

PROFESSIONAL PROFILE

Accomplished Enterprise Data Integration Architect with over a decade of experience designing and delivering large-scale, cloud-native data platforms that power analytics, automation, and artificial intelligence initiatives. Proven expertise in architecting end-to-end data ecosystems leveraging Azure Databricks, Synapse Analytics, AI Foundry, and Microsoft Fabric to unify disparate data sources, optimize ingestion and transformation workflows, and enable real-time, AI-ready insights.

TECHNICAL SKILLS

ETL Tools: Microsoft SSIS, Azure Data Factory (ADF), Synapse Analytics, Microsoft Fabric.
Databases: SQL Server, Azure Synapse, Azure SQL Database, Oracle DB, Postgres, etc.
BI Tools: Power BI, Tableau, MSBI (SSAS, SSRS).
Data Modeling: ER Modeling, Data Flow Diagrams, Entity Relationship Diagrams (ERD).
Azure Integration Tool: Azure Databricks, Azure Synapse, Azure Data Factory (ADF).
AI & Machine Learning: Azure Machine Learning, AI Foundry, Azure AI Search
Performance Tuning: Indexing, Partitioning, Query Optimization, Parallel Processing
Programming/Querying language: SQL, PL/SQL, TSQL, Python, XML.
Querying Tools: SQL Management Studio, Teradata SQL Assistant, Azure Data Studio
Cloud Platforms: Microsoft Azure (ADF, Blob Storage, Azure SQL Database, Azure), AWS (S3, Redshift)
Collaboration Tools: JIRA, Azure DevOps, Confluence.
Agile Methodology: Scrum, Agile Development, Waterfall Methodology.

PROFESSIONAL EXPERIENCE

Dayforce, Remote.

Oct. 2021 - Present

Enterprise Data Architect

Project Description:

Intelligent Data Integration & AI-Ready Lakehouse Platform

Delivered an enterprise AI data platform on top of the Lakehouse, integrating Azure AI Foundry (hubs, projects, deployments) with agentic workflows and Model Context Protocol (MCP) servers/tools to safely expose enterprise data and actions to AI. Orchestrated RAG and tool-calling agents across Azure OpenAI / model gateway and Azure AI Services (Search w/ vector index, Speech, Vision) to enable real-time insights, forecasting, and personalized experiences - governed end-to-end for security, compliance, and observability.

Responsibilities:

- Collaborated effectively with IT and business units to align data architecture with evolving business demands, driving customer data management practice enhancements.
- Designed the agentic architecture: multi-agent patterns (planner/worker/guard), tool calling, and function routing via Azure AI Foundry; standardized agent templates and evaluation gates for production readiness.
- Implemented MCP servers/tools to safely expose enterprise capabilities (metadata search, finance, customer ops) as typed tools with policy checks, throttling, and audit logging.
- Built RAG pipelines over the Lakehouse using Delta + vector embeddings (Azure AI Search) with domain chunking, hybrid retrieval, grounding, and guardrails (prompt/response filters, PII redaction)
- Integrated AI services (Azure OpenAI, Azure AI Search, Speech, Translator, Vision) and API/event triggers (Event Hubs, Functions) to power forecasting, personalization, and automation use cases.
- Enabled self-service through reusable agent + RAG blueprints, CI/CD (Azure DevOps) for prompts/tools/pipelines, and comprehensive documentation (reference architectures, runbooks, lineage maps).

Apple Leisure Group, Remote.
Snr. Data Architect

Jun. 2018 - Sep. 2021

Project Description:

AI-Driven Data Modernization & Integration Platform

Delivered an enterprise-scale modernization program to unify hospitality, finance, and customer data into a cloud-native, AI-enabled Lakehouse on Azure Databricks, Synapse Analytics (Dedicated SQL Pool), and ADLS Gen2 - centralizing global data, automating ingestion/ELT, and establishing a governed foundation for machine learning, forecasting, and personalization at scale.

Responsibilities:

- Engaged with cross-functional business stakeholders to capture detailed analytics and data management requirements, translating them into enterprise-grade architectural blueprints.
- Architected the Lakehouse (bronze/silver/gold) on Databricks + ADLS Gen2 + Synapse, standardizing Delta Lake patterns for batch and streaming workloads.
- Built end-to-end ELT and streaming pipelines (ADF, Spark Structured Streaming, Databricks Jobs), with parameterized orchestration, modular notebooks, and CI/CD (Azure DevOps).
- Operationalized AI/ML using MLflow (model registry, lineage) and production scoring endpoints to support demand forecasting, personalization, and pricing use cases.
- Implemented governance & security - data quality rules, metadata/lineage (e.g., Alation), PII classification, and RBAC - supporting GDPR/PCI DSS compliance and auditability.
- Engineered Synapse Dedicated SQL Pool (SQL DW) for over 200 TB of curated data, applying partitioning, distributions, workload management, and query tuning.
- Enabled self-service analytics for ~250 users (finance, revenue, marketing) through governed semantic layers, data products, and role-based data access.
- Authored comprehensive solution docs - architecture diagrams, technical specs, data dictionaries, process flows, and mappings to align engineering, data science, and BI teams.

Bank of America, Baltimore MD.
Data Architect/Data Engineer

Aug. 2015 – Apr 2018

Responsibilities:

- Architected the target-state Azure data platform (Azure SQL Data Warehouse, Azure Data Lake Store, Azure Data Factory v2), defining canonical data models, partitioning/distribution strategies, and security patterns aligned to enterprise standards.
- Built & productionized metadata-driven ETL/ELT pipelines using ADF v2, Apache Spark (Databricks/HDInsight), Python, and SQL, implementing parameterization, retry/alerting, and SLA monitoring to reduce batch windows and improve reliability.
- Established governance & compliance by implementing data quality rules, catalog/lineage processes, RBAC, encryption (Key Vault), and audit controls to support SOX, CCAR, and GDPR requirements across Global Corporate & Investment Banking.
- Enabled analytics modernization by optimizing warehouse performance (workload management, query tuning), standardizing KPIs/semantic layers for finance reporting, mentoring junior engineers, and delivering comprehensive architecture and data documentation.

SOFT SKILLS

- Time Management
- Interpersonal Skills
- Teamwork
- Problem-Solving
- Detail Oriented
- Excellent Verbal/Written Communication
- Strategic Planning
- Self-Organized

EDUCATION

May 2006 - May 2011	Bachelor's Degree in Computer Science, Crescent University	Abeokuta, Nigeria
Aug 2022 - Aug 2022	Certified SSIS Developer (C.O.C), Udemy	E-Learning
Aug 2022 - Sep 2022	Certified Data Warehouse Developer (C.O.C), Udemy	E-Learning
