Summary

Senior Software Engineer with 8+ years of experience in designing and implementing scalable applications using C#, ASP.NET Core, Azure, AWS, Angular and React. 5 years of specialized experience in the healthcare industry, delivering secure, compliant, and high-performance solutions.

Industry Expertise

Healthcare

SKILLS

C# • C/C++ • Java • Python • JavaScript • TypeScript • Node.js • Angular • React • Next.js • Blazor • ASP.NET • ASP.NET Core • ASP.NET MVC • RESTful API • MS SQL Server • PostgreSQL • MySQL • MongoDB • LINQ • Entity Framework Core • Microservices • RabbitMQ • Azure • AWS • xUnit • NUnit • SonarQube • Git • GitHub • GitLab • CRM • Agile

Experience

Cardinal Health

Remote

Senior Software Engineer

06/2024 - 08/2025

- Migrated large-scale monolithic ASP.NET MVC applications to Microservices using ASP.NET Core 8 and Angular 18; designed RESTful APIs and integrated inter-service communication with gRPC, while ensuring adherence to HIPAA compliance.
- Engineered a secure EHR system featuring patient registration, appointment scheduling, and clinical documentation; boosted data retrieval speed by **30%** and enhanced operational efficiency for healthcare providers.
- Optimized Angular 18 frontend performance by implementing lazy loading and modular module loading, resulting in a **50%** reduction in load times and improving user retention.
- Architected Azure infrastructure on Azure Kubernetes Service, using Azure Service Bus, Azure Application Gateway, Azure Front Door, Azure Application Insights and Azure DevOps.
- Leveraged AKS to containerize and orchestrate microservices, enabling auto-scaling and optimized resource utilization – reducing cloud infrastructure cost by **35%**, saving **\$15k** per month.
- Architected event-driven workflows using Azure Service Bus to decouple 24 services, ensure reliable message delivery, and enhance system elasticity and fault tolerance.
- Configured Azure Application Gateway and Azure Front Door for global load balancing, SSL termination for **10 million** requests monthly, enabling intelligent traffic routing, improving application performance and security.
- Engineered a globally distributed data layer using Azure Cosmos DB, delivering low-latency access for **25** microservices and scaling to process **50+ million** records across 3 regions.
- Established robust observability by integrating Azure Application Insights for real-time monitoring, distributed tracing, and real-time alerting, enhancing system reliability and issue resolution.
- Established Datadog dashboard for resource usage and log monitoring, leading to a 20% decrease in system downtime and annual cost savings of **\$200k**.
- Deployed NGINX Reverse proxy within AKS cluster to manage internal service traffic, support path-based routing, and enforce security policies.
- Implemented Health Check APIs across microservices running on AKS, enabling automatic health monitoring via Kubernetes liveness and readiness probes, improving system resilience and reducing downtime.
- Developed an advanced authorization system leveraging OAuth and Claims package in .NET Core; ensured secure access for **100k+** users through Azure Active Directory and Azure Key Vault integration.
- Automated build and release pipelines using Azure DevOps, implementing CI/CD workflows to streamline deployments, minimize errors, and accelerate delivery cycles.
- Designed intricate SQL queries and stored procedures for the Medical Research Data Repository, resulting in a **40%** increase in data retrieval speed for researchers and analysts utilizing the database.
- Integrated Apache Kafka to enable real-time data streaming and event-driven communication across distributed systems, improving reliability and throughput by **20%**.

Experience

StackPath

Dallas, TX

Senior Software Engineer

01/2022 - 05/2024

- Converted a legacy monolithic application based on VB.NET into a microservices architecture, employing the SAGA pattern with ASP.NET Core, RabbitMQ, and AWS Lambda, resulting in significant performance enhancements.
- Spearheaded the integration of LINQ with ADO.NET to streamline database interactions and modernize data access layers, reducing query time by **40%** for high-volume data processing.
- Built 3 reusable React component libraries, significantly improving development efficiency and consistency.
- Implemented Swagger-based API documentation across microservices deployed on AWS Lambda, improving API usability and accelerating front-end integration.
- Led transition to an event-driven model, boosting processing speed by **30%** and task throughput by **25%** while enabling real-time, high-volume asynchronous data handling.
- Conducted code reviews and provided mentorship to 2 junior developers via code reviews and pair programming, fostering a collaborative environment and strengthening a team of 7 developers.

USAA

Plano, TX

Software Engineer II

06/2018 - 10/2021

- Maintained and managed over 10 microservices with fully automated testing and production pipelines, utilizing CQRS pattern.
- Influenced complete Software Development Life Cycle (SDLC) including analysis, design, implementation, testing, and maintenance for 3 web applications with agile/scrum methodology.
- Created a detailed testing architecture utilizing SonarQube alongside xUnit to ensure robust performance in both Angular and C# projects; achieved a measurable 8% improvement in overall code quality.
- Achieved **95%** code coverage by applying Test-Driven Development with Cypress, Moq and MS Test, ensuring the robust and reliable software.
- Collaborated with cross-functional teams in an Agile/Scrum environment, participating in daily stand-ups and sprint planning to deliver high-quality software solutions and foster effective communication.

USAA

Plano, TX

Intern

05/2017 - 05/2018

- Extended WCF capabilities to develop a Service-Oriented Architecture (SOA), ensuring cross-platform compatibility for 10+ web services, which enhanced integration and reduced development time.
