

BRIAN SANDERS

Senior Backend Engineer

📞 (361)541-6458 @ briansanders1026@gmail.com 📍 Overton, TX

SUMMARY

An accomplished C#/.NET Developer with over 10 years of experience specializing in backend systems, enterprise application architecture, and cloud-native solutions. Proven expertise in C#, .NET Core, REST APIs, SQL Server, and microservices, with hands-on experience across Azure and DevOps pipelines. Delivered performance optimizations that reduced API response time by 40% and cut infrastructure costs by \$150K annually. Adept at translating complex business requirements into scalable, secure solutions, with a strong record of driving efficiency, reliability, and measurable impact across industries.

EXPERIENCE

Senior Backend Engineer

Snapshot

📅 06/2019 - Present 📍 Chicago, IL

- Designed and scaled a **cloud-native claims automation platform** using **.NET Core, C#, React, Redux** and **PostgreSQL** processing over **1.2 million claims annually** for top-tier insurers.
- Migrated legacy jQuery and Razor pages to **Angular 14** and **React**, ensuring modern UI functionality and 504 ADA compliance; reduced support tickets.
- Led the build of an event-driven policy notification service using **Azure Functions, Service Bus**, and **Entity Framework Core**, reducing processing latency by **55%**.
- Improved database performance by optimizing Entity Framework queries and SQL stored procedures, reducing average report generation time by **60%**.
- Spearheaded integration with external adjuster platforms using **RESTful APIs**, enabling real-time updates and reducing cycle time by **3 days per claim**.
- Conducted performance profiling and optimized backend services, resulting in a **42% decrease** in average API response time across critical endpoints.
- Contributed to DevOps pipeline automation via **Azure DevOps** and **Terraform**, enabling infrastructure-as-code and cutting provisioning time by **70%**.
- Refactored and optimized stored procedures and database schemas in **Entity Framework**, cutting report generation time by **60%** and supporting scalable data access for internal BI tools.
- Integrated **ArcGIS APIs** into logistics dashboards for route optimization, improving on-time delivery metrics by **18%**.
- Collaborated across product and analytics teams to launch a new mobile-first reporting dashboard, improving claims visibility for customers and agents.
- Mentored 4 mid-level developers on clean architecture and async patterns, improving team velocity and onboarding.

Software Engineer

Stripe

📅 08/2016 - 04/2019 📍 San Francisco, California

- Built core components of Stripe's **reconciliation and payouts system** using **.NET Core, C#,** and **RabbitMQ**, ensuring accurate fund transfers for **100K+ global merchants**.
- Built a web-based inventory audit tool using **ASP.NET MVC, Blazor, React** and **SQL Server**, replacing Excel-based workflows and saving over **40 labor hours/month** across 30+ store locations.
- Led migration of three mission-critical applications from Azure to on-prem infrastructure to meet compliance requirements, cutting cloud expenses by \$500K/year with zero downtime.
- Developed ledger and transaction tracking modules using **SQL Server** and **LINQ**, reducing reconciliation time from 12 hours to **under 2 hours daily**.
- Architected a refund processing engine integrated with fraud detection, resulting in **\$1.2M/year reduction in fraudulent payouts**.
- Delivered high-throughput API services for transaction exports, handling **over 1 billion records/month** while maintaining sub-500ms latency.
- Implemented automated rollback mechanisms using **CQRS** and **Event Sourcing**, increasing system fault tolerance.
- Led migration of legacy monolith to a **microservices-based architecture**, reducing deployment conflicts by **80%**.
- Set up observability using Prometheus and Grafana, enabling engineers to track SLA violations in real time.
- Participated in Stripe's "user-first" reviews to design frictionless API interfaces, enhancing developer experience and increasing adoption.
- Contributed to internal C# libraries for cryptographic security and payment validation used across multiple teams.

KEY ACHIEVEMENTS

Accelerated Deployment Cycles

Streamlined CI/CD workflows using Azure DevOps and GitHub Actions, achieving a **70% reduction in deployment time** and increasing release frequency at Snapshot.

Boosted Claims Processing Speed

Engineered a rules-based claims validation engine in C#, improving automation accuracy and reducing manual intervention by **over 60%**, directly contributing to faster policy settlements.

Improved System Scalability

Led the migration of monolithic services to Azure microservices architecture at Walmart, enhancing system resilience and cutting cloud infrastructure costs by **\$150K annually**.

SKILLS

Hard Skills

C#, .NET (Framework, Core, 4.8 – 8), ASP.NET, MVC, Node.js, JavaScript, TypeScript, jQuery, AJAX, HTML5, CSS, Bootstrap, Razor, React, Angular (v9+), Blazor, Python, C++ (esp. for UI/UX and data processing), SQL (MS SQL, PostgreSQL, Oracle, T-SQL, DB2), NHibernate, Entity Framework/Core, LINQ, RESTful API, Microservices, MVVM, N-tier, Multi-threading, asynchronous, Git, GitHub, TFS, Azure DevOps, Jenkins, CI/CD, Unit Testing, TDD, MS Test, Automated Testing, Version control, code review, Agile, Scrum, SDLC, Microsoft Azure (DevOps, CosmosDB, AI Services, OpenAI integration, ADF Pipelines), AWS, Docker, Kubernetes, Terraform, LDAP, Infor ION, Machine Learning and OpenAI integration, ArcGIS Pro, ArcObjects, Scrapy, MongoDB, Fabric, Databricks, Unity Catalog

Soft Skills

Communication (written and verbal), Team collaboration & cross-functional coordination, Client interaction & stakeholder communication, Leadership, mentorship, Analytical thinking and problem-solving, Decision-making and evaluative judgment, Time management and multitasking, Adaptability and proactive attitude, Knowledge sharing and documentation, Professionalism and accountability

CERTIFICATION

Microsoft Certified: Azure Developer Associate

Validated expertise in developing, deploying, and maintaining cloud applications and services using Microsoft Azure, with a focus on .NET-based solutions.

RESTful Web API Design: Udemy

Completed an in-depth course on designing and building secure, scalable RESTful APIs using C# and ASP.NET Core, emphasizing best practices in authentication, versioning, and documentation.

EXPERIENCE

Full Stack Developer

Salesforce

📅 01/2014 - 03/2016 📍 San Francisco, California

- Built and maintained customer onboarding and account configuration tools using **ASP.NET MVC**, **C#**, **AngularJS**, and **SQL Server**, powering initial setup for over **200K enterprise customers**.
- Built high-traffic APIs using .NET Core and C# for Stripe's fraud detection system, supporting over 1M transactions per day with 99.99% uptime.
- Launched a modular pricing rules engine that allowed real-time pricing adjustments via UI; boosted sales support efficiency by **34%**.
- Migrated payment processing UI from ASP.NET WebForms to Angular 11+, reducing load times by 47% and cutting feature development time in half.
- Integrated identity management into Salesforce's admin portal using **SAML**, **OAuth2**, and **Active Directory**, reducing security incident rates by **60%**.
- Developed reusable components for internal apps using **Razor**, **Bootstrap**, and **AJAX**, increasing development speed by **25%** across 5+ engineering teams.
- Built automated provisioning tools using **PowerShell**, **C#**, and internal APIs, cutting onboarding time from 2 days to **4 hours**.
- Migrated legacy SQL queries to parameterized stored procedures, improving query security and reducing SQL injection risk.
- Wrote 100+ test cases and integrated them with **Selenium** and **MSTest** for continuous UI test automation.
- Led daily stand-ups and coordinated backend/frontend handoffs with globally distributed teams.
- Received internal excellence award for reducing licensing issue backlog by automating error resolution workflow.

Software Engineer Intern

Google

📅 07/2013 - 02/2014 📍 Los Angeles, CA

- Contributed to the **Google Drive backend platform**, implementing C#/.NET-based integration tools for enterprise file migration.
- Built a multi-threaded file transformer in **C#** to process and sanitize legacy file types, enabling smooth transition for **50+ enterprise clients** migrating to Drive.
- Wrote automated test scripts in **NUnit** and integrated with CI pipeline, improving test feedback time by **45%**.
- Optimized a file deduplication algorithm that improved storage savings by **8TB across all enterprise accounts**.
- Developed internal debugging dashboards using **JavaScript**, **HTML5**, and **Google App Script** to assist support engineers.
- Delivered a final intern project on data sanitization tooling that was adopted by 3 internal onboarding teams.
- Shadowed senior engineers during code reviews and participated in Go/Java training, gaining exposure to distributed systems.
- Presented engineering work in intern demo day, receiving top 10% feedback from mentors and peers.

EDUCATION

Bachelor of Science in Computer Science

Texas Tech University

📅 08/2009 - 05/2013 📍 Lubbock, Texas,
