 **(323)2061579**

 **Forney, TX.**

PROFESSIONAL SUMMARY

- **AWS ARCHITECT / AWS ENGINEER / DEVOPS ENGINEER**
Experienced, self-motivated & result-oriented AWS Architect, AWS Engineer and DevOps Engineer with a proven track record in Solutions Design for Cloud tech and Quality Engineering. Possess in-depth experience in transitioning multiple projects and ensuring seamless end to end delivery of services. Highly robust individual adept at learning and implementing new technologies quickly. Drive excellence in every project to deliver outstanding results. Skilled in evaluating current technologies to support short and long-term IT initiatives. Experience working in Software Development Life Cycle with respect to delivering Operations, Functional and technical Specifications, Resource Planning, Development, Testing, and Maintenance.

SKILLS

- AWS SDK, AWS CloudFormation, AWS Lambda, AWS System Manager, AWS SSM Parameter Store, Terraform
- AWS CloudWatch (Events and Logs), AWS SNS, AWS S3
- AWS Organization, AWS IAM, Active Directory, AWS Secrets Manager
- AWS Config Rules, AWS Trusted Advisor, AWS Control Tower
- Bash, JSON, YML, Python

PROFESSIONAL EXPERIENCE

- **PITCH TECHNOLOGIES. Alexandria, VA**
- **LEAD DEVOPS/CLOUD SECURITY ENGINEER**

SEPTEMBER 2022-PRESENT

- Provision AWS resources using management console as well as Command Line Interface.
- Plan, build and configure network infrastructure within VPC with public and private subnets, configure routing tables, security groups and internet gateways.
- Implement and maintain the monitoring and alerting of production and corporate servers/storage using CloudWatch.
- Configure NACL, Security Groups and WAF to secure the application and VPC network depending on access parameters provided and conditions.
- Leverage AWS cloud services such as EC2, auto scaling and VPC to build secure, highly scalable and flexible systems that can handle expected and unexpected load bursts.

- Jira, AWS Cloud9, AWS Code Commit, AWS Code Build, AWS Code Deploy, Code Build, Docker, Kubernetes, EKS, ECS.
- AWS Certificate Manager, AWS KMS, Snapshot Lifecycle Manager, AWS Cloud HSM
- VPC, TGW, IGW, NGW, Splunk
- Systems Manager, Route53, CloudFront, AWS Auto Scaling, Dynamo DB
- Git, GitHub, Jenkins, SonarQube, Maven, Nexus, Check style, Ansible and Dockerhub.
- AWS Security Hub, AWS Guard Duty, AWS WAF, AWS Shield, AWS Firewall Manager and AWS Inspector.

EDUCATION

Bachelor's degree in computer science

University of Buea

CERTIFICATIONS

- AWS Certified Solutions Architect - Associate

- Setup and configure VPC Peering for communication between EC2 instances created in separate VPCs.
- Encrypt and manage both server-side encryption such as KMS and AWS Client encryption library, and client-side encryption of S3 and databases in the cloud.
- Migrate databases and workloads from on premise servers to the cloud using tools such as AWS Data Migration Service (DMS), Schema conversion tool (SCT).
- Automate infrastructure and application deployment using Terraform.
- Evaluate and improve existing AWS deployments.
- Perform S3 bucket creation, access policies, and archive outdated data to Glacier through the Lifecycle policy configuration.
- Responsible for allocating, releasing, associating, and disassociating elastic IP addresses.
- Troubleshoot various customer technical problems and adhere to best practices.
- Good knowledge and experience using AWS Lambda for Server-less computing.
- Worked on administering various AWS Services using the AWS Console, CLI and SDK (python, Node.js).
- Collaborate with application developers, Project Managers and QA analysts to ensure proper testing, configuration and deployment.
- Experience with MySQL and RDBMS
- Experience on Version Control System (VCS) like GIT, GIT-Hub.
- Experience working on Docker Hub, creating Docker container images and handling multiple images primarily for middleware installations and domain configurations.
- Worked on ECS (Elastic container service) and Docker for deploying containers and involved in testing the micro services.

CLOUD 303, Lakewood, CO

AWS DevOps Engineer

June 2020 - September 2022

- Implemented security best practices in AWS including multi factor authentication, access key rotation, role-based

permissions, enforced strong password policy, configured security groups and NACLs, S3 bucket policies and ACLs, etc.

- Optimized cost through reserved instances, selection and changing of EC2 instance types based on re-source need, S3 storage classes and S3 lifecycle policies, leveraging Autoscaling etc.
 - Leveraged EC2 Create snapshot API call to create snapshots of EBS Volumes on scheduled intervals.
 - Configured CloudWatch alarm rules for operational and performance metrics for our AWS resources and applications.
 - Setup and configured logs files for detail monitoring and alerts notification when changes are made.
 - Architected and implemented continuous integration and deployment pipelines using Jenkins and other CI.
 - Configuring NACL, Security Groups and WAF to secure the application and VPC network depending on access parameters provided and conditions.
 - Automate provisioning of cloud infrastructure using CloudFormation, terraform.
 - Setup Ansible control and slave nodes and used playbooks for automation configuration of servers across environments.
 - Designed and provisioned a complete AWS Server-less Architecture to ease network traffic by using s3, Lambda function, SQS and DynamoDB as a distributed database.
 - Built a complete CI/CD pipeline from the scratch by using Git/GitHub as version control, Jenkins as CI Server and Ansible Playbooks for Application deployment to Development K8-Cluster
 - Understanding knowledge of Lambda extensions and how it is used.
-
- **eHealth Technologies, Monroe, NY**
 - **Principal Cloud Engineer |**

April 2020 – September 2022

- Designed and deployed cost-efficient, fault-tolerant, and scalable distributed systems on AWS Cloud.
- Design and implemented automation infrastructure for configuration management and orchestrated deployment using automation tools such as Ansible.
- Implement and enhance scripts in python.
- Creating containers using Docker
- Build and maintained Kubernetes clusters using AWS EKS

- Managed GitHub repositories/permissions including branching and tagging.
- Use AWS system manager to Automate operational tasks across resources.
- Implement Blue/Green deployment for software upgrades.
- Designed, built, deploy, and maintained Infrastructure on AWS using Infrastructure as Code Tools such as Terraform and Cloud Formation
- Implemented application and infrastructure monitoring and responsiveness using AWS CloudWatch and SNS.
- Created Ansible Playbook and CloudFormation to configure and deploy to various AWS environment.
- Collaborated with developers to ensure smooth running of the CI/CD pipelines.
- Integrated services like GitHub, AWS Code Pipeline, Code Build and AWS Code Deploy to create a deployment pipeline.
- Monitor for critical alerts on monitoring systems and respond accordingly.
- Respond to tickets on Jira.
- Provide system support to clients, troubleshoot and fix bugs and errors, and resolve any IT related issues.
- **TeamLogic IT, Colorado Springs, CO**
- **Solutions Architect |**

February 2018 – April 2020

- Architected and designed solution for tokenizing personal data using format preserving algorithm in cloud-based data lake using a tokenization solution
- Defined approaches and supporting the migration of IAM platform from private cloud to AWS public cloud
- Define solution for IDP working with Enterprise architecture team to support Federation and Authorization of API for third-party integrations using OAuth2 and OIDC specification.
- Design service specifications and built RESTful Web Services for supporting various end-user functionalities in Web and Mobile channels for enabling enhanced digital experience to end user
- Developing multiple proofs-of-concept and performing research for new technologies, platforms, and functionality
- Coordinating with multiple development teams, enterprise Architecture teams, and business stakeholders
- Create test cases and scenarios based on functional specification, requirements and product knowledge.
- Clearly document software defects, both by logging bug reports in JIRA and by communicating issues to the project team.
- Verify bug fixes submitted by developers.
