PROFESSIONAL SUMMARY:

I am a highly skilled AWS Cloud Engineer with 5 years of experience designing, deploying, and managing scalable, secure, and cost-effective cloud solutions. I specialize in leveraging AWS services such as EC2, S3, RDS, Lambda, CloudFormation, and VPC to optimize infrastructure performance and reliability. My expertise includes CI/CD automation, infrastructure as code (Terraform), containerization (Docker, ECS), and implementing robust security best practices. I bring a strong problem-solving mindset, a commitment to continuous improvement, and a proven ability to deliver high-impact cloud solutions aligned with business goals.

EXPERIENCE:

COMCAST CORPORATION | AWS Cloud Engineer

Mar

2024 - Present

- Designed and deployed highly available and scalable AWS infrastructure using EC2, VPC, S3, and RDS, improving application uptime by 99.9% and reducing latency by 25% across multiple production environments.
- Automated infrastructure provisioning and configuration management using Terraform and AWS CloudFormation, decreasing deployment time by 60% and minimizing human error in production rollouts.
- Implemented CI/CD pipelines with Jenkins, GitHub Actions, and AWS CodePipeline, resulting in a 40% faster release cycle and improved code quality through integrated testing and rollback strategies.
- Deployed and managed containerized applications using Docker, Amazon ECS, and Kubernetes, achieving seamless scaling and reducing container orchestration issues by 30%.
- Monitored system health and performance using AWS CloudWatch, Prometheus, and the ELK Stack, proactively identifying and resolving issues, which led to a 45% reduction in incident response time.
- Strengthened cloud security posture by enforcing IAM policies, implementing AWS KMS, configuring security groups, and conducting monthly vulnerability assessments, reducing potential risks by 70%.
- Collaborated with cross-functional teams via Slack, Trello, and Jira to deliver cloud solutions aligned with business objectives, contributing to the successful launch of 3 mission-critical applications in under 6 months.

LEVELUPINTECH | Cloud Engineer

Sep

2023 - Feb 2024

- Designed and deployed secure AWS VPC architectures to enhance cloud network security, resource isolation, and overall performance.
- Automated infrastructure provisioning and Jenkins deployments using Terraform, significantly reducing manual errors and improving scalability.
- Streamlined Docker containerization and orchestration workflows, integrating with Portainer CE for efficient application management and improved DevOps practices.
- Developed and maintained CI/CD pipelines using GitHub Actions, Jenkins, and Docker, accelerating code delivery and ensuring consistent deployment standards.
- Migrated a dynamic website to AWS S3 with CloudFront distribution, implementing Lambda functions for serverless tracking and optimizing user interaction analytics.
- Created and executed Bash and Python (Boto3) scripts for EC2 lifecycle management, automating routine tasks and boosting system reliability.
- Managed user access controls and enforced permission policies on Linux (Ubuntu) systems, strengthening OS-level security and reducing unauthorized access incidents.

DELL TECHNOLOGIES | Cloud Engineer

Mar

2020 - Aug 2023

- Migrated over 120 on-premises workloads to AWS using EC2, S3, and AWS Database Migration Service, reducing infrastructure costs by 35% and improving system reliability.
- Developed and maintained infrastructure as code (IaC) using Terraform and CloudFormation, standardizing deployments across environments and reducing configuration drift by 90%.

- Implemented secure VPC architectures, including subnetting, routing, NAT gateways, and security group policies, enhancing network performance and reducing cross-region latency by 20%.
- Orchestrated containerized applications using Docker and Amazon ECS, improving deployment speed and environment consistency for development and production pipelines.
- Established monitoring and logging solutions with AWS CloudWatch, AWS X-Ray, and Grafana, which reduced troubleshooting time by 50% and improved system observability.
- Enforced robust IAM policies, integrated AWS KMS for data encryption, and conducted quarterly audits, leading to 100% compliance with internal and external security standards.
- Collaborated with development and operations teams using Confluence, Jira, and Slack, contributing to the successful launch of 5 cloud-native applications with zero critical post-release issues.

EDUCATION:

- **Bachelor of Arts in English** | Florida Atlantic University
2016

CERTIFICATION:

- **AWS Cloud Practitioner**
- **AWS Developer Associate**

SKILLS:

Categories	Skills
Cloud Platforms & Services	AWS (EC2, S3, RDS, VPC, Lambda, DynamoDB, CloudFront, Route 53, API Gateway, IAM, CloudTrail, CloudWatch, SNS, SQS, Elastic Beanstalk, AWS Config, AWS WAF, AWS Shield, AWS X-Ray, AWS Organizations, AWS Trusted Advisor), Microsoft Azure
Infrastructure as Code	Terraform, AWS CloudFormation, Ansible, Packer
CI/CD & DevOps Tools	Jenkins, GitHub Actions, AWS CodePipeline, CodeBuild, CodeDeploy, Git, Bitbucket, Maven, Gradle
Containerization	Docker, Amazon ECS, Amazon EKS, Kubernetes
Monitoring & Logging	AWS CloudWatch, Prometheus, Grafana, ELK Stack (Elasticsearch, Logstash, Kibana), AWS X-Ray, Datadog
Programming & Scripting	Python (Boto3), Bash, Shell Scripting, PowerShell
Infrastructure Management	IAM Policies, VPC Design and Configuration, Subnetting, Routing, Network Security, Troubleshooting, Infrastructure Optimization
Database Management	MySQL, NoSQL (DynamoDB), Database Performance Tuning
Security & Compliance	AWS KMS, AWS Config Rules, GuardDuty, AWS Inspector, CloudHSM, Secrets Manager
Collaboration Tools	Trello, Slack, Jira, Confluence, Microsoft Teams, Notion

ACHIEVEMENTS:

- Successfully migrated over 120 on-premises workloads to AWS, leveraging EC2, S3, and AWS Database Migration Service, which reduced infrastructure costs by 35% and significantly increased system reliability. Spearheaded the deployment of scalable, highly available architectures, contributing to 99.9% application uptime and a 25% reduction in latency across environments.
- Led automation initiatives using Terraform, Jenkins, and AWS CloudFormation to standardize infrastructure deployment, cutting release times by 60% and virtually eliminating human error in production environments. Enhanced cloud security posture through IAM hardening, encryption via AWS KMS, and proactive vulnerability assessments, resulting in a 70% reduction in potential security risks.
- Played a key role in deploying and managing containerized applications using Docker, Amazon ECS, and Kubernetes, improving deployment efficiency and reducing orchestration issues by 30%. Designed and implemented CI/CD pipelines using GitHub Actions, Jenkins, and AWS CodePipeline, accelerating software delivery by 40% and ensuring consistent, reliable deployments across multiple environments.
