Manish Pratap Singh

Senior Technical Architect

Experience summary

Manish has been working in the software industry for more than 24 years. He is skilled in designing and developing solutions on various technologies. He has worked on various large-scale IT projects and has a good working knowledge of complete software development lifecycle (SDLC) execution using Agile and Waterfall. Experienced in leading complex architectural projects from concept to completion. Utilizes blend of creative and technical skills to deliver innovative and sustainable designs. A record of successful project management and strong client relationships. Architectural professional with robust experience in designing innovative and sustainable structures. Adept at team collaboration and delivering high-impact results. Skilled in project management, design software, and client relations. Strong adaptability and reliability in dynamic work environments. Accomplished architectural professional with history of driving impactful design initiatives and leading high-profile projects to completion. Known for fostering collaborative environments and achieving outstanding results. Proficient in architectural design, project management, and adapting to evolving project needs.

Certifications and Trainings

- Azure Fundamentals- AZ-900
- GCP, Professional Cloud Architect
- MCP, Passed 070-562 exam - ASP.net 3.5
- MCP, Passed 070-528 exam - ASP.net 2.0
- MCP, Passed 070-536 exam - .NET Framework.
- Corporate training on Design Patterns

Skill set

- Experience in solution architecture and design for distributed System.
- Hands-on experience in application development.
- Solid hand of experience and knowledge on Cloud architecture.
- Experienced in effort estimation for building complex solutions.
- Relevant knowledge and understanding of defining and implementing checks and processes for supporting quality standards of projects.
- Possesses excellent communication, interpersonal, leadership and analytical skills.

Programming and scripting languages	C#, .NET, .NET core, VB .NET, VB and Embedded VB, Asp.net, ASP, Cold Fusion, PHP, PowerBuilder
Frameworks, tools, and libraries	MVC, ASP. Net, ReactJS, Angular, AngularJS, Python, NodeJS, WPF, ArcGIS, ESRI Map, beaver, DevExpress, Telerik, Ektron CMS,

Cell No.: 312-576-9288

Email: singhpmanish@hotmail.com

	Infragistics Net Advantage, Web Services, WCF Services, Web API, SSRS, SSIS, MuleSoft, ETL MuleSoft, Ajax, jQuery, Tortoise SVN, Vault Source, Visual Source Safe, GIT, GitLab, VSTS, MS Project Plan, Crystal Reports.
Cloud Technologies	Microsoft Azure, Google Cloud and Amazon Web services (AWS), Microsoft Azure storage explorer, Azure CLI, PowerShell, Azure Portal, Terraform Azure Web app, Azure Function app, Azure SQL Server, Azure Logic App, and Azure Key Vault, Azure Application Insight, etc.
Development methodologies	Agile, TDD, scrum and XP
Servers and platforms	Team Foundation Server, IIS Server, and Windows
Databases and BI	Azure SQL Server, Azure MongoDB, SQL Server, Snowflake, PostgreSQL, Sybase, DB2, Oracle and MySQL

Projects

Company	Coforge Ltd	Dec 2024 – Current
Client	LPL Financial, NYC	
Role	Senior Technical Architect	
Project overview	LPL Financial is continuing to grow and support larger, more complex organizations. A recurring need of these organizations revolves around personalization of product availability for their advisors. Organizations are requiring a focused, personalized view of LPL’s holistic product offerings, tailored to their needs to help their advisors have more specific experience when managing LPL’s broad available product offering. There are couple of application I worked on to facilitate the business like TMLB product shelf, Business Configurator application to help the business and analysts.	
Technologies	C#, .NET Core, ReactJS, Postgres SQL, Entity Framework, AWS, Visual Studio, Terraform and Git	
Responsibilities	● Developed architecture and design for key components. ● Created an SQL database and configured the Servers. ● Created several Database components in SQL database. ● Built several services using web API and implemented Circuit breaker. ● Built several AWS component using Terraform. ● Build several UI component using React JS form and consumed several libraries to build responsive web application. ● Build and maintain interactive user interfaces for the web application using React JS. ● Coded the database framework using C# and Entity framework. ● Implemented the logging and exceptions handling and logging. ● Worked with the DevOps team to help them with build and release configurations.	

Company	Pronix Inc	May 2024 – Oct 2024
Client	XeroOne System, Lacey, WA	
Role	Senior Architect	

Project overview	XeroOne is implementing a SQL server data warehouse for their client to process public / private school data and perform the data cleansing to house the data for the reporting.
Technologies	C#, .NET Core, SQL Server database, Visual Studio and Git.
Responsibilities	● Developed architecture and design for key components. ● Created an SQL database and configured the Servers. ● Created several Database components in SQL database. ● Coded the database framework using C# and ADO.net. ● Create several stored procedures and functions in SQL server. ● Implemented the logging and exceptions handling and logging. ● Worked with the DevOps team to help them with build and release configurations. ● Designed the framework for the data processing pipeline using C#.

Company	Nagarro Inc	July 2019 – Apr 2024
Client	CLEAResult Inc. Atlanta, GA	
Role	Senior Architect	
Project overview	ONLI is a program for low-income families in Canada. The assessors internal/ external perform the canvassing in the given region and capture the electrical appliance reading using the JotForm forms to send the images and other critical information along with their digital signatures. The ONLI system helps to generate the pdf and images from the JotForm using the JotForm Api and save the information in the SharePoint document folder.	
Technologies	C#, ReactJS, Azure Function apps, Azure Storage, Azure Logic app, Key Vault, Azure SQL database, SharePoint API, JotForm API,	
Responsibilities	● Involved in requirement understanding, designing, development, and peer reviewing using software development life cycle. ● Developed architecture and design for key components. ● Worked on several Azure function apps using time triggers / Http triggers. ● Build component-based architecture to build web application using React JS, creating reusable UI components. ● Involved in all the phases of UI front end design, development, deployment using React JS and node. ● Configured the secrets and database connection string in the Azure key vault.	

	● Created an Azure SQL database and configured the Servers. ● Created several Database components in Azure SQL database. ● Converted several Power Automate workflows to Azure logic app and moved the several scripting logics to Azure function app. ● Created several Logic apps to automate the workflows. ● Implemented the logging and exceptions handling and logging the files Azure storage. ● Created and maintained several documentations, best practices, System design documents, technical design documents. ● Mentor and monitor the team to help them build the system and grow in their respective career path. ● Worked with DevOps team to configure the CI/CD pipeline to help them with build and release configurations.
--	---

Client	Department of social services / Department of health and services, NYC, NY
Role	Senior Architect
Project overview	The project involved the development of a responsive web application using react JS and an update to the existing application. The agency is held responsible for the homeless people in the city and provides shelter for them in all possible ways. There are shelters available across the borough which are used to provide all kinds of services for homeless people.
Technologies	React.js, C#, bootstrap, Web API, PostgreSQL, dbeaver, Swagger, ArcGIS, ESRI Map, JavaScript, NodeJS, GitLab
Responsibilities	● Involved in requirement understanding, designing, development, and peer reviewing using software development life cycle. ● Developed architecture and design for key components. ● Build several components in web development using React JS. ● Consumed the ESRI Map in the react.js as a JavaScript and made several changes to the map to display the relevant data for the client and end user to watch the progress in the application. ● Build interactive UI front end using React JS, react form, helped the team to build the responsive web application. ● Built ado.net component to connect to SQL SERVER to perform the CRUD operations. ● Worked closely with client on-client side and helped them in solution designing and creating POC for complex service integrations. ● Worked on PostgreSQL to help model the database using DBeaver.

	● I worked as a core developer as well and led the team for the development.
--	--

Client	Department of health and mental hygiene, NYC, NY
Role	Senior Architect
Project overview	The project involved the development of a responsive web application using angular and an update to the existing application. The agency handles public health along with issuing dog licenses, birth certificates, and conducting restaurant inspection and enforcement. The application is designed to process claims for the various revenue units.
Technologies	Angular 6.0, C#, bootstrap, WCF Services, Web API, ADO.NET, SQL Server, Swagger, Auto rest, Fluent Validation, JavaScript, NodeJS, GIT
Responsibilities	● Involved in requirement understanding, designing, development, and peer reviewing using software development life cycle. ● Developed architecture and design for key components. ● Built ado.net component to connect to SQL SERVER to perform the CRUD operations. ● Worked closely with client on-client side and helped them in solution designing and creating POC for complex service integrations. ● Coded Stored Procedures and Functions using SQL SERVER. ● I worked as a core developer as well and led the team for the development. ● Created and maintained several documentations, best practices, System design documents, technical design documents and data operation processes. ● Worked on the CI/CD pipeline using kanban and git. ● Mentor and monitor the team to help them build the system and grow in their respective career path.

Client	BCG, Chicago IL
Role	Senior Architect
Project overview	The project involved the development and maintenance of BCG products. The core responsibilities were installation and configuration. Worked closely with the client's IT team to help them understand the product operation & monitor.

Technologies	C#, .NET core Web API, Python, NodeJS, bootstrap, PostgreSQL, Entity framework core.
Responsibilities	● Involved in requirement understanding, designing, development, and peer reviewing using software development life cycle. ● Built a repository layer using Entity framework core to connect to PostgreSQL to perform the CRUD operations. ● Delivers, installs, configures, implements, and provides technical support for specific client facing applications. ● Works together with the client's IT team to install the application and ensure compliance with any relevant client policies and requirements. ● Provides first class training to the client's IT team to enable them to run, monitor, and support the application. ● Collaborates with vendors and other available resources to diagnose and resolve system technical and/or nontechnical problems, bugs, performance, and other issues. ● Documents, tracks, and monitors bugs, problems, and issues to ensure prompt resolution. ● Performs quality control tests and keeps logs of problems, issues, changes, and future enhancements. ● When required, it provides first class training and aid to application users. ● Worked closely with clients on the product delivery side. ● Coded Stored Procedures and Functions using SQL SERVER. ● Worked as Lead developer to lead the team for the development.

Client	Department of health and mental hygiene, NYC, NY
Role	Senior Architect
Project overview	The project involved the development of a responsive web application using angular and an update to the existing application. The agency handles public health along with issuing dog licenses, birth certificates, and conducting restaurant inspection and enforcement. Company	Proficient Business Systems	Jun 2013 – July 2019
Client	Employee & Security department, Lacey WA	
Role	Solution Architect	
Project overview	Paid Family & Medical Leave (PFML) ESD planned to implement the newly implemented state law for PFML to all the employers/employees working in the state of WA, which includes the premiums processing and making the payments. As part of the process, employers need to declare their employees and withhold amounts for their employees. Premium processing can be sent by employers, employer agents, staff, and employees. If an employer has a better plan in the state of Washington, the employer would be entitled to give the voluntary plans to their employees and the state would figure out, based on the wage calculation and review process, whether to decide the plans and approve the voluntary plan.	
Technologies	WCF Services, Web API Core, C#, net core, Dynamic CRM 365, Dynamic AX, Entity Framework Core, SQL SERVER, Scale out, Postman, Swagger, Auto rest, Tidal, Fluent Validation, Microsoft Azure, Azure Web, Azure SQL, Azure function, Visual Studio and Visual Studio code and Application Insight.	
Responsibilities	● Involved in requirement understanding, designing, development, and peer reviewing using software development life cycle. ● Designed the framework using object-oriented program (OOP). ● Developed architecture and design for key components.	

	● Worked closely with the client's architect to design the framework and integration with Dynamic CRM and AX with the integration services. ● Coded DAL part using Entity Framework core as an ORM tool to connect with SQL server to perform the CRUD operations. ● Coded Stored Procedures and Functions using SQL SERVER. ● Created the framework to build the WCF services and Web API for the client's consumer to process the data. ● Developed several windows services. ● Designed the database model for transaction and dimensional using SQL Server. ● I configured the build and release pipeline for various projects using Azure VSTS. ● Created several Azure functions app and worked on Azure blob storage and sent email notification. ● Lead the team during the development process and mentor them. ● Created several adapter services to consume the agencies services. ● Coded Stored Procedures and Functions using SQL SERVER. ● worked on the CI/CD pipeline using Azure VSTS to build & deploy in various environments. ● Designed the database model with 5th normalization using SQL Server ● Created several adapter services to consume the agencies services. ● Created and maintained several documentations, best practices, System design documents, technical design documents and data operation processes. ● Mentor and monitor the team to help them build the system and grow in their respective career path.
--	--

Client	Mesirow Financial, Chicago IL
Role	Solution Architect
Project overview	The project involved the development of several WCF services / Web API for the client's customers to process the due diligence and investment oversight for the Fiduciary Partnership Service and portfolio construction solutions.
Technologies	.NET Framework 4.5.2, C#, Python, Dapper, Lambda Express, WEB Service, WCF Services, Web API, IIS 7.0, Microsoft Visual Studio 2014, VSCode, Snowflake, SQL SERVER 2014, XML, XSLT, JavaScript jQuery, JSON, TFS, Amazon web service (AWS).

Responsibilities	● Created desktop application to consume the WCF Services and web Api for our clients. ● Created several Stored procedures and functions using SQL Server 2014. ● Worked closely with the data engineering team daily to oversee the data ingestion, integrity of the data and data schema. ● Create several SQS with SNS to replace their monolithic MSMQ messaging services to send out email notifications. ● Maintained the AMI for their various clients across different locations. ● Created a virtual machine and watched the usage of using auto scaling. ● Created users and groups to access the resources for the various departments using IAM, Created IAM policies. ● Provisioned the Snowflake resource in the AWS and loaded the data from Amazon S3 and SQL server data sources for the Analytical purpose. ● Provisioned EC2 services, SQL and SES to cater the business needs. ● Worked with the analytics and reporting team to help them generate the analytic reports. ● Created several S3 for the client, implemented the MFA delete and versioning on S3 objects for accidental deletion. ● Implemented data transfer from on premises to AWS data storage. ● Created several alerts and notifications to keep track of the health of the system using AWS CloudWatch. ● Designed the database model with 5th normalization using SQL SERVER 2014. ● Used Dapper for accelerated development with the help of LINQ to SQL. ● Worked on several windows services and WCF services. ● Extensively worked on WCF services. ● Extensively worked on Web API to perform the CRUD operations and created a JSON object using Web API. ● Created messaging service using MSMQ to log the exceptions and write the logging later into the database. ● Created several SSIS packages for importing the data into the database. ● Code review and providing better solutions to the team. ● Created and maintained several documentations, best practices, System design documents, technical design documents and data operation processes.
-------------------------	--

	● Mentor and monitor the team to help them build the system and grow in their respective career path.
Client	Department of Health and Social Services, Camp hill PA
Role	Solution Architect
Project overview	The project involved the development of a web application. This application helps the agency to provide several DHSS featured services to their inhabitants like public health, service center, disabilities, etc.
Technologies	.NET Core, C#, Entity Framework, Lambda Express, WEB Service, WCF Services, Web API, IIS, Microsoft Visual Studio, SQL SERVER, SSIS, SSRS, Cognos reporting, Log4Net, DevExpress, XML, XSLT, JavaScript jQuery, Json, TFS, Active directory, LDAP and Dollar Universe
Responsibilities	● Worked as a solutions architect. ● Involved in requirement understanding, designing, development, and peer reviewing using software development life cycle. ● Developed architecture and design for key components. ● Created several POC for integrating tools and libraries. ● Install & configure SSRS server and mentored the team to develop the reports and SSIS packages. ● Created several POC to generate the reports, like Cognos reporting, SSRS reporting. ● Designed and built a Data operation framework, working with a cross-team for the data ingestion. ● Configured and scheduled the batch jobs using dollar universe. ● DOM traversing, client-side validating and API call using JavaScript, jQuery and Json. ● Extensively worked on TFS for sources management and Build deployment. ● Created & modified build template for the TFS build definitions to accommodate SSRS/SSIS 2014 and SSIS 2008 projects for the build output. ● Created and maintained several documentations, best practices, System design documents, technical design documents and data operation processes. ● Mentor and monitor the team to help them build the system and grow in their respective career path.

Company	ResourceSoft Inc	Dec 2010 - Jun 2013
Client	IMS, Morton Grove, IL	
Role	Program Analyst	
Project overview	Project involved the development of a web application to cater the customer needs, the proposed system helps to create the job orders and keep a track of their jobs.	
Technologies	.NET Framework, C#, MVC, Entity Framework, Lambda Express, WEB Service, WCF Services, Web API, IIS, SQL SERVER 2008, Quartz's, Elmah log, Log4Net, Telerik, XML, XSLT, JavaScript jQuery, Json, Visual SVN, Tortoise SVN	
Responsibilities	● Involved in requirement understanding, designing, development, and peer reviewing using software development life cycle. ● Developed architecture and design for key components. ● Extensively worked on Active Directory and membership provider. ● Created several POC for integrating tools and libraries. ● Integrated Rich text controls in MVC using Telerik. ● Coded Stored Procedures and Functions, Triggers using SQL SERVER. ● Created several reusable components using user controls and custom controls.	

Company/ Client	M&R CC/ Redcats , NYC NY
Duration	Sept 2010 – Nov 2010
Role	Sr. Software Engineer
Project overview	The project involved the development of a responsive web application for online shopping using PayPal as payment gateway.
Technologies	.NET Framework, ASP.NET, C#, WCF Services, IIS, SQL SERVER, XML, XSLT, JavaScript, CSS, XHTML, Team Foundations Server
Responsibilities	● Involved in requirement understanding, designing, development, and peer reviewing using software development life cycle. ● Developed architecture and design for key components. ● Created several POC for integrating tools and libraries. ● Created web application and web pages and user controls using ASP.net. ● Coded Stored Procedures and Functions using SQL SERVER. ● Worked as core developer and was involved in peer review.

Company/Client	Raffles Solutions Pvt limited/ Client is a leader in a finance industry in USA
Duration	Mar 2010 – Jun 2010
Role	Team Lead, System Analyst
Project overview	I led a team to build a Time management system, which is being used globally across the world and helps the HR team to process the payroll for the employees/ contractors.
Technologies	.NET Framework, ASP.NET, C#, WCF Services, IIS, SQL SERVER, XML, XSLT, JavaScript, CSS, XHTML, Team Foundations Server
Responsibilities	● Involved in requirement understanding, designing, development, and peer reviewing using software development life cycle. ● Developed architecture and design for key components. ● Created several POC for integrating tools and libraries. ● Mentored the team and peer review. ● Designed the framework component using object-oriented programming. ● Designed the database model for transaction and dimensional using SQL Server. ● Designed the framework to perform the testing. ● Unit testing & test case plan for the testing team.

Company/ Client	Auxano Technologies/ Client is a leader in a media & publishing industry in USA
Duration	Jul 2007 – Sept 2008
Role	Team Lead, System Analyst
Project overview	Project involved the development of several web applications using Ektron CMS as content management system.
Technologies	.NET Framework, ASP.NET, C#, WCF Services, IIS, SQL SERVER, XML, XSLT, JavaScript, CSS, XHTML, Team Foundations Server
Responsibilities	● Involved in requirement understanding, designing, development, and peer reviewing using software development life cycle. ● Developed architecture and design for key components ● Created several POC for integrating tools and libraries. ● Installed & Configured Ektron CMS 400. ● Created site Setup, work area, Metadata definition and accessing them in the Web Pages, Slide Show etc.

	● Create several web applications using ASP. Net developed web pages and user controls. ● Built several class libraries and services using C# and WCF services. ● Used Ektron APIs (Application Programming Interface) to insert/update in the Ektron database. ● Lead the team during the development process. ● Worked on multiple web projects using EKtron CMS 400.
--	---

Company/Client	System Plus System/ Client is a leader in healthcare industry in India.
Duration	Sept 2006 – Jul 2007
Role	System Analyst
Project overview	Project involved the development of an ERP system to cater the in / Outpatients. It consists of several modules: Inventory Module, Investigation module, Pathology, Radiology, Blood Bank and Food and Dietetics department, Patientcare, Billing, Ward Management, General-Admin, Bed allocation, HR and Payroll to serve the patient efficiently.
Technologies	.NET Framework, VB.net, ASP.net, C#, Infragistics Net Advantage, SQL Server, Visual Source Safe, Crystal Reports XI and Windows operating system.
Responsibilities	● Involved in requirement understanding, designing, development, and peer reviewing. ● Developed architecture and design for key components. ● Created several POC for integrating tools and libraries. ● Mentored the reporting team to generate the reports using Crystal report. ● Designed the database model for transaction and dimensional using SQL Server. ● Designed windows-based applications using VB.net and .NET framework, I was involved in creating the forms, user controls and custom controls for the HMS applications. ● Designed the framework component using object-oriented programming. ● Used Infragistics Net Advantage 5.0 Web controls to suit the requirement and implemented Infragistics Data Grid and other controls. ● Executed Unit Test Case and Test Plan for the testers.

Company/Client	Emerging Solutions/ Client is a leader in the media & publishing industry in India.
-----------------------	---

Duration	Apr 2005 – Sept 2006
Role	System Analyst
Project overview	Project involved the development of a desktop application.
Technologies	.NET Framework, ASP. Net, SQL Server, VB, Oracle 8i, Visual Source Safe, IIS 5.0 and Windows operating system.
Responsibilities	● Involved in requirement understanding, designing, development, and peer reviewing. ● Developed architecture and design for key components. ● Created several POC for integrating tools and libraries. ● Created several web applications using ASP. Net and .NET framework. ● Built the window application using VB and Oracle 8i as a backend. ● Worked as core developer to build complex forms and reusable components.

Company/Client	Recreate Solutions/ Client is a leader in the media & publishing industry in India.
Duration	Mar 2004 – Apr 2005
Role	System Analyst
Project overview	The project's objective is to book the advertisement periodically on the respective pages in the daily or weekly newspaper. It involved other modules to generate the invoice and various reports using VB to design the desktop application.
Technologies	.NET Framework, ASP. Net, VB, Cold fusion, SQL Server, Visual Source Safe and Windows operating system.
Responsibilities	● Involved in requirement understanding, designing, development, and peer reviewing. ● Developed architecture and design for key components. ● Created several POC for integrating tools and libraries. ● Develop Technical Design based on Functional Design. ● Designed GUI presentation tier using ASP.NET 1.1. ● Analyzing impact of changes across modules/functional areas and on end users. ● Designed GUI presentation tier using VB 6.0. ● Coded Store Procedure, function and Triggers using SQL Server 2000. ● Created Reports using Crystal Reports 7.0. ● Involved in the Data Import process FOXPRO to SQL SERVER 2000. ● Importing Excel data into SQL Server 7.0.

	● Coded Data Access components using ADO, for data access from SQL Server 2000. ● Configuration Visual SourceSafe adding projects and giving rights the team members. ● Unit Testing and test plan for the testers. ● Perform thorough Unit and Regression Testing on all the changes. ● Responsible for creating Set up. ● Implemented the system\ changes on the production server. ● Designed the web pages using Cold fusion 4.5.1. ● Responsible for creating Project Manual. ● Responsible for database backup, Project backup. ● Responsible for Project Sign Off.
--	--

Company/Client	ESoft Technologies/ Evergreen engineering, Atco controls (I) Pvt Ltd. Kopran Ltd.
Duration	May 2000 – Apr 2004
Role	System Analyst
Project overview	Project involved the development of several projects on using different technologies, I was involved in several web applications and desktop applications as well. I was also part of O2, an ERP system and served several clients in Mumbai, India.
Technologies	PowerBuilder, Asp, Cold Fusion, PHP, My SQL, SQL Server, Sybase and Windows operating system.
Responsibilities	● This involved Development / Customization of Accounts, Inventory, Production, Excise, Exim, Costing, Planning Modules. ● Fixing the front end (PowerBuilder 5.0, 7.0 codes) and backend code involving stored procedures and database triggers among others. ● Migration of All the modules from PowerBuilder 5.0 to Power Builder 7.0 and Database from Sybase SQL Anywhere 5.0 to Sybase Adaptive Server 6.0 in phase I. ● Once more Data base conversion from Sybase Adaptive Server 6.0 to IBM DB2 v8.0 in phase II. ● Developed custom Data window reports (cross tab, nested and composite) in PowerBuilder using the layout specified. ● Wrote User Document and Functional Document for the above applications. ● Designed the database model for transaction and dimensional using SQL Server. ● Worked on multiple projects at given time.

	● Responsible for creating reports and writing the stored procedures. ● Created Cursors and used it through Power Builder. ● Developing Visual and Non-Visual user objects.
--	---

Education

- Bachelor of Art, St. Andrews College, Gorakhpur, India.
- PGDCA, Bits Computers, Gorakhpur, India

Honors and awards

- Certificate of Excellence, PFML – Employment Security Department, Washington, USA
