Summary

Senior Full Stack Engineer & Solution Architect with 10+ years of experience building secure, scalable .NET applications across healthcare and finance. Mastered C#, ASP.NET Core, Blazor, Azure, AWS, SQL Server, and microservices architecture. Strong in API design, DevOps, and delivering enterprise solutions in Agile environments

Experience

Ascension Health

Senior Full Stack Engineer & Team Lead

Apr 2021 – Jul 2025

- Migrated legacy **EMR** modules into **Azure Kubernetes Service (AKS)**-based **microservices** with **ASP.NET Core 6**, **EF Core**, and **Docker**, enabling reliable scaling during a 3x increase in telehealth visits.
- Redesigned the patient portal from **ASP.NET Web Forms/Kendo UI** to **Angular 14** with **RxJS** and **Figma**-driven UI, improving accessibility, simplifying navigation, and reducing bounce rates by 35%.
- Built **REST** and **FHIR APIs** in **ASP.NET Core** to integrate with **Epic** and **Cerner**, giving clinicians secure, real-time access to patient data across facilities.
- Implemented event-driven workflows with **Azure Service Bus** and **Azure Functions** to handle scheduling, billing, and notification processes, reducing integration errors by 30%.
- Optimized 150+ **SQL Server stored procedures** and **Entity Framework Core 6** queries, improving billing and patient record lookups by 60% and sustaining sub-200 ms response times under heavy load.
- Delivered an **AI**-driven triage assistant using **Python** and **Azure Cognitive Services**, automating 35% of initial patient assessments and reducing manual nurse intake during virtual visits.
- Designed **ETL** pipelines with **SSIS**, **Azure Synapse**, and **Data Factory** to unify patient, claims, and telehealth data, supporting advanced analytics for care management.
- Strengthened security with **OAuth2**, **Azure AD B2C (Entra ID)**, and **Key Vault**, simplifying authentication and protecting sensitive data across portals.
- Enhanced observability with Azure **Application Insights**, **DataDog**, and **Log Analytics**, reducing incident response times by 70%.
- Implemented automated testing (**xUnit**, **NUnit**, **Moq**) across services, raising coverage to 85% and reducing production defects by 40%.
- Updated **Azure DevOps** pipelines using **Terraform** to configure **Azure API Management** mapped to **Azure Function App** endpoints, automating API onboarding and streamlining integration work.
- Mentored 3 junior engineers through code reviews and test automation guidance, improving delivery quality and speeding up team onboarding.

Investnet Inc

Senior Software Engineer & Solution Architect

Mar 2018 – Mar 2021

- Orchestrated migration of legacy **.NET financial services** applications to **AWS ECS Fargate** using **SQS** and **API Gateway**; achieved 40% reduction in infrastructure costs and improved application scalability by 150% (**Microservices**)
- Modernized the client onboarding platform with **React 16**, **Next.js**, **ASP.NET Web API**, **Kafka** and **AWS API Gateway**, enhancing usability and reducing form abandonment by 25%
- Architected secure **RESTful** and **GraphQL** financial APIs using **ASP.NET Core**, **AWS Lambda**, and **Amazon Cognito** for credit scoring and payments, enabling flexible data access and third-party bureau integration
- Optimized transactional data pipelines using **SQL Server** on **Amazon RDS** and **SSIS**, reducing reporting latency by 70% and supporting high-volume batch processing
- Enhanced data protection by designing multi-factor authentication using **OAuth2**, **Amazon Cognito**, and **JWT**, earning the 'Top Security Advocate' award within the engineering department.
- Architected resilient **ETL** pipelines using **AWS Glue** and **SSIS**, processing 5TB of financial data daily into **Amazon Redshift** for risk management and fraud analytics, reducing errors by 35%.

- Designed and delivered data visualizations using **AWS QuickSight** and **SSRS** for internal risk, compliance, and operations reporting
- Integrated **CI/CD** pipelines using **AWS CodePipeline** and **CodeBuild**, with unit testing via **MSTest/Moq** and infrastructure automation using **CloudFormation** templates
- Integrated **Microsoft Dynamics 365 CRM** with internal platforms to enable real-time client data sync and enhance sales pipeline visibility
- Actively contributed to **Agile** planning and architectural decisions, defining **SDLC** practices, evaluating trade-offs, and documenting technical designs to align with business and regulatory goals

Modernizing Medicine, Inc

Full Stack Engineer

Jan 2016 – Feb 2018

- Constructed robust backend systems with **C#**, **Java**, and **ASP.NET Web Forms**, empowering seamless patient intake processes and resulting in zero data loss incidents for over 3,000 patients.
- Built internal desktop applications with **WPF**, improving scheduling accuracy and administrative staff productivity through responsive and streamlined UI components
- Configured **ADO.NET** data connections, optimizing **SQL Server** performance for **EMR** and claims data access; resolved 99% of data access issues within defined SLAs, boosting user satisfaction
- Enhanced UI features using **Blazor**, **Kendo UI**, and **jQuery**, creating responsive and user-friendly experiences for both staff and patient-facing portals
- Implemented messaging workflows with **RabbitMQ** to decouple services and enable asynchronous processing of appointment reminders and billing event notifications
- Leveraged **Redis** for caching frequently accessed clinical and billing data, reducing **SQL Server** load and improving response times for high-traffic workflows
- Contributed to **DevOps** activities using **TFS**, supporting deployments to **Azure App Services**, maintaining release scripts, and resolving integration issues to ensure environment stability

Accenture

Software Engineer

Sep 2014 – Dec 2015

- Developed web modules in **C#** and **ASP.NET MVC** to support dealer campaign management, lead capture, and vehicle promotion pages for a global automotive marketing portal
- Wrote **SQL queries** and assisted with stored procedures to generate regional sales reports and campaign performance metrics for client stakeholders
- Implemented front-end components using **JavaScript**, **HTML**, **CSS**, and **jQuery**, contributing to interactive dashboards and responsive campaign pages
- Participated in **code reviews**, **testing**, and **defect triage sessions**, helping ensure delivery quality across sprints and internal client demos
- Integrated **Elasticsearch** to enable fast, full-text search across vehicle listings and campaign data, improving user experience and dealer access to relevant marketing insights
- Collaborated with cross-functional teams including designers, QA, and marketing analysts to align technical implementation with campaign objectives and timelines

Education

University of Houston

Bachelor's degree in Computer Information System

2014

2010 -
