

ANDRES FELIPE SANCHEZ PEREIRA

IT Quality Assurance Lead | QA Senior Analyst | Agile Testing

Orlando, FL | 689-242-5424 | afsanchezp@hotmail.com | linkedin.com/in/andres-felipe-sanchez-pereira-19665085

RESUME SUMMARY

Bilingual QA professional (English/Spanish) with over 10 years of experience working in software testing, automation, and quality standards across Agile and traditional development environments. I have led teams of 50+ engineers and 4 QA Leads, built automation frameworks from scratch, and consistently delivered results that actually show up in the numbers, 70% fewer production defects, QA cycles cut from 4 weeks to 2, and automation coverage that went from 12% to 60%. My background covers the full testing spectrum: test planning, case design, defect tracking, SQL data validation, and end-to-end coverage across web, mobile, and API platforms. I work well with cross-functional teams and have additional experience managing digital projects and leading process improvement consulting engagements.

SKILLS

Testing: Manual Testing (Functional, Regression, UAT, E2E) · Test Planning & Case Design · Test Coverage Analysis

Automation: Playwright · Selenium · TypeScript · Jenkins · GitHub Actions

API & Performance: Postman · Swagger · SOAP UI · REST & SOAP APIs · JMeter

Data & Databases: SQL Scripting · Data Validation · ETL Testing · MS SQL Server · MySQL

Tools & Tracking: JIRA · Zephyr · Trello · GitHub · Power Bi · M365

Methodologies: Agile (Scrum, SAFe) · Kanban · Waterfall · SDLC · CI/CD · QA Metrics & KPIs

Soft Skills: Team Leadership · Mentoring · Cross-functional Collaboration · Stakeholder Communication

WORK EXPERIENCE

QA Automation & Digital Transformation Consultant | Javeriana University / Ecopetrol (Independent) *Jun 2025 – Present*

- Build and roll out test automation solutions using Playwright in VS Code, helping clients ship software with high quality at releases.
- Validate data flows, REST API integrations, and system connections to make sure platforms hold up under real-world conditions
- Work directly with business and stakeholders in Agile settings to shape user stories and clarify acceptance criteria.
- Run digital transformation diagnostics for clients, identifying the best technology for the company's needs, to replace manual work or inefficient processes.
- Handle QA validation and functional testing across several projects at once, adjusting coverage strategy to match each client's risk profile.

Senior Lead QA Engineer | TransUnion

Jan 2022 – May 2025

- Led the QA / QC area with 4 QA Leads and a broader team of 50+ engineers covering manual testing, automation, API validation, and data integrity.
- Took QA cycle time from **4 weeks down to 2** by rethinking how testing was sequenced across sprints — parallel execution, earlier involvement, automation, and less waiting.
- Grew automation coverage from **12% to 60%** by building a proper framework with Playwright, VS Code, Jenkins, and GitHub Actions. Before that, most regression was done by hand.
- Cut the production defect escape rate by **70%** through a combination of structured test strategies — Functional, UAT, Integration, Regression, and Performance — and firm quality gates at every release.
- Owned the full QA process inside the SDLC — from test plan to certification to UAT sign-off — and kept engineering leadership informed with weekly metrics and status reports.

Senior QA Engineer | Globant

Nov 2021 – Jan 2022

- Ran test plans, test cases, and UAT for Salesforce CRM projects and REST API services. First release cycle came in with **15% fewer defects** than the baseline.
- Joined Agile ceremonies from day one and worked closely with developers to catch issues in the sprint rather than after it.

QA Master Engineer | Seguros Bolívar

Sep 2018 – Nov 2021

- I built the QA Team — recruiting and onboarding 15 engineers, defining how the function would work, and integrating it into the company's digital transformation program.

- Hired and onboarded **15 QA engineers from scratch**, setting up roles, standards, and the kind of team culture where people actually flag problems early.
- Brought post-release defects down by **40%** and shaved **30%** off test cycle time, mostly through automated regression, smarter prioritization, and a defect process that didn't let things fall through the cracks.
- Designed and ran Functional, Integration, and Regression test coverage for web platforms, REST APIs, and SQL data validation.
- Set up JIRA-based test management with end-to-end traceability, which made both stakeholder reporting and audit prep.

ADDITIONAL EXPERIENCE

Digital Project Manager – Davivienda Bank (2018)

Kept 3–5 digital initiatives running simultaneously — mobile banking, online onboarding, internal ops — and wrapped them all at 94% on-time delivery with budgets up to \$1M.

Product Owner – FASEM (2016–2018)

Owned the roadmap for an occupational health SaaS platform from first sprint to go-live. Finished with 96% schedule compliance and features in the hands of 5,000+ end users.

Process Improvement Consultant – Pontifical Javeriana University (2014–2015)

Mapped and redesigned academic and administrative workflows, cutting non-value-added activities by 30% and reducing cycle times on key university processes.

Functional QA Leader – IMG Process & Technologies (2012–2015)

Delivered functional, regression, and API testing (REST/SOAP) across multiple client engagements in a consulting model. Good training ground for working across different industries and tech stacks.

EDUCATION

M.S. Specialist, Quality & Process Management	<i>2013</i>
EAN University, Bogotá, Colombia	
B.S., Industrial Engineering	<i>2008</i>
Pontifical Javeriana University, Bogotá, Colombia	

CERTIFICATES

- Scrum Master Professional Certificate (SMPC) – Certiprof, 2020
- Scrum Product Owner Professional Certificate (SPOPC) – Certiprof, 2020
- Scrum Fundamentals Certified (SFC) – Scrum Study, 2020

LANGUAGES

Spanish (Native) · English (Professional Working Proficiency)
