tables and views.
- Develop dashboards for operational, sales, financial, and KPI analysis.
- Identify and address SQL Server performance issues by optimizing queries and indexing.
- Build SSIS packages for data integration and transformation.
- Design, test, and deploy SSRS reports.
- Modify database schemas and objects as needed.
- Establish and enforce database security policies and permissions.
- Maintain detailed documentation for database design and processes.
- Collaborate with teams to gather and analyze data requirements.
- Provided technical support and troubleshoot SQL Server, SSIS, and SSRS issues.
- Ensure data integrity and security in all database operations.

Environment: Microsoft SQL Server 2012/2014, Visual Studio, SSRS, SAP -Hybris, MuleSoft. .Net, GIT, Jira, and Tableau.
