Professional Summary

Overall experience in Quality Engineer with extensive experience in Pharmaceutical/Biotechnological Industries, seeking a challenging position to contribute my expertise in batch record review, disposition, label printing, product packaging, and shipping. Adept at CAPA, Change Controls, and compliance in cGMP environments. Proven ability to support product manufacturing and enhance quality management systems. Hands on experience from raw materials, inspections, in-external auditing, Device history reviews, process monitoring, SOP writing, Nonconformance, SCAR reporting, and KPI tracking and trending. Proficient in Six Sigma (Greenbelt certified); leading and supporting audit teams, including using some of the tools to determine if further investigation is needed.

Sr Quality Engineer, Bioscience, Inc- Dallas, Tx

Jun 2024 to Present Synergy

- Coordinate and establish quality system documenta on, aligned the requirements of 21 CFR part 11, 210,211,600 and 820 as well as ISO17025.
- Developed and implemented quality control audit plans, performed internal audits, and led annual external audits (Customer, process, and ISO 9001:2015 external audits).
- Prepare and present quality audit reports and respond to external audits to management.
- Analyzed customer complaints data, reported trends, and provided quality solutions for customer returns and service requests.
- Develop, document, maintain, and improve the business's quality management system.
- Control and monitor system performance and ensure conformance to established standards necessary to maintain product quality and sustainable customer satisfaction (right parts on time).
- Identify and drive business efficiencies and improvements related to quality.
- Support internal audit quality system programs from audit planning, implementation, and feedback Filing for 510k, FDA renewal, CLIA, EPA for clients.
- Develop and deliver training on QA procedures and other critical needs.
- Authorize and coordinate quality assurance compliance ac vi es, including tracking of deviation, OOS investigations and CAPAs to completion .
- Monitor daily operations to ensure the compliance with Standard Operation Practices, SOP's and Current Good Manufacturing Practices, cGMP.
- Conducts Internal Audits to ensure conformance to established SOPs, documents, corrective actions.
- Lead cross-func onal teams for process improvement and document review.
- Established systems for continuous improvement based on feedback from clients and department.

Quality Engineer, Piramal Pharma Solutions – Sellersville, PA

Nov 2023 to May 2024

- Sample pharmaceutical raw materials. Sample and inspect packaging components and printed literature.

□

- Work efficiently in the various computer-based systems (ERP, LIMS, Document Management System, Learning Management System, Quality Management System)
- Led cross-functional teams in meeting project deliverables for CAPA, FDA, ISO, SOP, TPs & TR' Req. timeline and audits.
- Calibrations and verifications of balances, calipers, etc. Direct cross-training within department. Write, manage, and maintain SOPs, testing specifications, and methods. Maintain raw material reserve samples.
- Assure that all departmental work is performed in compliance with GMP and FDA/EMA requirements. Maintain strong attention to detail while reviewing numerous documents daily, ensuring consistent quality and accuracy. Review lab data on paper (Chrom review)/electronically (LIMS) for inclusion on C of A.
- Responsible for certificate of acceptance (C of A) generation for Bulk and Finished drug product, coordination of finished batch status tracking.
- Introduced Biweekly audit schedule walks with area managers/supervisor with quality technician to encourage audit readiness. □ Maintain strict confidentiality with sensitive client information, adhering to industry standards and company policies. □ Conduct in-depth research to strengthen the overall quality and credibility of each review.
- Ensured consistency across multiple review projects by maintaining strict adherence to established protocols and procedures. Releases product within SAP and generates reports as needed.
- Contribute to the development of a knowledge base for common issues encountered during reviews, streamlining future problem-solving efforts. Stay up to date on industry trends and best process, incorporating relevant information into reviews as needed.

**Quality Engineer,
Amgen – Thousand Oaks, CA**

May 2023 to Oct 2023

- Responsible to improve processes and product quality supporting process quality improvement activities Performing in-process and final inspections of parts, ensuring optimization of complaint investigation, monitoring effectiveness of the CAPA systems and reducing non-conformances.
- Responsible for working on Material Review Board activities ensuring trending and closure of issues and dispositions are appropriately addressed and drove continuous improvement initiatives based on MRB data
- Executed Test Method Validation and Process Validation and Provided support during FDA and Notified Body audits
- Performed first piece, in process and final inspections and tests and documented results
- Supported the dispositions of non-conforming product within the material review board (MRB), issuing NC's
- Worked on remediation of CAPA and NC deficiencies noted in audits and inspections and ensuring complaint investigations are completed in a timely fashion,
- Evaluated and implemented updates to the CAPA processes and system for continuous improvement Conducted Quality reviews of production documentation, production batch records, and analytical records Updated and maintained internal Quality Policies and FDA, GMP guidelines.
- Worked on quality improvement initiatives for risk management and conducting root cause investigations
- Worked on identifying and Implementing system of effective process control to support the development, qualifications, and on-going manufacturing of products to meet and exceed internal as well as external requirements
- Assisted the Manager in safeguarding adherence to quality discipline, decision-making and practices in manufacturing
Troubleshoot manufacturing process and worked on production on the manufacturing floor, ensuring adherence to Standard Operation Procedures (SOP) and maintaining Device History Record (DHR) documentations
- Facilitated with writing and revising GMP documents including batch records, deviation reports, and SOPs

□

- Continuously enhancing the Change Control Process by reviewing proposed changes, and communicating the proposed changes to both the Engineering and Production team
- Participated in inspection readiness by identifying and correcting violations
- Ensured implementation of Quality Management System (QMS) on manufacturing floor in accordance with the standards of ISO, FDA regulatory agencies

**Quality Engineer,
Pharmaceuticals – Hauppauge, NY**

Apr 2022 to Apr 2023 ScieGen

- Responsible to operate within quality management system (QMS) to produce and review documentation such as, inspection guide sheets, product drawings, and standard operating procedures (SOPs)
- Responsible for generating and modifying manufacturing process documentation and assuring that manufacturing processes and related documentation follow established policies and procedures
Worked on identifying opportunities for process improvement, led continuous improvement initiatives, support problem solving production issues, and report on quality trends
- Written and reviewed GMP documentation, Work instructions, IQ, OQ, PQ, SOP and control documents □ Worked on SOPs in accordance with validation and maintenance and filling process, gap assessment.
- Investigated failures through established root cause analysis techniques and methods, such as data analysis and physical inspection
- Reviewed test procedures and plans prior to implementation, conducted failure analysis and inspection on products, processes and materials
- Performed root cause investigation and corrective action of product, equipment, material, and processed nonconformances (NC), anomalies, observations
- Executed Gap Analysis, CAPA and Remediation Activities for medical device documents
- Performed Risk Assessments and gap assessments for equipment, process, method, facility tech transfers
- Worked on monitoring performance of equipment, machines, and tools and equipment problems and process parameters which produce non-conforming products, low yields, and product quality issues
- Created Control Plans, PFMEA, and conducted Capability Studies for existing & launch products based on industry standards, customer specifications, FDA, ISO compliance
- Performed investigation corrective action (NCR & CAPA), design of experiments (DOE), creating SOP's, documentation as per GDP requirements
- Reviewed Device History Records (DHRs) to verify calculations, product accountability, accuracy and proper GMP documentation

**Quality Engineer,
Eurythmia Medical Network – Boston, MA**

Jan 2021 to Apr 2022

- Responsible for ensuring all internal change control procedures, risk assessment, FMEA were followed strictly □ Responsible to adhere to quality requirements, Quality Management Systems (QMS), Food and Drug Administration (FDA) regulations, policies and operating procedures, and regulatory requirements.
- Provided support for continuous improvement efforts conducting root cause analysis then formulating and implementing corrective action proposals

□

- Assisted in reviewing batch records for cGMP documentation practices at completion of each batch run □ Generated SOPs compliance documents, batch records and BOM, standard costs, and Manufacturing Plans for new products
- Involved in Implementing, characterizing, and optimizing processes, and tests, and fixtures, jigs for assembly, inspection, and test through implementation of measurement systems, part inspections, and process capability analysis
- Participated in implementing corrective actions and performing root cause investigation as a part of non-conformance (NC) report
- Involved in reviewing Corrective Action and Preventive Action (CAPA) and drafting Remediation plans for the project □ management approval after GAP assessment
- Supported gap analysis, FMEA, risk assessment, root cause analysis, tracking and trending, statistical modelling
- Assisted in ensuring all documentation, specifications were generated in compliance with standard procedures, FDA and ISO statutory requirements
- Maintained lab and other records in accordance with GDP, GMP, Supported development and execution of process and equipment validations
- Managed GMP documentation by supporting cGMP programs, Risk Analysis, Change Control, and Standard Operating Procedure (SOP) and Corrective Action and Preventative Action (CAPA)

**Quality Control Specialist,
Laboratories Limited**

Jun 2019 to Nov 2020 IPCA

- Created Design transfer checklists, production readiness checklist, reviewed, and approved validations plans, protocols and Test method validations for products, equipment, and packaging validations.
- Conducted gap assessments on risk management files (DFMEA, RMR, DTM) and revised documents to reflect design changes and ensure updated mitigations for potential hazards.
- Managed validation projects, including equipment, process, and packaging validations, while creating readiness checklists for production activities.
- Performed CAPA investigations for non-conformances, conducted root cause analysis, and implemented corrective actions to address deviations.
- Reviewed and approved drawings, IFU's, Process validation protocols (IQ, PQ, OQ and TMV's) and reports, standard operating procedures (SOP's), control plans.
- Process control and monitoring of Critical to Quality (CTQ) parameters and specifications. Implemented various product and process improvement methodologies, such as Six Sigma and Lean Manufacturing.
- Supported validation projects from design quality for Existing products, new processes, and new equipment, ensuring compliance with FDA, GMP, ISO 13485, and ISO 14971 standards

Education

- Northeastern University - Boston, MA, Master of Science: Regulatory Affairs of Drugs, Biologics & MD, 12/2022
- Mumbai University - Mumbai, IN, Bachelor of Pharmacy: Pharmacy, 06/2019
