SUMMARY

I am a Full-stack engineer with over six years of experience designing, developing, and deploying applications across various industries. I specialize in both front-end and back-end development, ensuring efficient project delivery. I've led large-scale projects, mentored junior developers, and improved performance by 90%. With experience in both startups and enterprises, I thrive in both independent and team environments. I'm always learning and staying up to date with the latest technologies to drive innovation and exceed client expectations.

SKILLS

Server Side: Python, Django, Flask, FastAPI, Django Rest Framework, RESTful API Design, Celery, GraphQL, JWT/OAuth, Channels, Machine Learning, OpenCV, ORM, SQLAlchemy, Node.js, SciPy, NumPy, Kotlin, Elixir, Maven, Gradle, Hibernate

Client Side: React.js, JavaScript (ES6), Vue.js, Angular, jQuery, HTML5, CSS, Tailwind, Bootstrap, Redux, TypeScript, Socket.io, Next.js, Webpack, CSS3

Database: PostgreSQL, MySQL, MongoDB, GraphQL, Redis, SQL, NoSQL

Cloud services: CI/CD pipelines, GitLab CI, Docker, Kubernetes, Heroku, Jenkins, Travis CI, AWS (EC2, ECS, EBS, Lambda, S3, RDS, CloudWatch), AWS CodePipeline, Bitbucket, Datadog, New Relic, GCP, Digital Ocean, Terraform

DevOps: AWS, CloudFront, Lambda, Docker, Jenkins, API Gateways, Event Bridge, CI/CD Pipelines, AWS, Cloud Watch, Datadog, Google Cloud Functions

Tools: Jira, ClickUp, Figma, Trello, GitHub, GitLab, Bitbucket, Visual Studio Code, PyCharm, Eclipse, IntelliJ, Tomcat, Postman, Swagger, Workbench, Kafka, RabbitMQ

Misc: Agile/Scrum, Performance optimizations, Version Control (Git), Bash Scripting, Pinecone, Pytest, Jest, Selenium, ETL, Microservices, TDD, Kanban, TestCafe, Rspec, Cypress, API, RESTful APIs, Microservice

WORK EXPERIENCE

OHRG	Senior Full Stack Engineer	2021 - Present
- Leading a team of four engineers to design and maintain web applications using Python, Django, Flask, and React, resulting in a 42% boost in productivity and a 17% reduction in development cycles. - Utilized Agile methodologies and object-oriented design in Python, REST, SOAP, JavaScript, and React, enhancing development velocity by 32% and reducing time-to-market by 18%. - Demonstrated expertise in React.js for frontend development and MongoDB for database management, improving application performance and data management efficiency by 22%. - Utilized Git for version control and GitHub for project management, reducing deployment errors by 38%. - Developed robust database architectures with Postgres and MySQL, increasing query performance by 33% and extended the build system, cutting performance issues by 50% - Implemented DevOps practices and CI/CD pipelines with Jenkins, improving code quality by 28% and reducing deployment time by 60%. - Generated comprehensive reports in TXT, CSV, XML, and JSON formats by extracting data from MySQL, streamlining company processes and ensuring continuity. - Engineered serverless solutions using AWS, Azure, and Lambda, enabling scalable operations and cutting operational costs by 52%.		

Enara Health**Senior Software Engineer****2020- 2021**

- Engineered scalable applications using Python with Django and Flask, alongside React.js, Node.js, Express.js, and MongoDB, which raised development efficiency by 27%.
- Developed a web application using Flask for the backend and React/Next and Vue.js for the frontend, leading to a 23% improvement in application performance and efficiency.
- Leveraged Docker and Kubernetes to streamline deployment processes, cutting deployment time by 55% and enhancing reliability by 42%.
- Directed a team in developing REST APIs with Python to enable smooth communication between frontend frameworks and web applications, boosting data transfer efficiency by 32%.
- Introduced automated testing frameworks that reduced bug incidents by 42% and increased overall system stability by 48%.
- Deployed applications to AWS, Kubernetes, and Heroku, achieving a 47% improvement in scalability.
- Cooperated with cross-functional teams to troubleshoot issues, perform application profiling, and optimize performance, resulting in a 28% rise in system efficiency.

Fund That Flip**Software Engineer****2019 - 2020**

- In Python, RESTful, SOAP, and JavaScript, our process sped up project delivery by 28% and improved code maintainability by 12%.
- Improved security by reducing vulnerabilities by 60% through better authentication and authorization methods.
- Created user interfaces using Bootstrap, Tailwind CSS, and Material UI, which decreased bounce rates by 15%.
- Built front-end features with AngularJS and React, leading to a 13% increase in user engagement and satisfaction.
- Used OAuth, JWT, and Spring Security for authentication, cutting unauthorized access incidents by 45% and boosting overall security by 28%.
- Designed data storage using MySQL, PostgreSQL, MongoDB, and DB2, which increased data retrieval speed by 32%.
- Connected cloud services such as AWS S3 and Google Drive, reducing file storage and retrieval time by 22%.

EDUCATION

Bachelors
