

Audrey Jiofack

Senior DevOps Engineer

audreybjiofack@gmail.com | Cell: 908-525-8861 | Houston, Texas

SUMMARY:

Results-driven DevOps Engineer with experience designing, automating, and optimizing mission-critical deployments in cloud and on-premises environments. Expertise in CI/CD, cloud infrastructure, security, and container orchestration, with a strong background in AWS, Azure, and GCP. Adept at implementing Infrastructure as Code (IaC) solutions using Terraform, CloudFormation, and Ansible, ensuring scalable, secure, and high-performing systems.

Proficient in Kubernetes, Docker, Helm, and ArgoCD, driving seamless microservices deployment with GitOps workflows. Skilled in monitoring and observability tools like Prometheus, Grafana, ELK Stack, and Datadog to enhance system reliability and performance. Strong advocate for DevSecOps, integrating security best practices such as IAM, Vault, and compliance automation into the development lifecycle. Proven ability to streamline CI/CD pipelines using Jenkins, GitHub Actions, and GitLab CI, significantly reducing deployment times and increasing software delivery efficiency. Strong background in networking, load balancing, and database management, ensuring optimized application performance and availability. Passionate about automation, problem-solving, and operational excellence, with experience in 24/7 on-call support, incident response, and root cause analysis.

SKILLS:

- **Operating Systems:** Linux (Ubuntu, Debian, CentOS, Red Hat), Windows Server, UNIX
- **Cloud Platforms:** AWS, Azure, GCP
- **Version Control:** Git (GitHub, Forgejo)
- **CI/CD Tools:** Jenkins, GitHub Actions
- **Scripting & Programming:** Bash, PowerShell, Shell Scripting, Python, Go, JavaScript, Ruby
- **Automation & Configuration Management:** Ansible, Terraform, CloudFormation
- **Monitoring & Logging:** Prometheus, Grafana, ELK Stack (Elasticsearch, Logstash, Kibana), Datadog
- **Security & Compliance:** IAM, AWS SSO, Vault, Passbolt, SSL/TLS, Secrets Management, DevSecOps, Compliance Standards (SOC2, PCI-DSS, ITIL)
- **Containerization & Orchestration:** Docker, Kubernetes, Helm, ArgoCD, Forgejo
- **Networking & Load Balancing:** Nginx, Apache Kafka
- **Databases & Storage:** MySQL, PostgreSQL, Redis, Oracle, Snowflake, SQL
- **Development & Lifecycle:** SDLC, SaaS, E-commerce, API, Web Services

- **Project Management & Agile Methodologies:** Agile, Scrum, Kanban
- **Collaboration & Communication:** Slack, Jira, Taiga, Confluence

EXPERIENCE:

Sr. DevOps Engineer

EK-Tech Software Solutions

May 2019 – Present

- Led the architecture, design, and maintenance of a highly scalable, fault-tolerant cloud infrastructure across AWS, Azure, and GCP, implementing advanced networking, security best practices, and disaster recovery strategies.
- Owned and optimized the automation of CI/CD pipelines using Jenkins and GitHub Actions cutting deployment times and significantly increasing release velocity.
- Designed and implemented Forgejo for secure, self-hosted Git management, enhancing repository access control, collaboration, and code governance.
- Strategized and maintained GitHub Actions workflows for automating testing, build, and deployment processes, improving code quality and reducing manual intervention.
- Developed and enforced Infrastructure as Code (IaC) solutions with Terraform, CloudFormation, and Ansible, achieving full-stack automation and eliminating manual provisioning errors.
- Designed and led the implementation of comprehensive monitoring and logging frameworks with Prometheus, Grafana, and ELK Stack, enabling real-time observability, proactive incident response, and performance optimization.
- Championed security-first DevOps practices, integrating automated vulnerability assessments, threat modeling, and secrets management with Vault and Consul.
- Architected and managed Kubernetes clusters using Helm and ArgoCD, enabling GitOps-driven deployments, auto-scaling, and zero-downtime rollouts.
- Optimized networking and load-balancing strategies using Nginx, Apache Kafka, and Kubernetes Ingress controllers, enhancing application availability and efficiency.
- Spearheaded high-performance automation scripting in Bash, PowerShell, Python, and Go, streamlining infrastructure management, deployment workflows, and incident response.
- Automated repository management and CI/CD pipelines in Forgejo, improving code collaboration, access control, and workflow efficiency.
- Led site reliability engineering (SRE) initiatives, ensuring high system availability, reducing mean time to recovery (MTTR), and driving operational excellence.

- Mentored junior DevOps engineers, fostering a culture of automation, best practices, and continuous improvement.
- Provided mission-critical 24/7 on-call support, rapidly troubleshooting production incidents, conducting thorough root cause analysis, and implementing long-term resilience measures.

DevOps Engineer

AfRisk Analytics

Jan 2018 - Apr 2019

- Designed and deployed Infrastructure as Code (IaC) solutions with Terraform and AWS CloudFormation, streamlining cloud resource provisioning and management.
- Built and optimized CI/CD pipelines using Jenkins and GitHub Actions, integrating automated testing, security scanning, and blue-green deployments to minimize downtime and enhance deployment reliability.
- Orchestrated large-scale containerized application deployments with Docker and Kubernetes, implementing microservices architecture for enhanced scalability, resilience, and operational efficiency.
- Implemented robust logging and monitoring solutions with ELK Stack and AWS CloudWatch, ensuring real-time visibility into system performance and rapid anomaly detection.
- Architected serverless computing solutions using AWS Lambda and API Gateway, reducing infrastructure complexity and operational overhead while enabling event-driven workflows.
- Managed hybrid cloud environments, seamlessly integrating AWS and Azure DevOps to create unified, cross-platform deployment workflows.
- Engineered and fine-tuned network architecture with Elastic Load Balancing (ELB) and auto-scaling strategies, optimizing performance and cost efficiency.
- Led cloud security initiatives, conducting thorough security audits, enforcing compliance with SOC2 and PCI-DSS standards, and implementing IAM best practices, SSL/TLS encryption, and threat modeling to safeguard critical workloads.
- Developed and managed GitHub Actions pipelines for build automation, ensuring seamless deployments and reducing manual errors.
- Implemented Forgejo for self-hosted Git repository management, improving security, compliance, and developer collaboration within a controlled environment.

Linux System Administrator

AfRisk Analytics

Jan 2016 - Jan 2018

- Installed, configured, maintained, and managed Linux systems (CentOS, RedHat, Ubuntu, Debian) and Windows servers to ensure smooth operation and performance.
- Managed software installations, updates, and removals using package managers (apt, yum), ensuring system stability and security.
- Set up and maintained Linux servers on KVM, including web servers (Apache, Nginx) and databases (Postgres, MySQL). Created automation scripts using Bash and Python to simplify tasks and schedule system updates.
- Monitored system performance using tools like Datadog, Grafana, and Prometheus. Analyzed logs and fixed issues to reduce downtime.
- Identified and resolved hardware and software problems, then leveraged backup solutions and disaster recovery plans to protect critical data and reduce system downtime.
- Managed user accounts, permissions, and security controls for users using AWS SSO, ensuring data security and compliance.
- Configured network settings, firewalls, and security protocols to protect systems from unauthorized access. Applied security patches and conducted vulnerability assessments to improve system security.
- Leveraged Bookstack to maintain system documentation, including configurations, troubleshooting guides, and disaster recovery plans. Responding quickly to system failures to minimize business impact.
- Provided 24/7 support during on-call shifts, troubleshooting critical issues and working with IT teams to integrate Linux systems into enterprise infrastructure.
- Implemented server security best practices following CIS guidelines and monitored Linux servers in a production environment to ensure zero downtime.
- Used Python and Bash scripting for automation, system management, and process improvement.
- Planned and managed system capacity to ensure a scalable and high-performance IT infrastructure.

EDUCATION:

- Master's Degree - Banking and Finance
University of Douala, Cameroon
Nov 2004 – Sep 2005
