(817) 864-1182

Professional Summary

- Full Stack Java Developer with 6+ years of progressive experience in enterprise application development, cloud-native systems, and full-stack delivery.
- Skilled in architecture discussions and aligning engineering solutions with product vision and business goals.
- Proficient in bridging backend and frontend using REST APIs and modern JavaScript frameworks.
- Knowledge of healthcare and logistics, including HIPAA compliance, HL7/FHIR protocols, and EDI transactions.
- Skilled in building distributed systems using asynchronous messaging, retries, circuit breakers, and idempotent design.
- Implemented Infrastructure as Code (IaC) using Terraform to manage resources across multi-account AWS environments.
- Familiar with AI/ML model deployment, MLOps pipelines, version control, drift detection, and feature engineering.
- Strong understanding of CI/CD automating testing, security scans, and environment provisioning.
- Expertise in container orchestration, resource tuning, and autoscaling strategies within Kubernetes and Docker Swarm.
- Built internal libraries and SDKs to standardize logging, tracing, and metrics collection across microservices.
- Adept at agile software development, including sprint planning, estimation, retrospectives, and continuous delivery practices.
- Experienced with polyglot persistence strategies, choosing between relational and NoSQL databases based on use case fit.
- Experience with A/B testing frameworks, feature toggles, and phased rollouts for risk-mitigated production deployments.
- Passionate mentor fostering growth in junior engineers, with a focus on clean architecture and SOLID principles.
- Track record of collaborating across DevOps, data science, and product teams to deliver unified, customer-centric platforms.

Technical Skills

- Programming Languages: Java, Python, JavaScript, TypeScript, C#, SQL, Node.js
- Frameworks & Libraries: Spring Boot, Hibernate, JPA, Angular (6 to 14+), React, Express.js, RxJS, D3.js
- Cloud Platforms & DevOps: AWS (Lambda, EC2, S3, RDS, Fargate, Glue, DynamoDB, API Gateway, CloudFormation, CloudWatch, SageMaker), Terraform, Docker, Kubernetes, Jenkins, GitHub Actions, Helm, CodePipeline, CodeDeploy
- AI/ML Tools & Concepts: AWS SageMaker, Scikit-learn, Pandas, NumPy, MLOps (Model versioning, Feature engineering, Drift detection)
- Databases: Oracle, PostgreSQL, MySQL, MongoDB, DynamoDB
- Testing & Quality Assurance: JUnit, Mockito, Postman, Selenium, TestNG, REST Assured
- Authentication & Security: OAuth 2.0, JWT, Okta, Spring Security, RBAC, HIPAA, SOC2
- Monitoring & Logging: Prometheus, Grafana, AWS X-Ray, ELK Stack (Elasticsearch, Logstash, Kibana), CloudWatch
- Protocols & Standards: REST, WebSockets, HL7, FHIR, EDI, JSON, YAML

Tools & IDEs: Git, Maven, IntelliJ IDEA, Visual Studio Code, Docker CLI, Jenkins Dashboard, GitHub

Professional Experience

Valley Bank, Morristown, NJ

April 2023 – Present

Full Stack Software Engineer

- Designed data pipelines and predictive alerting systems using Python, Kafka, and AWS Glue, improving real-time analytics for chronic condition monitoring.
- Built AI/ML-powered recommendation engines using Python and SageMaker to suggest personalized wellness programs and improve member retention.
- Led cross-functional teams in implementing responsive healthcare portals using Angular 14+ and React, ensuring ADA accessibility compliance.
- Directed the migration of critical workloads from on-premises to AWS, reducing operational costs and improving availability.
- Oversaw secure integration with external partners via FHIR-compliant Java APIs, streamlining claims and preauthorization workflows.
- Spearheaded development of patient-facing applications using Java, Spring Boot, and microservices, enhancing user engagement.
- Designed end-to-end cloud-native solutions leveraging AWS Lambda, Fargate, and API Gateway, enabling faster release cycles and reduced infrastructure complexity.

- Developed internal tools using Node.js to automate policy validations and compliance audits across 100+ microservices.
- Modernized legacy C# Windows services into scalable Java/Kubernetes workloads, improving scalability and maintainability.
- Orchestrated Kubernetes-based deployments using Helm, integrating health checks, secret management, and autoscaling.
- Championed DevOps initiatives using Terraform, GitHub Actions, and Docker, achieving full CI/CD automation for 15+ services.
- Facilitated architectural design sessions, technical roadmap planning, and system health reviews for enterprise-level systems.
- Enhanced end-user performance by implementing server-side rendering (SSR) for React-based components in member portals.
- Mentored 6+ developers across backend and frontend teams in Java, Angular, AI/ML, and clean code practices.
- Defined and enforced architectural standards, design patterns, and coding best practices across distributed development teams.
- Built secure authentication flows integrating Okta, OAuth 2.0, and JWT, supporting multi-tenant access controls.
- Implemented observability tooling using Prometheus, Grafana, and AWS X-Ray, enabling proactive issue resolution and root cause analysis.
- Conducted high-stakes code and security reviews to ensure HIPAA, SOC2, and internal compliance standards.

Technologies Used: Java, Spring Boot, AWS (Fargate, Lambda, Glue, API Gateway, SageMaker), Angular 14+, React, Python (AI/ML), Node.js, C#, Docker, Kubernetes, Kafka, Terraform, GitHub Actions, Prometheus, Grafana, Okta, OAuth2.0, Helm

Synovus, Columbus, GA **Software Engineer**

February 2022 – March 2023

- Architected and developed logistics microservices in Java using Spring Boot, facilitating carrier onboarding and freight matching processes.
- Leveraged AWS API Gateway, Lambda, and DynamoDB building serverless event-driven services, reducing cost.
- Built routing and pricing recommendation engines using Python-based ML models, optimizing supply chain operations.
- Developed complex front-end workflows with Angular 9 and RxJS, enabling filtering and map-based freight tracking.
- Rewrote legacy shipment scheduling modules from C# to Java with Spring Cloud, improving system stability and performance.
- Integrated React into existing Angular apps for reusable components, such as dashboards and real-time notification panels.
- Enhanced data visualization for logistics KPIs using Java, Angular, and D3.js, improving performance for stakeholders.
- Built internal CLI tools in Node.js for developer automation and service monitoring, reducing manual overhead.
- Deployed containerized Java apps to AWS ECS, configured blue/green deployments using Code Pipeline and Code Deploy.
- Ensured secure B2B communication by implementing OAuth2.0 and JWT authentication across logistics APIs.
- Led Agile ceremonies, collaborated with Product Owners and QA teams, and maintained detailed technical documentation.
- Reduced shipment ETA inaccuracies by 25% by integrating third-party APIs and machine learning models into Java services.
- Managed CI/CD automation using Jenkins, GitHub Actions, and Docker, enabling zero-downtime deployments.
- Designed and implemented database schemas and triggers in PostgreSQL to support real-time transactional operations.
- Created reusable design patterns across multiple services to enforce consistency and reduce duplicated code in Java codebase.
- Collaborated on cross-functional squads with data scientists, engineers, and DevOps teams across multiple time zones.
- Integrated cloud-native monitoring using AWS CloudWatch, X-Ray, and third-party APMs, ensuring application health and uptime.
- Conducted performance tuning and thread optimization in high-load Java services supporting 100K+ concurrent requests.

Technologies Used: Java, Spring Boot, AWS (Lambda, ECS, API Gateway, DynamoDB, CodePipeline), Angular 9+, React, Python (ML), Node.js, C#, PostgreSQL, Jenkins, GitHub Actions, Docker, OAuth2.0, D3.js, RxJS

Moda Health, Portland, OR **Full Stack Java Developer**

April 2020 - January 2022

- Designed and developed scalable Java-based microservices supporting laboratory information systems (LIS), ensuring seamless healthcare data exchange.
- Migrated monolithic applications to Spring Boot-based microservices, improving system scalability and modularity.
- Implemented data ingestion and processing pipelines using Java, Python, and AWS Lambda, optimizing ETL workflows for pathology reports.
- Integrated AI/ML models (Python's Scikit-learn) for predictive analytics on lab trends, enabling early anomaly detection.
- Developed real-time dashboards using Angular 6+ and React, enhancing clinical decision support visibility for lab technicians and physicians.

- Used AWS S3, RDS, and EC2 to host and scale microservices and data-driven applications; managed resources using CloudFormation.
- Refactored legacy code from C# and Java EE to modern Spring Boot and Node.js services to reduce technical debt and improve maintainability.
- Collaborated with cross-functional teams to design RESTful APIs that enabled secure data exchange between LIS and EHR systems using Java and C#.
- Created automated test suites using JUnit, Mockito, and Postman to ensure high code quality and reduce manual testing.
- Built role-based access control (RBAC) and secure user authentication workflows with Spring Security and OAuth 2.0.
- Optimized SQL and NoSQL queries in Oracle and MongoDB, improving the performance of data-intensive lab reporting modules.
- Conducted regular peer code reviews and mentored junior developers in Java, Angular, and AWS best practices.
- Implemented integration and deployment (CI/CD) pipelines using Jenkins, Git, and Docker, reducing deployment times.
- Built custom Angular components to enable real-time form validations and UI responsiveness in data entry interfaces.
- Integrated HL7/FHIR healthcare data standards with backend Java APIs to ensure interoperability across diagnostic systems.
- Deployed containerized services using Docker and orchestrated them with Kubernetes for scalability and fault tolerance.
- Developed event-driven components using Node.js and AWS SNS/SQS, improving system decoupling and real-time processing.
- Proactively identified production issues using AWS CloudWatch and performed root cause analysis to prevent recurrence.

Technologies Used: Java, Spring Boot, AWS (EC2, S3, RDS, Lambda, CloudFormation), Angular 6+, React, Python (ML), Node.js, C#, Oracle, MongoDB, Jenkins, Docker, Kubernetes, HL7/FHIR, Git

Citizens Insurance, Jacksonville, FL

January 2019 – March 2020

Java Developer

- Developed and maintained Java-based enterprise applications for insurance claims processing, leveraging Java 8/11 for optimal performance and efficient multi-threading.
- Collaborated with cross-functional teams (business analysts, QA, and product managers) to design and implement software solutions for new features and enhancements in the insurance platform.
- Utilized Spring Framework (Spring Boot, Spring MVC, Spring Security) to build RESTful web services, enabling smooth integration between front-end applications and backend systems.
- Implemented microservices architecture using Spring Cloud and Docker, ensuring scalability and fault tolerance in a cloud-native environment.
- Developed and optimized SQL queries and stored procedures using Oracle Database and MySQL, ensuring data integrity and high performance in large-scale insurance applications.
- Applied Agile methodologies (Scrum, Kanban) in daily standups, sprint planning, and retrospectives, improving collaboration and ensuring timely delivery of features.
- Integrated third-party APIs for policy management and claims services, using REST and SOAP web services, enhancing the system's functionality.
- Performed unit testing and integration testing with JUnit and Mockito, ensuring high-quality code with a 95%+ code coverage in critical modules.
- Participated in code reviews to ensure adherence to best practices and code quality standards, resulting in a decrease in post-deployment defects.
- Developed batch processing systems using Spring Batch to efficiently handle large volumes of data and generate end-of-day reports for claims processing.
- Utilized version control systems like Git and Bitbucket for source code management, ensuring seamless collaboration across distributed development teams.
- Optimized application performance by refactoring legacy code, reducing the average response time of the insurance claims system through code enhancements and database indexing.

Environment: Java 8/11, Spring Boot, Spring MVC, Spring Security, Spring Cloud, Docker, RESTful APIs, SOAP, JUnit, Mockito, Agile (Scrum, Kanban), Oracle, MySQL, SQL, PL/SQL, Git, Bitbucket, Jenkins, Apache Kafka, Apache Camel.

Education: Bachelor's in Computer Information Systems, University of North Texas, Denton, TX
