

Anthony Favoroso

+1 (631) 619 2353 · Ronkonkoma, NY · anthonyfavoroso00004@gmail.com

Senior Software Engineer

SaaS | Event-driven Architecture | Microservices | Cloud Computing | Startup & Agile

Senior Software Engineer with 14+ years of experience designing and building scalable, cloud-native web and mobile applications. Expertise in full-stack development, API design, cloud infrastructure, and DevOps. Proven track record of enhancing performance, security, and system reliability in high-growth, agile environments. Adept at building cross-functional solutions that improve user experience and drive business impact.

EDUCATION

Bachelor of Computer Science, September 2011

Stony Brook University – *Stony Brook, NY*

WORK EXPERIENCE

Notion – *San Francisco, CA*

Senior Software Engineer - Remote | *Feb 2020 - Jul 2025*

Led full-stack architecture and development of core features of Notion Projects and Notion Calendar, delivering scalable, real-time collaboration tools with secure data models and intuitive user experiences.

- Integrated a shared **RBAC SDK** and **centralized authentication** via **OAuth2, JWT, and AWS IAM**, enabling consistent, secure access control across all microservices.
- Engineered **real-time synchronization systems** using **WebSockets, gRPC, and Redis Pub/Sub with Java** to maintain consistent shared state and low-latency access across globally distributed clients.
- Applied **OT** and **CRDTs** using **Event Sourcing** and the **CQRS** pattern via **Apache Kafka**, enabling seamless offline editing and automatic conflict resolution across devices.
- Designed scalable **PostgreSQL-based systems** using **partitioning, sharding, and PgBouncer** connection pooling to support high-concurrency workloads and efficient query performance.
- Built a reliable browser-based caching and persistence layer with **WebAssembly-powered SQLite**, ensuring safe offline access, data integrity, and fast page loads with safe transactional guarantees.
- Developed intuitive **React + TypeScript** components with advanced **JavaScript** features (hooks, async data fetching, state management) for Kanban boards, timelines, and calendar views.
- Migrated legacy systems to a **Kubernetes-based cloud-native architecture**, using **Terraform** for infrastructure automation and **GitHub Actions** for **CI/CD**, reducing deployment times by 40%.
- Collaborated cross-functionally with product, design, and infrastructure teams to iterate on **API contracts, data models, and UI behaviors**, ensuring technical rigor and a seamless user experience.
- Implemented comprehensive **monitoring and alerting pipelines** using **Prometheus, Grafana, and AWS CloudWatch**, enabling real-time observability, anomaly detection, and SLA enforcement.
- Established **automated testing pipelines** across frontend and backend (unit, integration, and E2E tests), improving reliability and reducing regressions across complex real-time collaboration flows.
- Mentored **junior and mid-level engineers** in system design, secure development, testing strategies, performance debugging, and fostering a culture of learning and engineering excellence.

Iterable – New York, NY

Senior Software Engineer - Hybrid | Aug 2014 - Jan 2020

Optimized **system performance** and **data processing** while developing **scalable features** to enhance the **reliability** and **user experience** of the **marketing platform** for personalized campaigns.

- Architected a distributed, event-driven messaging platform using **Apache Kafka**, enabling real-time marketing campaign execution and high-volume event processing.
- Built full-stack microservices and dashboards for multi-channel orchestration, A/B testing, and personalization using **REST** and **GraphQL APIs**.
- Integrated with **Salesforce** and **HubSpot** via **OAuth2-secured APIs** with **Java**, building backend data sync services and frontend status dashboards with error handling and real-time feedback.
- Developed **React.js** dashboards and real-time reporting views using **D3.js**, **Chart.js**, and custom visualization components, enabling users to monitor campaign performance and user engagement.
- Collaborated with designers and PMs to deliver features, mentored engineers on system design and development practices, and improved observability through metrics, structured logging, and **Sentry**.

HCA Healthcare – Nashville, Tennessee

Full-Stack Developer - Remote | Oct 2011 - Jul 2014

Enhanced the **PatientKeeper platform**, optimizing clinical workflows for healthcare professionals and ensuring **secure**, efficient **patient data management**.

- Designed and implemented user-friendly interfaces using **JavaScript**, **HTML**, **CSS**, and **jQuery**, simplifying navigation for clinicians and enhancing overall user experience.
- Developed secure, efficient server-side applications with **Java**, focusing on core functionalities such as patient record management, medication tracking, and appointment scheduling.
- Optimized and maintained relational database schemas in **Oracle DB**, ensuring efficient storage and retrieval of high-volume patient information.
- Participated in the full software development lifecycle - from requirements gathering to testing and deployment - while working in a collaborative Agile environment.

PROFESSIONAL SKILLS

- **Programming languages:** JavaScript, Java, Python, Golang, C#, PHP, SQL, C/C++
- **Back-end development:** Java (Spring Boot), Node.js (Express/Nest.js), Python (Django/FastAPI/Flask), Golang (Gin), C# (.NET core/ASP.NET), C/C++, Hibernate, SQL, NoSQL, Redis, RESTful APIs, GraphQL, gRPC, OAuth, JWT, Kafka, RabbitMQ, Prisma
- **Front-end web development:** HTML, CSS, JavaScript, TypeScript, React, Angular, Vue, React Query, Next.js, Redux, Context API, Material UI, Tailwind CSS, D3.js, Chart.js, ApexCharts.js
- **Front-end mobile development:** Swift, Kotlin, React Native
- **Database:** MySQL, PostgreSQL, MongoDB, DynamoDB, SQL Server, Oracle, Aurora
- **Cloud/DevOps:** AWS, GCP, Azure, Terraform, Jenkins, Github Actions, Docker, Kubernetes
- **Testing Frameworks:** Jest, Junit, Mockito, React Testing Library, Selenium, Cypress, Playwright
- **Architecture:** Microservices, Microfrontends, Monorepo,DDD, Event-driven, SOA, Serverless, TDD
- **Other:** Mapbox GL, Google Maps API, Keycloak, WebRTC, Swagger, Formik, Webpack, Agile, Restful API, SEO, Figma, Sketch, Adobe, A/B testing, Stripe, React Query, Apollo, DataDog, Amplitude, PagerDuty, Webpack, Google Analytics, Google Tag Manager, Git (Github/Gitlab/Bitbucket), Jira
