
PROFESSIONAL SUMMARY

Result-oriented, solutions-focused **Senior Data Modeler and BI Tech Lead /Tableau Certified & Microsoft Certified Power BI Analyst** with over **13+Years** of Analysis, Design, Development, Testing Enhancements (**SDLC**) of Enterprise Data Models (**Erwin**) Analytical Solutions using **Power BI, Tableau, Cognos, QlikView/Qlik Sense& Other BI Tools** along with **Data Analytics & Data Engineering** role.

- **8Years** of Strong experience in **designing, Developing, and Deploying Tableau Dashboards** and complex Queries to support business reporting needs, and Optimizing **Tableau dashboards** for performance and scalability in **Tableau (Desktop, Prep, Server & Public)**.
- Good experience with **Tableau Server (TSM)**, commands Installations & Configurations and works in production Support.
- Strong experience creating out-of-box/advanced charts/Reports like Waterfall, Scatter Plot & Donut, and Divergent charts etc. on Tableau desktop.
- **5+Years** of Strong experience in designing, developing, deploying **Power BI reports/dashboards, Complex DAX queries, Microsoft Fabric** to support business reporting needs, Optimizing **Power BI data models** for performance and scalability in Power BI (Desktop, Services).
- Provide ongoing maintenance and support for existing **Power BI** solutions & troubleshoot and resolve issues related to **Power BI reports and data integration**.
- **5+Years** of Strong experience with the Erwin data modeler tool to create comprehensive conceptual, logical, and physical data models for multiple domains.
- Extensive Knowledge **of Data Warehousing** concepts and Database concepts and create conceptual data models to identify key business entities and visualize their relationships, defining concepts and rules.
- Familiarity with **ETL (Informatica, DataStage, Talend)/ELT** processes and implementing data operations/solutions as per the data strategies.
- **4+Years** of experience in creating semantic layers for data modeling and reporting on At Scale, Dremio accelerator tools for better performance of the developed dashboards.
- **3+Years** of strong experience with **Cognos 11 Analytics, Cognos 10 8BI (Cognos connections, FM, Query Studio, Report Studio, Analysis Studio), Cognos ReportNet1.1 (Query Studio & Report Studio)** & Hands on experience in Creating a model in **Cognos Framework manager (FM)**.
- Good Experience in implementing end-to-end enterprise analytical solutions and involved in all phases of **SDLC (Agile, Waterfall SDLC Methodologies)**, preparing status reports, running status meetings, scrum calls, team management, offshore/onsite delivery models, requirement gathering, designing/architecting, Data Modeling, testing, pre-production, production, and post-production support.
- Strong experience in **Report Migration** with Migration Planning, Data Integration, Testing & Validation, Documentation, Collaboration, Continuous Improvement from legacy **BI tools** to the Most **Advanced BI Tools** as per the user's requirements.
- Experience in working with multiple Relational Databases including DB schemas creation in **Oracle 9i/10g, SQL Server, and My-SQL, IBM-Db2**.
- Good experience in Banking & Financials (Investment Banking like Retail, Commercial, Central and Lending like Personal, Mortgage, Auto, Business, Credits) and handled the business users as per the requirements.
- Having Knowledge of Cloud technologies like **Snowflake Sales force, Azure Cloud Developer & Architect**.
- Strong experience on Dashboard Deployments to higher environments using tools like **Eclipse, GIT, TeamCity/Jenkins, Bit bucket, and IBM- Udeploy (CI/CD process)**.

TECHNICAL SKILLS

DWH- Data Modeling & BI Reporting Tools	Tableau (Desktop, Server), Tableau Prep, Tableau Public, Power BI (Desktop, Services), Power Apps, Power Automate), SSRS, Erwin (RDBMS & Dimensional Data Model), Alteryx, Cognos (Report/Query/Analysis Studio's), Framework Manager (FM), Cognos TM1, QlikView (Desktop, Access Point, QMC), Qlik Sense, AWS-Quick Sight, SAP BO (Business Objects) & Micro strategy & Other BI tools Looker, DOMO, Spotfire etc.
DATABASE & Accelerator Tools	Oracle, SQLServer 2005/2008, My-SQL, IBM-DB2, T-SQL, SAP-HANA, Hadoop-HIVE, Teradata, PostgreSQL, MongoDB, AWS-RedShift, Google-BIG Query, At Scale, Dromio, Jethro.
LANGUAGES APPLICATION	SQL, PL/SQL, C, & C++, Java, Python, Confluence, GIT-HUB, Bit bucket, Udeploy, TeamCity, CI/CD Pipeline, Jira, Service Now, Trello card.
OPERATING SYSTEMS	Windows 2000/XP/NT, Unix/Linux.
ETL TOOLS & CLOUD	Informatica, DataStage, Talend, Snowflake, Salesforce, GCP, Azure Cloud Developer & Architect

PROFESSIONAL EXPERIENCE:

Goldman Sachs (GS), Salt Lake City, UT

Feb 2025 – Till Date

Role: Data Modeler, BI Tech lead/Developer/Data Analyst

Responsibilities:

- As a **Data Modeler, report analysts, and other stakeholders** to understand data requirements, design **ETL** processes accordingly, and also as a data modeler to design and implement data warehouse models that support business needs and create comprehensive documentation for data models, data dictionaries, and design specifications. Perform impact analysis to assess the effect of changes to data models on existing systems.
- Using **Erwin** to reverse-engineer existing databases to create models that represent the current state of the data architecture.
- Responsible for creating the **Data modeling** (Conceptual, Logical, Physical, 3nF, Dimensional) at both a project and enterprise level and Dimensional Modeling with experience in crafting conformed dimensions that can be used across Business Units.
- Ability to write SQL to query data (ideally ANSI SQL) queries as per the report requirement and do the consolidation for all the other SQLs for Agency modernization.
- Involved in all phases of **SDLC that comprise analysis, design, development, implementation**, and execution of enterprise analytical solutions while following established standards and processes.
- Created the **Database Mapping Sheets & Technical specification** documents for all Use cases Created Jira tasks and assigned those tasks to developers as per the sprint plan. Collaborate regularly with team members and actively participate in **architectural** decisions for the BI platform.
- Lead the Qlik platform setup and configuration for **QlikView and Qlik Sense**, overseeing the installation, setup, and management of **QlikView Server, Qlik Sense Server, Nprinting**, and associated services.
- Spearheaded the migration of **QlikView servers** to cloud infrastructure, improving performance, reliability, and reducing server downtime.
- Administered and maintained the **QlikView and Qlik Sense** environments, ensuring optimal system performance, high availability, and stability across development, acceptance, and production servers.
- **Migrated the QlikView DM in Qlik Sense DM** and improved the performance of the QS DM for creating the QS reports.

- Created the **QlikView** existing reports to QS with new business requirements and validated the reports as per the multiple data sources and frequency.
- Created the **QVDs** for all the required sources to create the **Qlik Sense reports** and replaced the sources in QS report.
- Responsible for administering **QlikView Management Console (QMC)**, ensuring proper configuration of user access, task scheduling, report publishing, and security settings to protect sensitive business data.
- Implemented and maintained the **QVD creation for Qlik reports** and compliance, ensuring role-based access control and data integrity within the Qlik environment.
- Led the configuration and management of **Nprinting** for report automation, including the creation, scheduling, and distribution of financial and operational reports to multiple stakeholders across different business functions.
- Responsible for Reports **deployments from Dev->UAT-> Prod server** where GIT HUB, code deployment. Involved in all the deployments from one environment to go live as well as Support & Maintenance in the Server.

Environment: Erwin DMI, QlikView (Desktop, Access Point, QMC), QS 2023(Hub, QMC Cloud), Nprinting, Tableau (Desktop, Prep, Server) 2024.X, Power BI (Desktop, Services), SAP BO (Universe(UDT),IDT,BI Launchpad, Web Intelligence (Webi), Procmon Scheduler, Alteryx Snowflake, Oracle 12c, SQL & PL/SQL, Toad, Windows XP, GIT, Confluence.

Genuine Parts Company (GPC), IND

Jul 2024 to Dec 2024

Project: Data Modelers to Power BI Migration

Role: BI Tech lead/Developer, Data Modeler, Data Analyst

- Gathering the requirements and creating logical data models to represent the structure of data in a business context, including entities, attributes, relationships, develop physical data models that map to specific database implementations, considering aspects like indexing, partitioning, and storage optimization.
- Load the transformed data into the target data warehouse, database, or other storage solutions and Design and manage **ETL workflows** to ensure data is processed efficiently. Responsible for data warehousing/Data Marts creation and use the normalization techniques, and data security, encryption, and compliance requirements in the cloud.
- Created the Database Mapping Sheets & Technical specification documents for all Use cases Created Jira tasks and assigned those tasks to developers as per the sprint plan. Collaborate regularly with team members and actively participate in architectural decisions for the BI platform.
- Responsible for the installation, configuration, and maintenance of the AtScale platform. Manages user access, permissions, and security settings within AtScale to protect sensitive data and Works on integrating At Scale with various data sources and BI tools to create a seamless data environment.
- Responsible for data exploration and analysis using the semantic layer provided by AtScale, deriving insights and trends from the data.
- Created different types of charts like Bar, Line, Pie, Area, and tree map, Donut and scatter Plots and waterfall charts, Geo Maps.
- Responsible for **Power BI Reports** development, administration, and support with security implementation in PBI services.
- Using **Power BI Rest APIs (Java & Python Solution)** to handle complex dashboards and automate the output as CSV/XLS data into their business user's email.
- Publishing into **Power BI Services** to discuss with end users and scheduling the dashboard as per the user's requirement.
- Creating the Sites/Roles and Groups and implementing Object-level/Row-level security (RLS) for all the end users to access the data as per their roles and zones and give permissions to access the server dashboards.
- Writing **GBQ- queries, Oracle-SQL Queries** and Testing and updating the Dashboards according to requirements, preparing the test cases documents for the tested Reports/Dashboards.

- Creating automatic downloading of the reports into PDF or CSV format and sending the emails to users using TSM commands and power shell scripting as per business requirements.
- Administer and support a multi-tier **Power BI and Tableau** infrastructure create and manage groups, workbooks and projects, database views, data sources and data connections.
- Create and develop data models, reports, and dashboards, Use Power Query to clean, transform, and load data and **DAX formulas** to create calculated columns, measures, and tables, and Optimize data models and reports for performance.
- Build custom apps using **Power Apps, Power Automate** tailoring them to specific business needs and designing user-friendly and responsive interfaces within **Power Apps**, Customize and configure existing Power Apps to improve functionality or add new features.
- Lead the implementation of **Power Apps and Power Automate solutions**, including customization and integration with other systems.
- Responsible for Reports deployments from Dev->UAT-> Prod server Via CI/CD process where GIT HUB, Jenkins used for code deployment. Involved in all the deployments from one environment to go live as well as Support & Maintenance in the Server.

Environment: Power BI (Desktop, Services), PowerApps, Power Automate, QlikSense2022, Tableau (2023.x), Informatica, Google Big Query (GBQ), Oracle 12c, SQL & PL/SQL, Toad, Windows XP, GIT, Jenkins, Confluence

CITI Private Bank (CPB), India

Jan 2020 to Apr 2024

Role: Sr. Tableau Developer/Technical Lead

Responsibilities:

- **Involved** in all phases of SDLC, including Requirements Collection, Design & Analysis of the Customer.
- Designed and developed advanced Tableau dashboards and visualizations to support executive decision-making and strategic business insights.
- Integrated Tableau with multiple data sources such as **Oracle, SQL Server, Redshift, and Snowflake**.
- Completed datasets using relationships, joins, and custom SQL queries to enable accurate and scalable reporting.
- Leveraged Tableau Prep and custom **ETL scripts (Python/SQL)** for data transformation and cleansing.
- Conducted performance tuning of Tableau workbooks by minimizing joints, reducing visual load, and optimizing extract strategies.
- Used Tableau Performance Recorder and server logs to identify and fix performance bottlenecks.
- Implemented Row-Level Security (RLS) and project-based access controls to protect sensitive data.
- Published dashboards to **Tableau Server**, managed workbooks, data sources, and user permissions.
- Extensively Python for data cleaning, transformation, and loading, advanced analytics and machine learning models using **Python**.
- Using Tableau Rest API's (Java & Python Solution) to handle complex dashboards and automated the output as CSV/XLS data into their business user's email. Integrate Python scripts within Tableau
Using Python scripting, end user's tableau dashboards **Integrated python** within tableau using TabPy and integrated multiple application within the organization also Optimize the performance of Tableau dashboards and data processing tasks
- Responsible for Tableau development, administration, and support, BO reports enhancements, (CMC) BO administration, and support with security implementation.
- Using Tableau Rest APIs (**Java & Python Solution**) to handle complex dashboards and automate the output as CSV/XLS data into their business user's email.
- Using **Python scripting**, end user's tableau dashboards Integrated tab multiple applications within the organization.
- Writing **T-SQL queries, Oracle-SQL Queries** and Testing and updating the Dashboards according to requirements, preparing the test cases documents for the tested Reports/Dashboards.
- Configure Tableau server security as required (Single sign-on (SSO), Kerberos, Active Directory (AD), SAML, SSL). Managing and administering various Sites on Tableau Server and Support server installations/configuration, Patches in Windows and Linux environments. Creating extract refresh schedules & Schedules.
- Responsible for Manage and administer **Tableau Online or Tableau Server** instances in the cloud, including user access, performance monitoring, and scalability.

- Created different types of charts/Visualization in **Tableau like Bar, Line, Pie, Area, Tree Map, Donut**, Scatter Plots and waterfall charts, Geo Maps as per the use case requirement.
- Migrated the existing BO (LOB's) reports to Cognos Report Studio reports to evaluate the performance of the existing reports and supported the existing reports enhancements and upgrades as per the client requirements.

Environment: Tableau 2023.X (Desktop & Server), 2021.X, Tableau Prep, Power BI (Desktop, Services), Cognos11 Analytics (Report Studio), Erwin, Alteryx Informatica, SAP-BO, Python, Snowflake, Hadoop-Hive, T-SQL, Oracle 12c, SQL & PI/SQL, Toad, Windows XP, GIT, Eclipse, Bit Bucket, TeamCity, IBM-UCD.

New York Life Insurance (NYL), IND

Jan 2018 to Dec 2019

Role: Sr. Tableau Developer/Technical Lead

Responsibilities:

- Analyze the requirements, create the custom SQL queries as per the report requirement and do the consolidation for all the other SQLs for Agency modernization. Regular interaction with the onsite team and client coordinators to discuss the requirements.
- Created different types of charts like Bar, Line, Pie, Area, tree map, Donut and scatter Plots and waterfall charts, Geo Maps.
- Developed charts using different functionalities like filters, Calculations and parameters, Conditional Formatting, creating variables, and applied conditional styles with Complex dashboard Trend indicators in Tableau Desktop
- Worked with Multiple data connections Using Multiple Measures like Individual Axis, Blended Axis, and Dual Axis charts.
- Works on integrating AtScale with various data sources and BI tools to create a seamless data environment. Design and implement data models that AtScale can use to create virtual cubes, ensuring the models are optimized for performance and scalability.
- Responds to and resolves incidents related to the AtScale platform, ensuring minimal downtime and disruption and ensuring that proper backup and disaster recovery plans are in place for the AtScale environment.
- Creating security for all the end users to access the data as per their roles and zones and give permissions to access the server dashboards.
- Creating automatic downloading of the reports into PDF or CSV format and sending the emails to users using TSM commands and power shell scripting as per business requirements.
- Testing and updating the Dashboards according to requirements and preparing the test cases for tested reports/Dashboards.

Environment: Tableau 2018.2 (Desktop & Server), Oracle 12c, SQL, Toad, Dromio, AtScale, Hadoop-Hive, Windows XP.

Capsico Health Analytics, IND

Jan 2017-Dec 2017

Role: Sr. Tableau Developer

Responsibilities:

- Analyze the requirements and design the charts and Dashboards as per the business requirements. Created the functional and technical specification documents for all dashboards.
- Responsible for creating the data model for claims perspective and creating the ddls as per the data model.
- Creating the mock data (As is data as per the health care information) using Tilda (Client application) and creating the sample table structure.
- Developed charts using different functionalities like filters, Calculations and parameters, Conditional Formatting, creating variables, and applied conditional styles and KPI Indicators in Complex dashboards.
- Working with Multiple data connections Using Multiple Measures like Individual Axis, Blended Axis, and Dual Axis charts.
- Creating security for all the end users to access the data as per their roles and zones and give permissions to access the server dashboards.
- Creating the Row level of security for all the end users to access the data as per their roles and zones and giving permissions to access the server dashboards
- Creating automatic downloading of the reports into PDF or CSV format and sending the emails to users using TSM commands and power shell scripting as per business requirements.
- Responsible for delivery of assigned modules/ components /phases of a project, status reporting, guiding the development team, estimation, planning & execution, knowledge transfer, and arriving at SLAs for steady.

Environment: Tableau 10.2 (Desktop & Server), Tableau Prep, PostgreSQL, Toad, Oracle, MS-Excel, Windows XP.

Truven Health Analytics, Inc., IND

April 2016-Dec 2016

Tableau Senior Developer and Data Modeler

Responsibilities:

- Gathering and analyzing the requirements and designing the charts and Dashboards as per the business requirement.
- Created different types of charts like Bar, Line, Pie, Area, tree map, Donut and scatter Plots waterfall charts, Geographical Maps, and Pareto charts. Created different tableau data extracts for creating the Visualizations.
- Works on data ingestion and transformation processes to prepare data for analysis within AtScale. Optimizes the performance of data queries within AtScale, focusing on reducing latency and improving efficiency.
- Responsible for data exploration and analysis using the semantic layer provided by AtScale, deriving insights and trends from the data.
- Creating the row level of security for all the end user to access the data as per their roles and zones and give permissions to access the server dashboards.
- Publish the dashboards into Tableau Server Create the Groups and Roles and Schedule the dashboard in Tableau Server as per the requirement.
- Deployed/Promoted the dashboards into higher environment Tableau Servers (Dev->UAT->Prod)
- Testing & Updating the Dashboards according to requirements and preparing the test cases for the tested Reports/Dashboards.

Environment: Tableau 9.3&10.x (Tableau Desktop & Server), Oracle 11i, Informatica, Windows XP.

AWAC, Singapore

Dec 2015 - Mar 2016

Role: Cognos Reports & Framework Manager Model Senior Developer

Responsibilities:

- Performed business analysis, requirement gathering, and design functional and technical specifications.
- Developed and changed to the existing FM Model as per the business requirement. Responsible for the development, maintenance, and enhancements of new reports
- Creating different types of reports like List Reports, Crosstab Reports, Chart Reports, Repeater reports and Master Detail Reports using Report Studio. Developed Drill through Reports and display user-specified reports, developed filters.
- These changes had to be made per the modifications made to the requirements by Business Primarily responsible for building, scheduling, and maintaining Daily, Weekly, Monthly, and Quarterly reports and supporting the Production support team to resolve issues in reports under tight time constraint.
- Test the Cognos report, prepare the test cases and promote the reports from one environment to another environment using Trello Card.

Environment: Cognos10BI (Report & Query & Analysis Studio) and FM, SQL-Server, Trello card, Windows XP.

Cisco, IND

Nov 2012 - Nov 2015

Role: Tableau Dashboard Developer

Responsibilities:

- Gathering and analyzing the requirements and designing BRDs FRDs as per dashboard requirements.
- Developed self-service Dashboards as per the business requirement and created different types of charts like Bar, Line, Pie, Area, tree map, Donut and scatter Plots, Waterfall charts, Geographical Maps, and Funnel and Bump charts.
- Creating the dashboard as per the user requirement using already created charts with different functionalities like Filters, Calculations, and parameters. Formatting, creating variables, and applying conditional styles.
- Regular interaction with client and On-site coordinator to discuss the requirements and develop the Complex dashboards using Conditional formatting with Trend indicators in Tableau Desktop.
- Creating the row level of security for all the end users to access the data as per their roles and zones and give permissions to access the server dashboards.
- Deployed/Promoted the dashboards into higher environment Tableau Servers (Dev->UAT->Prod)

- Responsible for delivery of assigned modules/ components /phases of a project, status reporting, guiding the development team, estimation, planning & execution, knowledge transfer and arriving at SLAs for steady.

Environment: Tableau 8.2 (Desktop. Public & Server), Social Media Websites/Apps, My-SQL, Big Data Hadoop- Hive, MS-Excel, Windows XP

INGENIX (United Health Care-UHG), IND

Jun 2012 – Nov 2012

Role: Cognos Reports & Framework Manager Model Senior Developer

Responsibilities:

- Performed business analysis, requirement gathering, and Understanding business requirements and converting requirements into BRDs, and FRDs to develop reports as per the client requirements.
- Good understanding of different layers in relation modeling (Database layer, Business layer, and Presentation layer)
- Creating different types of reports like List Reports, Crosstab Reports, Chart Reports, Repeater Reports, and Master Detail Reports, drilling through Reports and displaying user-specified reports, and developing filters' reports using Report Studio
- Responsible for publishing the reports from Dev server to prod server and maintaining those reports in the Cognos server.
- Responsible for tracking the INCs to make the necessary changes in live reports as per the user requirement.

Environment: Cognos8.4BI (Report & Query Studio) and FM, Oracle9i, Toad, SSAS, Windows XP.

Chrysler, IND

May 2011 to Jun 2011

Role: Cognos Reports & Framework Manager Model Developer

Responsibilities:

- Understand business requirements and convert those requirements into BRDs and FRDs to develop reports as per the client's requirements.
- Understand the SAP. UNV model and convert into Cognos FM Model and update the model created by the packages as per the report's requirements.
- Creating different types of reports like List Reports, Crosstab Reports, Chart Reports, Repeater Reports, and Master Detail Reports using Report Studio and Reports displaying user-specified reports and developing filters.
- Developed Drill by Creating different types of self-service/ad-hoc-based reports in Cognos query studio. Responsible for Fine-tuning the complex reports and testing as per the client requirements.
- Deployed/Promoted the dashboards into higher environment Cognos Servers (Dev->UAT->Prod)
- Responsible for tracking the INCs to make the necessary changes in live reports as per the user requirements.

Environment: Cognos10BI (Report & Query Studio) and FM, SAP BO, UNV, Oracle 10g, Windows XP.

GE Treasury, IND

Feb 2011 to Apr 2011

Role: Cognos Reports & Framework Manager Model Developer

Responsibilities:

- Performed business analysis, requirement gathering, and Understanding business requirements and converting those requirements into BRDs, and FRDs to develop reports as per the client requirements.
- Responsible for Fine-tuning the complex reports and testing as per the client requirements.
- Responsible for publishing the reports from the Dev server to the higher environment server and scheduling the reports as per the client requirements, maintaining those reports in the server.
- Deployed/Promoted the dashboards into higher environment Cognos Servers (Dev->UAT->Prod)
- Responsible for tracking the INCs to make the necessary changes in live reports as per the user requirements.

Environment: Cognos8.4BI (Report & Query Studio) and FM, Oracle9i, Toad, Informatica, Windows XP.

EDUCATION: Master of Science (MSC), 2005-2007.
