

PROFESSIONAL SUMMARY

- 10+ years of experience in **Senior Full-Stack .NET development**, covering all phases of the **Software Development Life Cycle (SDLC)**.
- Proficient in **software development life cycle (SDLC)** with expertise in **Agile (Scrum) and Waterfall methodologies**.
- Strong Background in **ASP.NET Core Web API, ASP.NET MVC, ASP.NET Core Web App, Microservices** ensuring solutions that are scalable and easy to maintain.
- Proficient in **C# 10.0**, including features like records, global using directives, file-scoped namespaces, and async streams.
- Expertize in **front-end technologies** and **UI Testing** technologies like **Angular, TypeScript, AngularJS, HTML, CSS, JavaScript, Bootstrap, jQuery, AJAX, Karma, Cucumber, Jasmine, Protractor** for dynamic user interfaces.
- Hands-on experience in multiple architectural patterns with **MVC and Microservices Architecture, RESTful APIs**.
- Proficient in designing, implementing, and consuming APIs and Extensive experience with **Entity Framework Core**.
- Proficiency in handling **JSON** data formats
- Strong expertise in **Microsoft Azure & AWS** and worked with Azure API Gateway, Azure Functions, and **CI/CD Pipelines using Azure DevOps**.
- Implementation of security best practices using **jwt OAuth2, authentication**.
- Hands on experience with **SQL server, PostgreSQL, and RabbitMQ, NoSQL, MongoDB**.
- Proficient in **version control systems** such as **Git**, and in Build tools such as **Visual Studio Code, SQL Server Management Studio**.
- Hands on experience in **NodeJS**, Project Mangement Tools like **JIRA, TFS** and Logging tool like **Log4Net**, testing tools like **Postman, SOAP UI, Swagger UI**.
- Strong leadership, mentoring, and communication skills.dynamic user interfaces Team player with the ability to work effectively in cross-functional teams.
- Quick learner, adaptable to new technologies, and passionate about continuous learning.

TECHNICAL SKILLS:

Microsoft Technologies	.NET Core, ASP.NET, ASP.NET Core, C#, VB.NET, ADO.NET, Web API, Entity Framework, Core, WCF, Windows Services.
Web Technologies	Web Services, HTML, CSS, SOAP, WSDL, AJAX, XML, XSL,XSLT, ASP.NET MVC, Web API, Typescript, Angular, JavaScript, Bootstrap, React.js, Node.js, Angular, RESTful Services.
Database Technologies	SQL Server 2022, PostgreSQL 16, MongoDB, SQL Server, Oracle (11g/10g/9i), T-SQL, PL/SQL, Kafka.
Programming Languages	C#, ASP.NET, VB.NET, VBScript, HTML, CSS, AngularJS, DHTML, JavaScript.
Development Tools	Visual Studio 2022, Azure Data Studio, Docker, SQL Server Management Studio 19, SQL Server Management Studio, JIRA.
Frameworks	xUnit 2.x, Azure Kubernetes Service (AKS), OAuth2, Apache Kafka 3.x, Swagger UI 5.x, Postman, SOAP UI, SharePoint, RabbitMQ.
Version Control	Git, TFS, VSS, VSTS, GitLab
Reporting Tools	SSRS, SSIS, Crystal Reports, Jira, Confluence
Software Tools	Azure DevOps, Jenkins, Docker, Kubernetes
Operating Systems	Windows (7/8.1/10), Linux, macOS, Unix
Methodologies	Agile, Scrum, OOPS, OOAD.

PROFESSIONAL EXPERIENCE:

Blue Cross Blue Shield, Chicago, IL – Sr. Full Stack .Net Developer -

May 2023 to till date

Roles & Responsibilities:

- Worked within an **Agile (Scrum)** environment, participated in daily stand-ups, sprint planning, and retrospectives, and contributed to bi-weekly sprints and ensuring smooth project execution.
- Designed and implemented a **microservices architecture with Docker & Azure Kubernetes Service (AKS)** for scalability and fault tolerance.
- Designed and implemented scalable, event-driven **microservices architecture** using **ASP.NET Core 8 Web API** following **Domain-Driven Design (DDD), CQRS**, and **Saga patterns** for high availability and resilience.
- Containerized **microservices using Docker** and deployed on **Azure Kubernetes Service (AKS)** with service discovery via **Azure API Management** and asynchronous communication using **Apache Kafka 3.x**, ensuring fault tolerance and real-time data processing.
- Utilized **Node.js** for lightweight real-time event processing for appointment notifications.
- Built high-performance **RESTful APIs** using **ASP.NET Core 8** with JSON data format, secured via **OAuth2 and OpenID Connect (OIDC)**.
- Utilized **Entity Framework Core 8** for database access, migrations, LINQ queries, and performance optimizations using lazy loading, eager loading, and query splitting.
- Developed and optimized **RESTful APIs using ASP.NET Core 8**, ensuring efficient data exchange in **JSON** format, leveraging **System.Text.Json** for high-performance serialization and deserialization, reducing payload size and improving API response times.
- Implemented **Entity Framework Core 8** for seamless data access, integrating with **SQL Server 2022 and PostgreSQL 16** with optimized query execution.
- Implemented **OAuth 2.1, OpenID Connect (OIDC), Azure AD B2C**, and **Zero Trust security** principles.
- Deployed and managed containerized **microservices on Azure Kubernetes Service (AKS)** with Azure API Management for scalability and security.
- Integrated **API Gateway with Azure services** like **Azure Functions, Azure Service Bus, and Application Gateway**, optimizing API load balancing, failover handling, and traffic management.
- Developed scalable and modular applications using **Angular 19 and TypeScript 5**, implementing lazy loading, reactive forms, **RxJS** for state management, and dynamic component rendering.

- Developed modern, single-page applications (SPA) using **Angular 19, TypeScript 5, SCSS**, ensuring a responsive and accessible UI.
- Developed responsive healthcare **web applications** using **HTML5, CSS3, and Bootstrap**, ensuring **mobile**-friendly design for patient portals and medical records access across devices, improving user engagement and accessibility.
- Developed a secure, modular **EHR system** using ASP.NET Core 8 and Angular 17 with HIPAA-compliant PHI handling and audit logging.
- Integrated real-time workflows into the **EHR** using Azure Service Bus and Apache Kafka for appointments, labs, and medication updates.
- Implemented stored procedures, triggers, and views for complex transactional operations, ensuring data integrity, consistency, and high-performance queries while maintaining compliance with **HIPAA regulations**.
- Enhanced UI for healthcare dashboards and patient portals by integrating **dynamic tables, charts, and forms** using **AJAX**, optimizing patient data entry, prescription management, and real-time health metrics tracking for clinicians.
- Designed and optimized relational database schema using **SQL Server 2022** and **PostgreSQL 16**, ensuring efficient data normalization, indexing, and partitioning to handle large-scale patient records securely.
- Built **SSRS reports** to provide administrators with detailed insights into claims processing, patient history, and financial performance.
- Developed and optimized **SQL** stored procedures for automating complex business logic in healthcare applications, such as patient data processing, billing calculations, and report generation, ensuring efficient data manipulation and error handling.
- Used **Apache Kafka, Azure Service Bus, and RabbitMQ** for real-time messaging in claims processing, appointment scheduling, and notifications.
- Implemented unit testing with **xUnit 2.x**, component testing, and contract testing with Pact.
- Used **Karma** for UI testing, with Protractor replaced by Playwright for end-to-end automation.
- Leveraged **Postman, SOAP UI, and Swagger UI** for API testing and validation.
- Configured **Azure DevOps CI/CD** pipelines and **GitHub Actions** for automated integration, testing, and deployment.
- Deployed **Azure Functions** for automating insurance eligibility verification, prescription approvals, and billing workflows. implemented **Azure Event Grid & Logic Apps** for data integration and workflow automation.
- Integrated **Azure Blob Storage & DICOM** support for secure storage and sharing of medical images, patient records, and prescriptions.
- Automated unit tests, code quality checks, and security scans in the **CI/CD pipeline** using Azure DevOps, enforcing best practices and maintaining high code quality and secure deployments for healthcare applications.
- Used **Git** for managing source code and implementing branching strategies.
- Leveraged **GitHub & Azure Repos**, using **GitOps** principles for managing infrastructure and application releases.
- Utilized **Visual Studio 2022, Visual Studio Code, Azure Data Studio, and Docker Desktop** for a seamless development workflow.
- Integrated **Log4Net** for centralized logging in the Patient Care Management System, capturing detailed logs for error tracking, performance monitoring, and **HIPAA**-compliant audit trails, with storage in **Azure Blob Storage**.
- Used **JIRA, Confluence, and Azure Boards** to track sprints, manage tasks, and document technical decisions.
- Ensured **HIPAA** compliance in the Patient Care Management System (PCMS) by implementing end-to-end data encryption (AES-256, TLS 1.3), role-based access control (RBAC), and audit logging, ensuring secure handling of **Protected Health Information (PHI)**.
- Integrated security and compliance monitoring using **Azure Security Center** and Application Insights, implementing automated audit trails, anomaly detection, and PHI data masking to prevent unauthorized access and maintain **HIPAA, HITRUST, and SOC 2 compliance**.

Environment: SDLC, Microservices Architecture, ASP.NET Core, EHR, Web API, NodeJS, RESTfulAPI, Entity Framework Core, ADO.NET, JSON, Azure Cloud, OAuth2, Augular 17, HTML, CSS, TypeScript, SQLServer, PostgreSQL, Apache Kafka, Xunit, Karma, Cucumber, Postman, SOAP UI, Swagger UI, Azure Deveops CI/CD, Git, Git for version control, Vistual studio, SQL Server Management Studio, JIRA, HIPPA

Delta Airlines, Atlanta, GA - Sr. Full Stack .Net Developer -

November 2021 to March 2023

Roles & Responsibilities:

- Involved in various phases of the **Software Development Life Cycle (SDLC)** using **Agile** methodology
- Implemented **microservices architecture** leveraging **.NET 7** and **Docker** for containerization, improving the scalability and resilience of the flight booking, customer profiles, and ticket management services.
- Built backend services using **ASP.NET Core 7** and **C#**, optimizing real-time flight searches, booking, and ticketing.
- **Developed RESTful APIs** using **ASP.NET Core 7**, implementing scalable and efficient services for flight booking, customer management, and ticketing with seamless integration and comprehensive documentation via **Swagger UI**.
- Utilized **Entity Framework Core 7** to manage complex database transactions, optimizing queries for flight schedules and booking.
- Used advanced SQL Server features and **MongoDB** integration for NoSQL data storage flexibility.
- Integrated **MongoDB** as a NoSQL database solution to store dynamic, unstructured customer data such as preferences, booking history, and providing flexibility and scalability for the Airline Ticket Management Portal.
- Used **JSON** for structured data exchange between frontend, backend, and third-party flight reservation systems.
- Deployed the application on **Azure Kubernetes Service (AKS)** to enhance scalability and high availability during booking spikes.
- Configured **Azure API Gateway (APIM)** to manage and **secure APIs** for the airline's **flight booking system**, ensuring high availability, scalability, and optimized performance during peak travel seasons.
- Implemented **OAuth2.0** and **OpenID Connect** for secure user authentication and authorization using **Azure Active Directory B2C**, enabling customers to securely manage profiles and bookings.
- Monitored and analyzed **API usage** via **Azure API Management's analytics** and logging features, enabling the airline to track service performance, detect anomalies, and improve customer experiences through **real-time API traffic insights**.

- Developed responsive flight booking and check-in web applications using **Angular 19, HTML5, CSS3, JavaScript (ES6) and Bootstrap 5**, ensuring mobile-friendly designs and smooth user experiences across different devices for travelers booking flights and managing reservations.
- Integrated **RabbitMQ** for real-time asynchronous messaging, supporting booking confirmations and flight status updates.
- Used **xUnit** for unit and integration testing, ensuring backend service reliability.
- Validated UI components with **Jasmine**, ensuring an error-free flight search and booking experience.
- Utilized **Postman, Swagger UI 5.x**, and **SOAP UI** for API testing and documentation, ensuring seamless front-end and back-end integration and collaboration.
- Built **CI/CD pipelines in Azure DevOps** for automated builds, testing, and deployments, improving release efficiency.
- Implemented **SharePoint** for document management, enabling collaboration and seamless access to flight schedules, manuals, and internal documentation.
- Leveraged **Azure Functions** for automating workflows like flight status updates and customer notifications.
- Integrated **SonarQube 10** for static code analysis, ensuring clean, maintainable, and high-quality code.
- Used **Git** for source code management, ensuring efficient tracking, branching strategies, and collaboration.
- Developed with **Visual Studio 2022** and **SQL Server Management Studio 19** to enhance development productivity and database management.
- Integrated **Log4Net** for application logging, providing insights into system performance and enabling efficient error tracking and troubleshooting.
- Managed agile project workflows and tasks with **JIRA**, ensuring efficient sprint planning, progress tracking, and timely delivery of project milestones.

Environment: ASP.NET Core 7, .NET 7, Docker, Azure, OAuth2.0, Entity Framework Core 7, MongoDB, NoSQL, Angular, HTML, CSS, JavaScript, Bootstrap, JSON, RabbitMQ, XUnit, Postman, Swagger UI, SOAP UI, CI/CD pipelines, SonarQube, Git, Vistual Studio, SQL Server Management Studio, Log4Net and JIRA.

State of Missouri, Jefferson City, MO – Full stack .Net Developer -

May 2019 to Sepetmber 2021

Roles & Responsibilities:

- Used **Scrum framework** for project execution, ensuring continuous feedback, rapid iterations, and improved responsiveness to business requirements.
- Designed and implemented a **Model-View-Controller (MVC)** architecture for the State Employee Portal, ensuring a clean separation of concerns and improving maintainability and scalability of the application.
- Utilized **ASP.NET MVC 5** for backend development to provide a scalable solution for employee profile management, leave request tracking, and payroll processing.
- Implemented **RESTful web services** using **ASP.NET MVC** to handle communication between the front-end and back-end, ensuring efficient and secure data exchange.
- Integrated **Entity Framework 7** to streamline database operations, including object-relational mapping and database migrations, improving performance and reducing manual SQL management for dynamic data retrieval.
- Employed **JSON format** for data exchange between front-end applications and backend services.
- **React’s** component-based structure allowed us to create reusable modules (e.g., forms, dashboards, alerts), reducing development time and simplifying future maintenance or enhancements for Missouri’s internal teams.
- Designed responsive, user-friendly interfaces using **ASP.NET MVC** combined with **HTML5, CSS3**, and **JavaScript**, incorporating **Bootstrap** for mobile-first design principles and **Ajax** for dynamic content updates.
- Integrated **Ajax** calls for real-time updates, reducing page load times and enhancing the user experience for employees accessing leave balances and training schedules.
- Managed data storage and optimized queries using **SQL Server 2022**, ensuring secure and efficient storage of employee information, leave data, pay details, and state announcements.
- Utilized **SQL Server** stored procedures and queries to ensure fast and secure data retrieval, improving overall system performance for real-time employee portal interactions.
- Leveraged **SQL Server Management Studio (SSMS)** for database design, query optimization, and troubleshooting.
- Applied **XUnit** for writing unit tests to validate core functionalities of the portal, such as employee profile updates, leave approval workflows, and payroll calculations, ensuring the stability and reliability of the application.
- Utilized **TFS (Team Foundation Server)** for version control, collaborating seamlessly with the development team to track progress, manage branches, and ensure continuous integration and delivery (CI/CD) throughout the development lifecycle.
- Developed, debugged, and deployed the State Employee Portal using **Visual Studio 2022** for backend code, **Visual Studio Code** for frontend development, and **SQL Server Management Studio** for efficient database management.
- Integrated **Log4Net** for centralized logging, enabling the tracking of critical application events, errors, and performance metrics, ensuring robust monitoring of the portal’s production environment.
- Led and managed the project using **TFS**, tracking progress through detailed task management, sprint planning, and timely delivery of features while maintaining transparency and communication with stakeholders.

Environment: MVC Architecture, ASP.NET MVC, ASP.NET Web API, C#, SQL Server, RESTful Web APIs, JSON, OAuth2, Entity Framework, SQL, XUnit, TFS(Team Foundation Server), SSMS(SQL Server Management Studio), Log4Net, Visual Studio, HTML, CSS, Javascript, Bootstrap.

Fidelity Investments, Boston, MA - .Net Developer -

April 2017 to March 2019

Roles & Responsibilities:

- Involved in the **SDLC phase of requirement analysis, design, and development** of the web based internet application tool using MVC modeling.
- Developed **RESTful APIs** using the **.NET Framework MVC** architecture to handle employee CRUD operations and integrate business logic.
- Utilized **ADO.Net** to efficiently interact with **SQL Server** for executing stored procedures, queries, and managing database operations.
- Used **ADO.Net** to handle database connections, transactions, and data retrieval with optimized error handling and performance.
- Integrated **SOAP Web Services** for external system communication and data exchange.

- Developed stored procedures, Views, and automated **SQL scripts** for database maintenance, deployment, and installation.
- Developed a responsive and dynamic user interface using **HTML**, **CSS**, **JavaScript**, and **AJAX**, ensuring smooth user interactions and real-time updates.
- Implemented interactive features and enhanced user experience using **jQuery** for form validation, data manipulation, and **AJAX** calls.
- Designed and implemented **SQL Server** database schemas to store employee records, task assignments, and performance reviews.
- **Amazon S3** was used for secure and scalable storage of training data.
- **AWS Lambda** and **AWS Step Functions** orchestrated workflows to automatically trigger model retraining and deployment.
- **AWS CloudFormation** and **Terraform** (IaC tools) were used to maintain consistency and repeatability across development and production environments.
- Wrote complex **SQL queries** and used stored procedures to retrieve and manipulate data efficiently.
- Optimized database performance using **stored procedures** and advanced SQL techniques for faster data retrieval and reporting.
- Developed unit and integration tests using **xUnit** to ensure code quality and application functionality, ensuring minimal defects and robust backend functionality.
- Integrated automated testing in **CI/CD pipelines** to ensure consistent deployment and stability.
- Designed and maintained a **SQL Server** database for efficient data storage and retrieval. Used **SQL Server Integration Services (SSIS)** for data extraction, transformation, and loading (ETL) processes.
- Integrated **Log4Net** for logging purposes, enabling detailed application logs and error tracking to monitor application performance and troubleshoot issues.
- Managed project tasks and tracked progress using **JIRA**, ensuring proper task allocation, issue tracking, and sprint progress monitoring.
- Utilized **Visual Studio** as the primary IDE for development, leveraging debugging tools, integrated testing features, and efficient code management.

Environment: SOAP, XML, ADO.NET, SQL, HTML, CSS, JavaScript, Ajax, XUnit, jQuery, SSIS, Log4Net, JIRA, Visual Studio.

Hudson's Bay Company, Bangalore, India - .Net Developer -

June 2015 to Feb 2017

Roles & Responsibilities:

- Designed and developed applications following the **Waterfall methodology**, ensuring a structured approach to requirement gathering, system design, implementation, testing, deployment, and maintenance.
- Developed the application using **WebForms** in the **.NET Framework** to create a dynamic user interface for a feature-rich e-commerce platform, focusing on seamless integration with the backend.
- Integrated **SOAP-based Web Services** for secure communication between the e-commerce platform and external third-party services, such as payment gateways and inventory management systems.
- Utilized **ADO.NET** to facilitate efficient data access and management in the application, optimizing performance for CRUD operations and real-time inventory updates.
- Used **XML** for data exchange with external systems and for storing configuration data, ensuring a standardized approach for communication between various services and the e-commerce application.
- Designed and developed the frontend of the application using **HTML5**, **CSS3**, and **JavaScript** for creating a responsive, interactive user experience on both desktop and mobile devices.
- Leveraged **jQuery** and **Ajax** to enhance user experience by making asynchronous calls to the server, ensuring faster page loading and better real-time interaction.
- Utilized **PostgreSQL** for the e-commerce platform's database, optimizing relational data storage and ensuring scalability for growing product catalogs and customer data.
- Developed unit tests using **XUnit** to ensure high-quality, bug-free code in critical areas of the e-commerce application such as payment processing, user authentication, and order management.
- Managed the project's source code using **SVN (Subversion)**, ensuring version control, team collaboration, and proper codebase branching for parallel development of features.
- Managed the e-commerce platform development lifecycle using **Jira**, tracking and prioritizing tasks, bugs, and features within an Agile framework.

Environment: ASP.NET, ADO.NET, SOAP, XML, HTML, CSS, javaScript, jQuery, Ajax, PostGreSQL, XUnit, SVN, JIRA.

Education – Bachelor’s Degree in Computer Science at JNTUH – JUNE 2011 to MAY 2015
