

PRUDHVIRAJ B

Frisco, Texas, USA

Senior SAP Data Migration Consultant | 11+ Years of Experience | S/4HANA Migration Expert

PROFESSIONAL SUMMARY :

SAP Certified Data Migration Consultant with over 11 years of expertise in designing and executing large-scale SAP data migration strategies using SAP BODS, LTMC, and IDOCs. Proven track record across industries—life sciences, telecom, utilities, and FMCG—executing complex legacy-to-S/4HANA data transformation. Adept at building robust ETL pipelines, managing cutover execution, validating master and transactional data, and ensuring seamless go-lives through rigorous mock runs and quality control.

Targeting a role as Senior SAP Data Migration Consultant (S/4HANA) where I can leverage my deep BODS, DMC, and IDOC processing skills to drive business value in S/4HANA transformation programs.

TECHNICAL SKILLS & TOOLS:

- SAP Data Migration: End-to-end SAP S/4HANA migration using SAP BODS, Data Migration Cockpit (LTMC/LTMOM), LSMW, IDOCs, and BAPIs.
- ETL Development & Performance Tuning: Advanced ETL job design, optimization, and workflow orchestration using SAP BODS.
- IDOC Processing: Hands-on experience with inbound/outbound IDOCs for master and transactional data loading, error resolution, and integration with SAP MDG and ECC/S/4HANA.
- SAP Master Data Governance (MDG): Integration with BODS and S/4HANA for cleansing, enrichment, and governed data onboarding.
- Cutover Execution: Strategy, job sequencing, mock cutovers, real-time monitoring, post-load validation, and hypercare support using SQL, InfoSteward, and logs.
- S/4HANA Migration Projects: Greenfield and brownfield implementations across versions (1610–1909), configuration and execution using LTMC/LTMOM.
- Master & Transactional Data: Strong experience across Customer, Vendor, Material, AR/AP, GL, Asset, WBS, Orders, Cost Centers.
- Validation & Audit: Built reconciliation frameworks, automated exception checks, audit logs, and validation reports.
- SAP Landscape: Experience across ECC, S/4HANA, MDG, BW landscapes.
- Tools & Platforms: SAP BODS, Information Steward, LTMC, LSMW, SQL Server, Oracle, DB2, Excel, Power BI, SharePoint, JIRA.

CERTIFICATIONS:

- SAP Certified Application Associate – SAP BusinessObjects Data Services

PROJECT EXPERIENCE:

Lumen Technologies (April 2024 – February 2025)

- Loaded Vendor Master, Material Master, Purchase Info Records, and Accounts Receivable into SAP S/4HANA using SAP DMC.
- Extracted and profiled legacy data to align with SAP data structures for material master records.
- Performed data harmonization and deduplication for vendor and customer master records.
- Validated and transformed material data to meet SAP MM and SD requirements.
- Configured mapping rules and transformations in SAP Data Services for Purchase Info Records.
- Developed automated reconciliation reports for vendor and material data post-load.
- Conducted pre-load validations using data profiling techniques to identify anomalies.
- Created data load templates for AR open items with necessary transformation logic.
- Led defect resolution cycles across SIT/UAT phases for data inconsistencies.
- Collaborated with functional SMEs to validate field mappings for critical fields.
- Ensured GDPR-compliant handling of personal data during customer data migration.
- Built audit trails and documentation for each object load in line with project compliance.
- Performed trial loads and delta load simulations for performance testing.
- Facilitated mock cutovers and cutover planning for load execution timelines.
- Optimized job execution and parallelism in SAP BODS for large volume loads.
- Implemented quality gates and control points to ensure data integrity.
- Integrated SAP DMC with SAP BODS for seamless data push to S/4HANA.
- Managed defect triage meetings and assigned fixes in sprint-based cycles.
- Created cross-reference tables to map legacy codes to SAP standard values.
- Published final load reconciliation reports to stakeholders with exception summaries.

Abbott Laboratories (Feb 2022 – April 2024)

- Loaded Vendor and Material Master data from legacy system to SAP S/4HANA.
- Configured SAP Data Services for rule-based cleansing of vendor records.
- Mapped legacy material attributes to SAP material types and valuation classes.
- Standardized vendor bank details and address components across geographies.
- Created ETL jobs to handle business rule validations and transformation logic.
- Conducted mass data uploads via IDOCs and validated acknowledgment receipts.
- Developed impact analysis for legacy material discontinuation scenarios.
- Built S/4HANA-aligned structure for plant-specific material data.
- Led data readiness assessments and provided feedback to data owners.
- Integrated external classification systems for advanced material classification.
- Prepared test load results for material master records with transformation logs.
- Assisted in design of DQM checkpoints for proactive data quality monitoring.
- Delivered end-user training on data cleansing and load tracking procedures.
- Collaborated with global teams to align data formats and naming standards.
- Reviewed duplicate detection algorithms and adjusted fuzzy match thresholds.
- Ensured regulatory data fields were complete before material master load.
- Validated purchase org assignments and accounting views for each material.
- Generated automated master data extracts for business validation.
- Participated in mock runs to verify extract-load-transform performance.
- Reported project metrics including load success rates and issue turnaround.

Gilead Sciences (March 2021 – February 2022)

- Executed SAP S/4HANA Greenfield migration for Customer Master and AR via LTMC, and Sales Orders via IDOCs.
- Built scalable ETL frameworks with embedded validation and reconciliation.
- Supported iterative mock loads, dependency analysis, and cutover sequencing.
- Delivered mapping documentation, audit tracking, and defect management.
- Conducted full cutover planning including dry runs, timeline setup, job monitoring, post-load sign-offs, and hypercare incident resolution.

- Created reusable SAP BODS job templates for recurring migration activities.
- Handled partner functions, customer hierarchy, and reconciliation in target system.
- Performed field-level data validations and business rule enforcement.
- Developed dashboards for tracking open issues and migration status.
- Coordinated with functional and technical teams for real-time data remediation.
- Executed multiple trial loads to validate transformation logic and mapping.
- Handled sensitive business data in compliance with corporate data standards.
- Developed post-load reconciliation and sign-off reports for each object.
- Ensured smooth transition during go-live through continuous data monitoring.
- Resolved inbound IDOC errors for sales and customer master data.
- Handled customer segments, pricing terms, and tax indicators in migration.
- Participated in steering committee updates with data quality KPIs.
- Enhanced BODS workflows for improved job performance and traceability.
- Generated audit-compliant logs for each object migration cycle.
- Created lessons learned document for future migration phases.

IKEA Global (May 2019 – March 2021)

- Led SAP data migration for Material and Vendor Master using LTMC, and Customer and Sales Orders using IDOCs.
- Developed complex delta logic, lookup mapping, and real-time interface handling in BODS.
- Coordinated mock cutovers, cutover checklists, and business readiness tracking.
- Delivered cutover validation scripts, control tables, and root cause analysis dashboards.
- Participated in global data council meetings for UAT sign-offs.
- Managed SAP cutover with full-cycle planning, dependency alignment, IDOC reconciliation, and real-time execution updates to business.
- Designed reconciliation logic for inventory and master data post-load validation.
- Conducted dry runs to align business teams on cutover milestones.
- Provided data extracts and mapping sheets for business validation.
- Improved cutover runbook with risk flags, job priorities, and fallback steps.
- Optimized IDOC processing queues and exception handling workflows.

- Conducted field-by-field transformation validation with business teams.
- Delivered training sessions on data tracking using validation reports.
- Managed multi-language data transformation for global template alignment.
- Created dashboards to track mock load results and issue resolution timelines.
- Validated sales order pricing structures and partner functions.
- Managed UAT defect fixes and revalidation cycles with SMEs.
- Produced comprehensive data migration sign-off packages.
- Handled material classification replication across business areas.
- Maintained structured documentation for audit and reuse.

SaskTel Canada (IFRS15) (May 2018 – May 2019)

- Managed transformation and migration of IFRS15 financial data to SAP HANA.
- Developed ETL jobs to manage complex data mappings and staged reconciliations.
- Built cutover load books, validation reports, and worked with finance SMEs to ensure readiness.
- Created PowerShell-based job monitors and alert systems for nightly loads.
- Led cutover cycle preparation, created dependency mapping across financial modules, coordinated dry runs, and supported hypercare defect resolution.
- Prepared and validated IFRS revenue allocation structures based on contract terms.
- Created reconciliation dashboards for deferred vs recognized revenue.
- Mapped legacy finance data to new revenue standard formats.
- Handled post-load validation and audit reporting.
- Delivered structured documentation for audit readiness and compliance sign-off.
- Worked closely with SAP FI and CO teams to align mappings.
- Reviewed error logs and monitored reconciliation failures daily.
- Enabled real-time alerts for cutoff dates and compliance targets.
- Created staging areas and snapshot backups for load validation.
- Supported external audit reviews with backup documentation.
- Enhanced exception reporting framework to ensure audit coverage.
- Coordinated business sign-off on each IFRS attribute transformation.

- Delivered error resolution reports and supported defect triaging.
- Validated GL accounts and cost object mappings.
- Performed reconciliation of contract asset and liability balances.

Coca-Cola Refreshments, NA (CCR) (April 2014 – May 2018)

- Performed legacy to SAP ECC data migration from Salesforce and Teradata.
- Built reusable BODS ETL jobs, IDOC integrations, and BAPI triggers for SAP data uploads.
- Migrated Customer Master using IDOCs and Material Master using LSMW.
- Created validation rule sets in Excel, SQL, and Information Steward.
- Executed mock cutovers, monitored job errors, and supported defect triage and UAT support.
- Designed and executed full cutover strategy including mock validations, job sequencing, live load monitoring, and user coordination for post-load confirmation.
- Configured source-to-target field mappings and cleansing logic.
- Built real-time reconciliation dashboards for post-load verification.
- Provided support for multiple mock cycles and final go-live validation.
- Reviewed transactional dependencies for customer-material relationships.
- Worked with business SMEs to define acceptable values and transformations.
- Documented every step of the migration lifecycle for audit readiness.
- Improved batch performance by implementing delta logic.
- Managed issue logs and status updates in daily cutover meetings.
- Coordinated dry run outputs with end users for sign-off.
- Provided support for language-dependent field migration.
- Handled custom object loads with scripting logic in BODS.
- Developed fallback plans and re-run conditions for load errors.
- Consolidated legacy datasets for archive and backup before migration.
- Generated cutover summary reports and KPIs for project closure.

EDUCATION Bachelor of Engineering in Electronics and Communications Jawaharlal Nehru Technological University (JNTU), Hyderabad
