SUMMARY

- **Software Engineer** with 5+ years of experience delivering robust, scalable software solutions across ride-sharing, ad tech, and enterprise platforms.
- **Strong command** of backend and distributed systems using **Java, Python, Spring Boot, Apache Kafka**, and REST/gRPC API development.
- **Experienced** in building containerized microservices using **Docker** and **Kubernetes**, with cloud deployments on AWS (EC2, S3, ECS, Lambda) and infrastructure automation via Terraform and Jenkins.
- **Proficient** in front-end technologies including **React.js, TypeScript, Redux**, and secure integration with backend services for dynamic, user-centric applications.
- **Adept** at Agile methodologies, **CI/CD** pipelines, cross-functional collaboration, system design, performance tuning, and debugging in high-traffic production environments.
- **Effective** communicator with a track record of partnering with product managers, data scientists, **DevOps**, and QA teams to drive project delivery and maintain code quality standards.
- **Familiar** with observability, security, and compliance tools and practices, including **OAuth2.0, Prometheus, Grafana, JWT**, monitoring pipelines, and automated testing frameworks.

PROFESSIONAL EXPERIENCE

Full Stack Developer

May 2025 – Current

Uber | USA

- **Engineered** a real-time trip matching algorithm in **Java** and **Apache Flink**, leveraging **Kafka** streams and dynamic geohashing to reduce rider wait time by **11.2 seconds** during peak hours; collaborated cross-functionally with Ops and Data Science to fine-tune surge logic.
- **Architected** scalable RESTful and gRPC APIs using **Python (FastAPI)** and **Redis** for Uber Eats backend, improving order placement throughput by **125,000+ daily requests** and reducing latency by **94ms**; applied active listening during cross-team reviews to ensure alignment.
- **Refactored** legacy monolith components into containerized **microservices** using **Docker, Kubernetes**, and **Consul**, enhancing deployment frequency from monthly to **3x/week** and enabling zero-downtime rollouts; embraced team feedback to guide design decisions.
- **Devised** an intelligent feature flag system in **React + Redux**, enabling dynamic UI configuration across 12 regions and decreasing engineering response time by **4 hours** per incident; collaborated with PMs using empathy to prioritize release cycles.

Software Developer Intern

Jun 2024 – May 2025

MediaOcean | USA

- **Engineered** a RESTful microservice using **Java (Spring Boot)** and **PostgreSQL**, improving ad campaign data processing by **1.3 seconds per request** and supporting **17,000+ peak daily transactions**, while leveraging **Agile methodologies** to sync with cross-functional teams.
- **Optimized** complex **SQL** queries and indexing strategies across distributed **MySQL** and **PostgreSQL** clusters, cutting report generation time from **9 to 2.7 seconds**, while enhancing collaboration with BI analysts and product owners.
- **Refactored** legacy monolithic API into event-driven services using **Apache Kafka, Node.js**, and **RESTful Web Services**, achieving real-time sync across 6 services and reducing sync failures by **2,400/month**, demonstrating strong debugging and system design skills.
- **Implemented** secure **OAuth2.0** authentication for internal tools using **Spring Security** and **JWT**, enabling secure access to **4,500+ endpoints** and contributing to SOC 2 compliance with guidance from security leads.
- **Deployed** containerized apps via **Docker, Kubernetes**, and **Jenkins**, automating CI/CD pipelines and improving release frequency by **32 builds/week**, while clearly communicating deployment readiness to QA and product teams.
- **Led** a cross-team initiative to migrate logging infrastructure to **Fluent Bit** and **Amazon CloudWatch**, enabling structured log ingestion and reducing incident triage time by **3.4 hours/week** for SREs.

Senior Software Engineer

Jul 2019 – Jul 2023

MediaOcean | India

- **Engineered** an event-driven microservices architecture using **Java (Spring Boot)** and **Apache Kafka** to process high-throughput ad invoice transactions; improved reconciliation latency from 800ms to **190ms**, enabling faster media payment cycles.
- **Automated** Python-based ETL pipelines to ingest and normalize cross-platform campaign data into **PostgreSQL**, reducing manual QA steps by **2,300** per sprint while promoting upstream data consistency.
- **Refactored** legacy invoice-matching logic into a modular Python service integrated with **Redis** and **Celery**, cutting memory usage by **4.1 GB** per instance and slashing error resolution time by **3 hours/day**.
- **Orchestrated** deployment of containerized services with **Docker, Jenkins**, and **AWS ECS**, enabling automated blue-green releases that cut downtime during rollouts from 17 minutes to **under 2 minutes**.
- **Instrumented** detailed transaction-level telemetry using **Prometheus** and **Grafana**, enabling early detection of SLA violations and reducing escalations by **35 per quarter**.
- **Led** cross-functional architecture reviews to consolidate three legacy billing engines into a unified Java microservice, coordinating with product and DevOps teams to meet regulatory timelines across **2 global regions**.
- **Invented** an internal Python-based static analysis tool to detect invoice reconciliation anomalies pre-deployment, adopted by **3 peer teams**, cutting post-release bug reports by **41 tickets/month**.

- **Collaborated** with business analysts and client success managers to design schema extensions supporting **\$140M+** in annual media spend, translating client contracts into scalable, backend rule engines.
- **Deployed** containerized Java microservices on **AWS ECS Fargate** with **Application Load Balancers and auto-scaling policies**, enabling horizontal scaling under ad traffic surges up to **6,000 concurrent invoice events/second**.
- **Integrated AWS S3, Lambda, and Step Functions** to build a fault-tolerant batch-processing pipeline for monthly media spend reports, reducing manual intervention by **38 engineer-hours/month**.

Software Developer Intern

Jan 2019 – Jun 2019

AirBnb | India

- **Engineered** a modular, high-performance **React + TypeScript** front-end architecture for the redesigned booking flow, reducing page load time by **3.4 seconds** and increasing guest conversion by **12,400 bookings** in the first month.
- **Optimized** backend API endpoints using Kotlin and GraphQL, enabling batched queries that cut average response latency by **127 ms**, while collaborating cross-functionally to improve code maintainability.
- **Refactored** legacy monolithic service into microservices deployed on Kubernetes (EKS), improving service resilience and decreasing system downtime by **16 hours/month**, demonstrating proactive systems thinking.
- **Integrated** real-time logging and distributed tracing with Datadog and OpenTelemetry, which accelerated debugging cycles by **2.5x** during peak seasonal traffic, showing strong ownership over operational excellence.
- **Automated** A/B experimentation logic via Airbnb's internal experimentation platform, leading to **3 validated feature rollouts** within 6 weeks, while applying user empathy to ensure intuitive UX alignment.

EDUCATION

Master of Science in Computer Science

Aug 2023 – May 2025

Illinois Institute of Technology | Chicago, IL

Bachelor of Engineering in Computer Science

Jun 2015 - May 2019

Savitribai Phule Pune University | India

TECHNICAL SKILLS

Programming & Scripting: Java, Python, JavaScript, TypeScript, C++, C#, C, SQL, PHP

Web & Front-End Development: HTML5, CSS3, React.js, Node.js, Express.js, Vue.js, AngularJS, ASP.NET, ASP.NET MVC, ASP.NET Web API, ASP.NET AJAX, React Native, jQuery, jQuery UI, AJAX, Angular Material, Front-End Design, Front-End Coding, Mobile Web Design

Backend, Frameworks & Architecture: Spring Boot, Spring Framework, Spring MVC, Spring Security, Django, .NET Core, Hibernate, ORM, Maven, Object-Oriented Programming (OOP), Object Oriented Design, MVC Architecture, Design Patterns, Core Java, Programming, Web Development, Framework Design

Cloud, DevOps & Tools: Amazon Web Services (AWS), AWS Lambda, Amazon EC2, Amazon S3, Azure SQL, Docker, Kubernetes, Terraform, Ansible, Jenkins, GitHub, Git, Subversion (SVN), Visual Studio, Visual Studio Team System, Version Control, Open-Source Software, Continuous Integration (CI), Continuous Delivery (CD)

Databases, APIs & Testing: MySQL, MongoDB, PostgreSQL, Microsoft SQL Server, Redis, NoSQL, Elasticsearch, RESTful APIs, REST Architecture, Web Services API, GraphQL, JSON, XML, XML Schema, API Development, Unit Testing, JUnit, Test-Driven Development (TDD), Data Structures, Algorithms, Data Pipelines, Machine Learning, Apache Spark

PROJECTS

ChatGPT-Powered Resume Optimizer & Job Matcher

- Mapped a web-based tool using React.js, Node.js, and OpenAI GPT-4 API that analyzes resume content against job descriptions, generating aligned, role-specific bullet points and keyword enhancements across 3 resume sections.
- Orchestrated resume-job matching logic using TF-IDF scoring and cosine similarity, improving ATS alignment for over 150 uploaded resumes in testing mode, with real-time optimization suggestions.

GenAI Interview Assistant for Behavioral Questioning

- Constructed a conversational interface using Python, Streamlit, and ChatGPT API to simulate role-specific behavioral interviews, generating Interactive follow-up questions and supporting 30+ use cases across tech, data, and product roles.
- Operationalized a session scoring system using prompt chaining and LLM context tracking, providing structured feedback across 5 core behavioral areas: communication, decision ownership, cross-functional alignment, logic defect detection, and initiative.
