

Anurag Reddy Ryava

Software Developer

He/Him | anuragreddy1970@gmail.com | [LinkedIn](#) | +1 (816)-933-0212

SUMMARY

Results-driven Software Developer over 5 years of experience in full-stack development, cloud computing, and enterprise software solutions. Skilled in C#, .NET, ASP.NET MVC, Razor, Angular, and Microsoft SQL server, with expertise in RESTful API development, microservices architecture, and database optimization. Adept at integrating third-party APIs, deploying scalable cloud solutions in GCP/AWS/Azure, and optimizing system performance through caching and asynchronous processing. Passionate about building efficient, scalable software solutions while collaborating with cross-functional teams to drive innovation and business success.

TECHNICAL SKILLS

- **Programming Languages:** C#, C++, Java, JavaScript, TypeScript
- **Scripting and Markup:** JavaScript, HTML5, CSS3, SCSS, Type script, XML, SSIS
- **Front End Technologies:** Angular (16, 18), HTML, CSS, Blazor, Telerik UI, Kendo UI, jQuery, AJAX
- **Back End Technologies:** .NET Core (3.1, 6.0, 8.0), ASP.NET, Web API, RESTful Services, SOAP, WCF
- **Databases:** MSSQL Server, PostgreSQL, MySQL, Oracle, MongoDB, Cassandra, DynamoDB
- **Cloud and DevOps:** GCP, Azure, AWS, Terraform, Azure DevOps, Docker, Kubernetes
- **CI/CD:** Jenkins, Octopus Deploy, TeamCity, Azure DevOps, SonarQube
- **ORM & Data Access:** LLBLGen Pro, Entity Framework, LINQ, Dapper, ADO.NET
- **Messaging & Integration:** RabbitMQ, OAuth, Swagger, GPS Sync, Verizon Connect API, ServiceNow API
- **Testing and Debugging:** XUnit, NUnit, Moq, Postman, Swagger
- **Monitoring & Logging:** Datadog, Redgate, NLog, Serilog, Seq
- **Version Control:** Git, GitLab, Azure DevOps, TFS
- **Software Development Methodologies:** Agile, Scrum, Test-Driven Development (TDD), Microservices
- **Operating Systems:** Windows, Linux, MacOS

PROFESSIONAL EXPERIENCE

Wachter, Inc – Lowell, AR
Software Developer II

Feb 2024 – Present

- Effectively involved in various stages in development, from the project planning until production and maintenance using agile.
- Collaborated with cross-functional teams to gather and translate business requirements into functional and technical specifications for application development.
- Worked with ASP.NET Web Forms and caching mechanisms, optimizing application performance and reducing load times by 35%.
- Designed and implemented seamless Verizon Connect API integrations, replacing legacy WCF services to enhance GPS synchronization and improve system scalability by 40%.
- Developed real-time integrations between ServiceNow, AX, and the Trust web app using RabbitMQ, optimizing data synchronization, reducing latency by 30%, and improving interoperability.
- Managed middleware component with RabbitMQ, ensuring reliable message queuing and communication between distributed systems.
- Implemented efficient server-side and client-side validations using ASP.NET validation controls and jQuery, reducing validation failures by 25%.
- Developed dynamic front-end interfaces with Angular and implemented robust backend APIs using C# and .NET for seamless integration.
- Utilized design patterns such as singleton, repository, factory and MVVM to enhance code abstraction reusability, abstraction and testability, leading to 30% reduction in development and significantly improved maintainability.
- Applied MVC architecture and adhered to solid principles to maintain scalable and maintainable code structure across the application, resulting in 25% increase in overall code quality and team development efficiency.
- Ensured unit test coverage for all critical backend components and APIs, enforcing test – driven development practices to maintain reliability and support continuous integration.
- Efficiently manipulated DOM nodes using Angular, ensuring faster UI updates and reducing render times.
- Managed backend systems using SQL Server, optimizing database queries, indexing, and stored procedures to improve data retrieval speed by 45%.
- Leveraged LLBL Gen for efficient ORM based database mapping, ensuring seamless integration with data layer.
- Utilized Microsoft SQL Server for database management, designing and implementing database schemas, stored procedures, and triggers for efficient data manipulation and retrieval, essential for data management.

- Created and utilized Swagger for efficient API debugging, reducing API response errors by 20%.
- Resolved critical production issues promptly, ensuring 99.9% uptime and rapid deployment of high-priority fixes.
- Consistently delivered high-performance applications, demonstrating strong analytical and debugging skills, reducing mean time to resolution (MTTR) by 40%.
- Demonstrated strong verbal and written communication skills while collaborating with business analysts, QA teams and stakeholders to ensure clear requirements and timely delivery.
- Proactively engaged in troubleshooting and root cause analysis during the production support, minimizing system downtime and ensuring seamless issue resolution.

Environment: .Net 3.1, 4.8, 6.0, 8.0, C#, Asp .Net, IIS, Webforms, Restful APIs, SOAP, OAuth, LLBLGenPro 5, LINQ, MS SQL server, AX Microsoft dynamics, Terraform, RabbitMQ, AzureDevOps, Datadog, Redgate, Entity Framework, Telerik UI, Kendo UI, jQuery, JavaScript, typescript, Angular 16, 18, Node.js, TFS, Git, postman, swagger

Storewise, Inc – Overland Park, KS
Software Engineer II

June 2023 – Jan 2024

- Actively participated in Agile scrum development environment, attending daily scrum meetings and sprint reviews to achieve project milestones and deliverables collaboratively with the team.
- Leveraging a strong tech stack, including .NET 8.0, Blazor UI, Telerik UI for .NET MAUI 6.6.0, Dapper, and PostgreSQL to build a web-based operating system (Blazor OS) with a seamless, interactive, and multi-tasking user experience.
- Enhanced a self-hosted search, analysis, and alerting server using Seq, tailored for structured log data management.
- Implemented Entity Framework, improving data retrieval efficiency by 45% and data manipulation speed by 50%.
- Utilized company standards of AWS services like EC2, S3 buckets, Octopus, Team city, .Net Core 3.1, PostgreSQL, and BlazorUI, Telerik UI to create the administration portal used to manage clients.
- Engineered a sophisticated service monitoring solution by creating an email reporting application with .Net Framework 4.8, PostgreSQL, and SendGrid integration.
- Integrated Dapper ORM for efficient database management and data retrieval, resulting in a 20% improvement in data access speeds and streamlined data operations.
- Implemented continuous integration and continuous deployment (CI/CD) pipelines using Octopus Deploy and TeamCity.
- Proficient in utilizing version control systems such as Git/GitLab for managing the code base changes, tracking feature branches and facilitating collaboration among team members.
- Integrated OAuth2 authentication across .Net applications, allowing for secure, token-based access while enhancing user data protection and access management.
- Configured and managed API gateways to streamline communications between microservices, enhancing security, load balancing and request handling for improved user experience.
- Created complex queries for client databases, improving integration with RSSG database schema by 50%.
- Participated in cool-down shift rotations (on-call support), proactively resolving production issues, minimizing downtime, and ensuring 24/7 system reliability.

Environment: .Net 8.0 6.0, 4.8, 3.1, ASP.NET, Web API, C#, Blazor, Telerik UI, Kendo UI, .Net MAUI, Dapper, PostgreSQL, Entity framework, MS Azure, JavaScript, jQuery, HTML5, CSS, Git, GitLab Octopus Deploy, TeamCity, Agile, Postman, swagger, AWS, Azure, Tuning SQL, Data grip, visual studio 2022, VS code.

University of Missouri - Kansas City
Software Engineer I

March 2022 – May 2023

- Worked in a collaborative project environment, focused on developing and deploying high quality web applications using the latest technologies.
- Built responsive and interactive user interfaces using React, JavaScript, HTML5 and CSS, enhancing user experience and engagement.
- Created reusable components, custom models, custom directives, pipes and services in React, ensuring code reusability and maintainability.
- Implemented React to develop and implement a user-friendly UI design for presentation layer, utilizing React HTTP Request to fetch data from web servers and process JSON data for rendering the UI.
- Integrated third party components like React Strap for enhanced functionality and mobile user experience.
- Applied advanced React concepts such as hooks, context API and state management with redux for efficient UI development.
- Worked with OAuth2 to enable secure access to third-party API's, improving application interoperability without compromising user credentials.
- Built RESTful APIs for seamless payment gateway integration, improving transaction processing speed by 50%.
- Wrote unit and integration tests with JUnit 5 and Moq, achieving 85% test coverage and reducing defects by 30%.
- Integrated Web Sockets for real-time booking updates, reducing scheduling conflicts by 50%.

- Deployed the application on AWS EC2 with Docker and Nginx, improving scalability and deployment efficiency.
- Collaborated with faculty and IT teams, ensuring smooth adoption of new features and improving administrative workflows by 25%.

Environment: C#.NET, React, ReactStrap, .Net Core 6.0, SQL Server 2019, DB2, Micro Services/Rest Api's, Microsoft Azure, Entity Framework Core, ETL, SignalR, HTML 5, CSS3, Sass, Bootstrap, xUnit, Jest Framework, ASP.NET MVC core Packages, Swagger, JSON, Confluence, JIRA, Jenkins, Visual Studio IDE 2022, Visual Studio Code IDE, Git Bash, Bitbucket.

Asian Technology Solutions, India
Junior software Developer

October 2020 – December 2021

- Worked in a collaborative Agile environment, developing and deploying high-quality web applications using modern technologies.
- Engaged with product owners, designers and cross functional teams to ensure successful project delivery and to align with project.
- Utilized JIRA to create and manage user stories, epics, sprints and backlogs, ensuring the smooth workflow and timely resolution of issues.
- Orchestrated the integration of .NET, JavaScript, Angular, and React to enhance client application development, resulting in a 20% improvement in overall performance.
- Extensively utilized core Angular features such as HTTP, data binding, forms, services, resolvers, guards, and dependency injection.
- Extensive experience in writing unit tests for Angular applications using Jasmine, using its Test-driven development (TDD) syntax and assertion capabilities to ensure code quality and reliability.
- Consumed RESTful web service APIs using POST, PUT, DELETE, and GET methods to interact with backend services.
- Utilized C# for backend development, applying Object-Oriented Programming (OOP) principles for scalable and maintainable code.
- Integrated Single Sign-On (SSO) using OAuth2, simplifying the login process across multiple applications and improving the overall user experience
- Integrated a new automation system for a manufacturing plant using Java and C#, leading to a 30% reduction in manual labor.
- Streamlined deployments with Docker, cutting setup times by 70% and halving deployment issues.
- Administered DB2 and MongoDB databases, enhancing data retrieval efficiency by 40% and improving storage processes by 25%.

Environment: C#, Visual Studio, ASP.NET MVC 5, Entity Framework 6, MS SQL Server, Angular 4, JavaScript, jQuery, HTML5, CSS3, Microsoft Azure, Karma, Jasmine, Nunit, Jira, and Git.

Lasya InfoTech, India
Software Engineer Intern

August 2019 – September 2020

- Executed database optimizations using SQL Server Management Studio, leading to a 20% enhancement in data retrieval speeds.
- Deployed applications with Docker, reducing deployment cycle time by 30% and decreasing deployment failures by 50%.
- Implemented rate-limiting and caching strategies in the email notification API, improving its response time and reducing server load by 15%.
- Developed multi-threaded algorithms for real-time data processing within the application, improving overall system performance and reducing latency by 20%.
- Refined the search functionality by implementing fuzzy matching and auto-suggest features, enhancing the user experience by increasing search accuracy and speed.
- Set up centralized logging and real-time monitoring for Dockerized applications, reducing the time to identify and resolve deployment issues by 50%.
- Built the search with automated word generation algorithm from the database. Also built an API to send the email notification from the website to the respected recipient regarding the reservation details, expiration dates, amount for the reservation.

Environment: SQL Server, MySQL, Docker, Kubernetes, REST API, Git, Jenkins, Windows, Linux

EDUCATION

Master of Science in Computer Science
University of Missouri Kansas City, USA

Jan 2022 – May 2023
