EXPERIENCE

Zelis

12/2022 - 01/25

Business Analyst

- Collaborate with product managers to gather and document business requirements for Claims Editing initiatives
- Write clear and concise user stories by translating business requirements into technical requirements
- Ensure user stories have well-defined acceptance criteria and ready for development
- Create and maintain Agile artifacts which could include but are not limited to workflows/diagrams, user stories, spikes, Release Notes and User Guides
- Facilitate communication between technical and non-technical teams to ensure alignment and understanding
- Assist with the refinement of user stories in the backlog in JIRA
- Deliver presentations and reports to the Product Manager on product performance and project status
- Assist in providing training to end users on newly released items
- Monitor product performance and user feedback to identify areas for improvement and optimization

Senior Business Analyst

- Worked with the BCBS of North Carolina on various implementation projects.
- Provides cost effective business systems and applications analysis in support of the development and implementation of business applications.
- Includes evaluation, analysis, documentation of requirements, translation into proper system requirement specifications and configuration.
- Formulates and defines systems scope and objectives based on both end-user needs and a thorough understanding of business systems, applications and industry requirements.
- Conducts business process analyses, needs assessments, and preliminary cost/benefits analyses to align information technology solutions with business initiatives.
- Operates as a liaison between technical personnel and the end-users.
- Trained end users with new technology and enhancements using all appropriate communication tools.
- Defines overall application functional / business requirements with end users.
- Recommended solutions, modifications, configurations, and processes.
- Analyzes model test discrepancies to find trends and works with programmers to resolve.
- Produces business process flow charts, communications, presentations and other materials for knowledge transfer to system users and potential clients.
- Analyzes and evaluates application requirements to determine appropriate systems software solutions.
- Participates in implementation, roll out, migration, integration, upgrades, testing, performance tuning, research and development.
- Documents procedures for installation and maintenance. Incorporated state-of-the-art concepts and practices to facilitate system functionality and facilitate continuous improvement.
- Assists in creating the strategic technical and architectural direction to the programming / application function.
- Point of contact between IT and key business users / senior leadership in defining IT solution based on business needs.
- Serves as technical consultant to senior leadership in the client's IT organization and functional user groups. Assisted in driving changes in application architecture, methodology or programming procedures

Business Analyst/Plan Advocate Consultant

- Ensured tickets in JIRA were worked appropriately based on severity.
- Build relationships, communicate, share priority/urgency, & work as a team with NDT/PST Technical resources.
- Function as the secondary NDT Point of escalation for Plan tickets to all entities (Plan or NASCO).
- Provide escalation notifications to Sr. Management within the same business day, as needed.
- Prevent known critical and high severity defects from moving into an SLA environment by escalating to Client Delivery and NDT Management, as needed. (after escalation plan)
- Understand the technology used to deliver function/business value of the Product or Service.
- Attend and represent NDT at Product/Service User group calls and meetings.
- Participate in process improvement & initiative activities, as requested.

- Identify processes and procedures that improve ticket delivery, as evidenced by cost reduction, schedule improvement or enhanced customer satisfaction.
