

Hydar Hussain

Sr. Full Stack Developer

 hydarhussainus@gmail.com

 +1 469-712-7556

 [Hydar-Hussain](#)

 Dallas, Texas

PROFESSIONAL SUMMARY :

- Experienced **Full-Stack Engineer** with **7+ years** in enterprise application development across industries like **E-commerce, Insurance, and Healthcare & Financial Services**.
- Expertise in backend development using programming languages **Java (J2EE), Python, .NET, C#, Node.js, Golang** and **Kotlin**, with hands-on experience in building scalable microservices using **Spring Boot, Hibernate, JPA, Security, and Spring WebFlux**.
- Proven experience designing **RESTful/SOAP (JSON/WSDL/XML) APIs** following modern design patterns and best practices, with a solid understanding of API lifecycle management and event-driven service architecture.
- Strong front-end development experience using **React, Angular, Ruby on Rails, Vue.js, and TypeScript** with expertise in building responsive and dynamic user interfaces (UI) using **HTML5, CSS3, JavaScript, Bootstrap, AJAX, ReactJS, Redux and GraphQL**.
- Extensive hands-on experience with NoSQL (e.g., **Cassandra, ScyllaDB, Elasticsearch, Redis, MongoDB, DynamoDB, Neo4j, Firebase**), relational (**Oracle PL/SQL, or Teradata, MySQL, PostgreSQL, RDS, Cloud SQL**), and NewSQL (**CockroachDB, DB2, OrientDB**) databases across diverse cloud and on-premises environments.
- Hands-on experience with **AWS services** including **EC2, S3, Lambda, RDS, VPC, IAM, CloudFormation, Route 53, CloudWatch, SNS, SQS, EKS, ECS, ELB**, and Auto Scaling for infrastructure provisioning, monitoring, security, and automation.
- Strong understanding with **Microsoft Azure services** including **Azure DevOps, Virtual Machines, Blob Storage, Azure Functions, Azure SQL Database, Virtual Network (VNet), Azure DNS, Application Gateway, Azure Monitor, Event Grid, Logic Apps, Azure DevOps, and Resource Manager (ARM)** templates for cloud infrastructure, automation, and monitoring.
- Designed and implemented robust Continuous Integration/Continuous Deployment (CI/CD) pipelines using tools like **Jenkins, Jira, GitHub Actions, and GitLab CI**, automating build, test, and deployment processes; integrated containerization with **Docker, JFrog** and orchestrated scalable deployments via **Kubernetes**, SonarQube across hybrid cloud environments including **AWS (CodePipeline, CodeBuild, EKS), Azure DevOps (Pipelines, AKS), and Google Cloud (Cloud Build, GKE)** increasing deployment reliability.
- Implemented end-to-end monitoring, logging, and alerting solutions using **AWS CloudWatch, Azure Monitor, and Google Cloud Operations Suite (Stackdriver)**; integrated tools like **Prometheus, Grafana, and ELK Stack** to visualize system metrics, proactively detect anomalies, and optimize infrastructure performance.
- Built event-driven architectures using **Apache Kafka, AWS SQS/SNS, Google Pub/Sub, Amazon MQ, IBM MQ on OpenShift** and **Azure Service Bus**, ETL tools enabling reliable, scalable message processing across distributed systems and improving system resilience.
- Implemented comprehensive testing strategies across the software development lifecycle, utilizing frameworks such as **Jest, Enzyme, React Testing Library, Cypress, Playwright, JUnit, NUnit, PyTest, Cucumber, and Karma** for **unit, integration, and end-to-end (E2E) testing**; conducted API testing with **Postman** and **RestAssured**, incorporated mocking tools like **WireMock, Mockito, and Moq**, and ensured code quality and coverage through **SonarQube, K6, and LoadRunner**.
- Designed and architected **highly scalable, fault-tolerant, and distributed systems** using **microservices architecture, event-driven patterns, and RESTful APIs**; implemented **load**

balancing, caching layers (Redis, Memcached), database sharding, and horizontal scaling to ensure performance, availability, and maintainability across large-scale enterprise applications.

- Developed and automated Immuta policy pipelines using **Python**, enabling seamless implementation of **OLAP & OLTP security** models within **Databricks** and **Snowflake**; enforced **row- and column-level security** in alignment with enterprise **data governance** and compliance standards (**GDPR, HIPAA**).
- Automated policy updates and client access controls using **Jenkins, Ansible, Terraform**, and **ServiceNow**, integrating with CI/CD pipelines to streamline **change management** workflows and ensure consistent, audit-ready deployment of **data security policies** across cloud platforms.
- Experience working in agile development environments, with a solid understanding of Software Development Life Cycle (SDLC) and Scrum/Kanban practices.
- Scoped and led delivery of **enterprise-grade data governance and privacy solutions**, leveraging microservice based architectures, metadata-driven pipelines, and role-based policy enforcement. Mentored junior engineers and guided cross-team **design reviews and architecture discussions**, promoting consistency in patterns like **Domain-Driven Design (DDD), BFF**, and **GraphQL APIs**.
- Automated operational workflows using **Python, Airflow**, and CI/CD pipelines, improving data orchestration efficiency and reducing deployment errors across multi-cloud environments. Designed reusable **frontend components** using **React, MUI**, and **TypeScript**, integrating with secure backend APIs to deliver intuitive, scalable user interfaces. Applied **SRE best practices** and implemented monitoring using **Grafana, Dynatrace**, and **Azure Monitor**, improving observability and reducing MTTR by 40% across production systems.

TECHNICAL SKILLS :

LANGUAGES	Java/J2EE, C++, C#, Kotlin, Python, JavaScript, TypeScript, .NET, NodeJS, React, Angular, Ruby on Rails, GraphQL, Vue.js, CSS3,
TOOLS & FRAMEWORK	Spring JPA, Hibernate, Spring MVC, Spring IOC, WebFlux(Mono/Flux), JMS, Log4J, JUNIT, JMock, Spring Boot, Cucumber, Django
JAVASCRIPT TECHNOLOGIES	AngularJS, Angular 8, NodeJS Graph QL, Angular ngrx & Angular rxjsj, Query, EXT.js, Backbone.js, Require.js, React, Redux
DATABASE	Oracle, MySQL, SQL, PL/SQL, OrientDB, Snowflake, PostgreSQL, JDBC, ElasticSearch, LDAP, S3, EBS, Colibra, MongoDB, Redis
VERSION CONTROL	Git, GitHub, GitLab, Bitbucket, AWS CodeCommit, Azure Repos, SVN & Perforce
CLOUD	AWS, Microsoft Azure, Google Cloud Platform (GCP), IBM Cloud, Oracle Cloud
BUILD, LOGGING & PIPELINE	MAVEN, GRADLE, Log4J, Jenkins, GitHub Actions, GitLab CI/CD, Azure Pipelines, CircleCI, Travis CI, Bamboo, SonarQube (quality), ELK Stack (ElasticSearch, Logstash, Kibana), Fluentd, Prometheus + Grafana, CloudWatch, Splunk, New Relic, Datadog
WEB SEVERS	WebSphere, WebLogic, Jetty, JBoss, Tomcat, Nginx, Apache HTTP Server, Microsoft IIS, Express.js
DEVELOPMENT TOOLS	VS Code, IntelliJ IDEA, PyCharm, Eclipse, WebStorm, Postman, Swagger UI, Docker, Kubernetes, Terraform, Ansible, Vagrant, Fiddler, GitLens, Immuta, Colibra, Databricks & Snowflake

Deployment Tools	Helm, ArgoCD, Spinnaker, Octopus Deploy, AWS CodeDeploy, Azure DevOps, Google Cloud Deploy, Capistrano, Ansible, Chef, Puppet, Scala, BigPanda
------------------	--

EXPERIENCE :

Company: **The Cigna Group**

Role: **Sr Full Stack Engineer**

July 2023 - Present

- Developed and maintained an **Immuta policy pipeline** to automate data access policies, ensuring row-level and column-level security using **Databricks** (Spark + Unity Catalog) and **Immuta** (software as a service/SaaS) for enterprise data governance.
- Automated nightly synchronization of client access restrictions using **Jenkins**, enhancing data security compliance and improving data refresh rates.
- Designed and implemented data access controls leveraging **Okta** and **Active Directory** for secure identity and access management (IAM), integrating with **OAuth1/OAuth2** for token-based authentication.
- Managed end-to-end data processing using **Spark**, **Hive**, and **SQL** to handle large-scale data sets and enforce cross-tenant data access restrictions.
- Integrated **ServiceNow** with the Immuta pipeline to establish a structured approval process for policy updates, ensuring controlled policy changes and compliance with business rules.
- Developed and tested automation scripts in **Python**, **C#** and **Scala** to streamline data ingestion and apply dynamic policy changes based on user attributes and access roles.
- Implemented version control and change management using **Git** and automated deployment pipelines via **Jenkins** to ensure traceability and controlled production releases.
- Enhanced monitoring and logging capabilities using **Splunk** and **AWS CloudWatch**, providing real-time insights into data access patterns and policy enforcement.
- Established and maintained secure access controls for internal and external users through **RACF** and **LDAP**, ensuring proper segmentation of data and restricted access to sensitive information.
- Leveraged **Docker** and **Kubernetes** to containerize and deploy microservices for managing policy updates and data synchronization processes.
- Managed secure storage and retrieval of sensitive data using **HashiCorp Vault** and ensured privileged access controls through **CyberArk**.
- Collaborated with cross-functional teams using **JIRA** and **Confluence** to document processes, track changes, and align on data governance strategies.
- Designed semantic views and base tables in **Databricks** and **Snowflake** to enforce row-level security, ensuring users only access non-restricted data based on their profile attributes.
- Reduced access review and approval workload by implementing attribute-based access control (ABAC) using **Okta** and legacy subsidiary identifiers to automate user permissions.
- Developed and validated analytical security policies in **Databricks** to ensure proper segmentation of cross-tenant data while maintaining regulatory compliance.

Tools & Technologies: Immuta, Databricks, SQL, Okta, OAuth, JWT, Python, ServiceNow, RACF (Resource Access Control Facility), Splunk, Jenkins pipeline, Docker, Kubernetes, Postman, Confluence, JIRA, Git & LDAP (Lightweight Directory Access Protocol).

Company: **Mindtree Limited**

Role: **Java Developer.**

Dec 2020 - Dec 2021

- As a **Java EE** developer with expertise in designing and developing applications using **MVC, Factory, Delegate, and Singleton** design patterns.
- Designed and maintained microservices based applications using **Spring Framework, Spring Boot, Spring Integration, Spring WebFlux (Mono/Flux)** and **Spring Data** – integrated services through **REST** and **AWS SQS**.
- Built and deployed containerized Spring REST services on **AWS EC2** using **Docker** and automated execution with **AWS Lambda**.
- Hands-on experience with **GCP, Azure & AWS services** – **EC2, SQS, CloudWatch, SNS, S3, and Lambda** for real-time and historical data ingestion and monitoring.
- Developed CI/CD pipelines using **Jenkins** and **Maven** for scanning, building, testing, and deploying APIs (Apigee Gateway) and Lambda functions.
- Created dynamic and responsive user interfaces using **HTML5, CSS3, JavaScript, TypeScript** and **Bootstrap** – leveraged **jQuery** for DOM manipulation.
- Managed version control and branching using **Git** – implemented Git branching strategies for streamlined code integration.
- Developed and optimized **Snowflake** and **Oracle** stored procedures, functions, triggers, and views – performed SQL & TSQL tuning to enhance response times.
- Automated builds using **Maven** and deployed on **WebLogic Application Server** – tested JSON output with **Postman** and **Advanced REST Client**.
- Experience with Continuous Integration Delivery Automated Testing/deployment tools such as NUnit and JUnit, Mockito, Gradel & Maven
- Documented and updated project designs on **Confluence** to align with project standards and address bugs.
- Collaborated with offshore teams following **Agile** methodologies – derived mock data to test prebuilt applications and resolve client issues.
- Skilled in containerization using **Docker** – managed Docker components like **Docker Engine, Docker Hub, and Docker Registry**; deployed **Chef-Server** on AWS.
- Working Knowledge of healthcare data standards such as FHIR, HL7 and expertise in Identity Access Management (IAM).

Tools & Technologies: J2EE, Kotlin JVM, Spring framework, Spring Boot, Spring WebFlux, JDK/1.8, Design Patterns, JPA, JDBC, Jenkins, Web Services, TypeScript, Angular 8, WebLogic 10.1, Kafka, REST 1.3.0.0, EJB, Hibernate 4.3, RESTful, Snowflake, Maven, JUnit, Agile Methodology, Jira, GIT, AWS SQS, AWS Lambda, AWS IMS, AWS EC2.

Company: **Cognizant Technology Solutions**

Role: **Programmer Analyst**

May 2018 - Dec 2020

- Designed, developed, and tested applications using **Spring MVC** and **Spring Boot** – implemented the **MVC** pattern to streamline business logic and user interface interaction.
- Deployed **Spring Boot-based microservices** in **Docker** containers using **AWS Admin Console** – configured storage on **AWS S3** and deployed on **AWS EC2** instances.
- Developed real-time data streaming pipelines using **Apache Kafka, RabbitMQ** and **Spark Streaming** – configured Kafka producers and consumers in **Java** to stream data to **HDFS**.
- Built dynamic user interfaces using **Angular 8, NodeJS, GraphQL/gRPC, JavaScript, HTML5, jQuery, and CSS3** – enhanced client-side functionality with JavaScript-based validations.
- Developed business logic using **Spring modules** and managed data access with **Hibernate** – implemented the **DAO** pattern for **MS SQL Server** and **Oracle** databases.

- Created and secured RESTful APIs using **Spring Boot, Spring Cloud, Spring Security, and Spring Integration** – tested REST endpoints using **Postman**.
- Managed dependencies and automated builds using **Maven** – handled version control with **SVN**.
- Configured and managed **JDBC, JMS**, and clustered **EJB** objects on **WebLogic Server** for seamless communication and transaction handling.
- Wrote and maintained unit test cases using **JUnit** to ensure code quality and functionality.
- Worked in an **Agile (SCRUM)** environment – participated in daily stand-ups to track progress and assign tasks.
- Designed and architected **highly scalable and reliable distributed systems**, implementing **design patterns** to enhance system performance, fault tolerance, and maintainability.
- Implemented identity and access management (IAM) using Azure AD, explore and implement Generative AI (GenAI) models such as GitHub Copilot.
- Cloud-native deployment experience (AWS, GCP, Azure) and managing Kafka in cloud environments and expertise in monitoring and alerting tools such as Prometheus, Grafana, Confluent Control Center, and Dynatrace.

Tools & Technologies: Java, Spring, Spring Boot, Angular 8, NodeJS Graph QL/gRPC, ReactJS, jQuery, AWS, Log4j, Eclipse, Kafka, WebLogic, Maven, JUnit, SVN, Oracle 10g, MS SQL Server, Ajax, HTML, CSS.

Company: **Noah Technologies**

Role: **Software Engineer**

July 2017 - May 2018

- Designed, developed, and implemented **Oracle-based applications** to support enterprise data governance, ensuring compliance with business and security requirements.
- Developed and optimized **PL/SQL packages, procedures, functions, and triggers** to automate data policies and improve database efficiency.
- Led **Oracle database tuning and performance optimization**, including SQL & TSQL tuning, indexing strategies, and partitioning for large-scale data sets.
- Collaborated with cross-functional teams to gather and document technical requirements for **Oracle-based data access policies and security controls**.
- Monitored and enhanced database performance using **Oracle AWR, SQL Trace, and CloudWatch**, improving query response times and system stability.
- Developed and processed **Spring JDBC batch jobs** to retrieve customer auto loan transactions from **DB2, Teradata, and MySQL** databases.
- Utilized **Hibernate** for persistence layer, including Hibernate mappings with **Annotations, HQL, Criteria, and Queries** – implemented interceptors and built releases using **Spring Framework**.
- Leveraged **Spring AOP** for exception handling and **Spring JDBC Template** for data persistence.
- Designed and implemented **Microservices** using **Spring Boot** – enabled interaction via **RESTful APIs** (Apigee Gateway) and **Apache Kafka & RabbitMQ** message brokers.
- Used **JavaScript & Type Script** for client-side validations and **JSON** for server communication.
- Built web-based applications using **Hibernate 3.0** and **Spring Framework** – applied **IOC Dependency Injection** using the **Service Locator** design pattern.
- Managed asynchronous communication between application components using **Java Message Service (JMS)**.
- Gathered and documented business requirements for the **Accounting and Claims** modules – ensured alignment with business goals and technical feasibility.

- Developed scripts to extract data from diverse sources like databases, APIs, flat files, and Mainframe applications using AWS services like S3, RDS, and Kinesis.
- Worked on AWS ETL oracle Data migration experience (specific to Exadata) along with AWS DMS for delta workloads, AWS RDS Oracle & Oracle data loader
- Architect and implement robust ETL pipelines using AWS Glue, defining data extraction methods, transformation logic, and data loading procedures across different data sources

Tools & Technologies: Java, J2EE, Spring 3.0, Eclipse 4.3, JBoss 5.1/7.1, Kafka, My SQL & TSQL Workbench, DB2, Teradata, Hibernate, Core Java, Object Oriented Patterns, Object Oriented Design, jQuery, JavaScript, WebLogic.

EDUCATION :

- **Master's** in computer science, **Texas A&M University**, Commerce, Texas 2021-2023
- **Bachelor's** in computer science, Jawaharlal Nehru Technological University, India 2013-2017
