

Eric Howard

Lead Full Stack Engineer | Holiday, FL | (813)-214-5222
peakehoward@outlook.com | [linkedin.com/in/eric-h-938014347/](https://www.linkedin.com/in/eric-h-938014347/) | github.com/legioneh

Core Skills

- C#, Javascript, Typescript, Python, Node.js, HTML, CSS
- ASP.NET, .NET Core, MVC, Web API, Web Forms, Angular, React, Blazor, WPF, Bootstrap, Material UI
- T-SQL, MS SQL, Azure SQL, PostgreSQL, MySQL, AWS Dynamo DB, Azure Cosmos DB, Mongo DB, SSIS
- Azure, AWS
- Terraform, Docker, Kubernetes, Jenkins, Azure DevOps, GitHub Actions, AWS CodePipeline, Team City
- xUnit, NUnit, Cypress, Jenkins, WebDriver, Selenium, Postman, SonarQube
- Agile, Scrum, JIRA, Confluence, Trello
- Windows, Ubuntu, Visual Studio, VS Code

Professional Experience

Genesis HealthCare

Lead Full Stack Engineer

Kennett Square, PA

Apr 2023 – Jul 2025

- Directed the migration of legacy patient management systems to a microservices architecture using **.NET Core 7** and **Angular 15**, boosting scalability, reliability, and **HIPAA** compliance for skilled nursing and rehabilitation operations.
- Redesigned patient health records and care coordination dashboards in **Angular 15**, implementing modular components and real-time notifications; updated clinical page load times by 40% and improved care team access to vital reports by 25%.
- Architected a comprehensive **Microsoft SQL Server** database, implementing **ETL** pipelines with **SSIS**, advanced **T-SQL**, and **EF Core 7** for efficient access to patient and operational data.
- Established robust security protocols with **Azure Entra ID**, **OAuth 2.0**, and **JWT**, safeguarding **PHI** across applications and ensuring patient data privacy.
- Updated 30+ **RESTful APIs** for seamless interoperability with **Epic**, **Meditech**, and **eClinicalWorks**, ensuring **HL7/FHIR** standards compliance and improving data exchange for patient transfers and referrals.
- Integrated **Microsoft Dynamics 365 CRM** with patient management systems, automating appointment scheduling and follow-up communications; increased patient engagement by 35% and reduced missed appointments by 20% in long-term care facilities.
- Orchestrated **Azure** infrastructure, integrating **Entra ID**, **Azure API Gateway**, **Azure Functions**, **Logic Apps**, **Kubernetes Service**, **Service Bus**, and **Key Vault** to support scalable and secure healthcare applications.
- Implemented logging and monitoring solutions using **Grafana** dashboards, **OpenTelemetry** tracing, and **Istio metrics**, reducing incident response times by 40% and improving uptime for patient care systems.
- Automated **Azure API Management** deployment with **Terraform** in **Azure DevOps**, streamlining endpoint mapping and infrastructure provisioning with **YAML** scripts and **ARM** templates, resulting in a 50% reduction in deployment time.
- Established **CI/CD** pipelines in **Azure DevOps**, integrating **SonarQube** for code quality and **Cypress** for e2e testing, accelerating delivery and enhancing reliability of healthcare software releases.
- Collaborated with **AI** engineers to integrate **Azure AI** services into the **EHR** platform, enabling real-time patient risk stratification and clinical insights for post-acute care.
- Conducted code reviews and mentored 3 junior engineers, fostering a collaborative team culture and contributing to the growth and success of a 13-member development team.

BridgePay Network Solutions

Senior Software Engineer

Maitland, FL

Feb 2021 – Apr 2023

- Engineered microservices-based payment gateway architecture using **.NET Core** and **gRPC** for hospital and healthcare clients, enabling secure, high-throughput patient billing and automated insurance claims, which reduced payment reconciliation time by 35%.

- Optimized **SQL Server**, **PostgreSQL**, and **AWS DynamoDB** databases to support real-time transaction processing and reporting for healthcare payments, improving data integrity, scalability, and reducing financial discrepancies for hospital administrators.
- Built scalable **React** healthcare portals with real-time updates via **SignalR** and fast access to payment records using **DynamoDB**, improving financial transparency and patient payment experience by 25%.
- Led migration of healthcare payment systems to **AWS**, using **CloudWatch** for monitoring and **DynamoDB** for scalable storage, boosting reliability and ensuring **HIPAA** and **PCI DSS** compliance.
- Architected and deployed serverless payment workflows using **AWS Lambda**, enabling scalable, cost-effective transaction processing and reducing infrastructure management overhead.
- Integrated advanced fraud prevention modules using **Python** and **Node.js**, decreasing fraudulent activity by 20% and protecting hospital revenue and patient trust.
- Set up **CI/CD** pipelines with **AWS CodePipeline** and **GitHub Actions**, using **xUnit** and **Jest** for testing, speeding up billing feature deployments by 40% and improving code quality.

Tenerum Payment Gateway
Senior Software Engineer

Clearwater, FL
Sep 2018 – Feb 2021

- Engineered secure payment gateway solutions using **C#** and **.NET Core**, enabling **PCI DSS**-compliant transaction processing for healthcare and retail clients, resulting in a 30% reduction in payment fraud incidents.
- Designed serverless solutions on **Azure**, leveraging **Azure Functions** and **Service Bus** to achieve high availability and scalability for mission-critical payment workflows.
- Built and maintained merchant portals and payment interfaces using **Angular** and **TypeScript**, enhancing user experience and increasing client adoption rates by 25%.
- Integrated advanced tokenization and encryption modules, reducing the risk of data breaches and supporting seamless recurring billing for enterprise healthcare providers.
- Implemented 15+ **GraphQL** APIs for payment data aggregation and reporting, streamlining data access for merchant portals and improving query performance and flexibility for client integrations.
- Optimized database performance and security across **SQL Server** and **NoSQL** solutions, supporting real-time transaction analytics and reporting for financial reconciliation.

Trinisys, a Harmony Healthcare IT Company
Software Developer

Brentwood, TN
Mar 2015 – Aug 2018

- Developed and maintained healthcare data conversion and archival solutions using **ASP.NET MVC**, enabling hospitals and clinics to securely migrate and access legacy patient information during **EHR** transitions.
- Designed **RESTful APIs** and integration modules to facilitate seamless interoperability between legacy healthcare systems and modern **EHR** platforms, supporting **HL7** and **FHIR** standards for data exchange.
- Leveraged **Azure** cloud services for scalable deployment of archival and integration applications, reducing infrastructure costs for healthcare clients.
- Developed automated testing frameworks using **NUnit** and **Moq** for claims processing applications, increasing code coverage to 75%.
- Influenced technical support and troubleshooting for hospital IT teams during data migration and archival projects, ensuring successful project delivery and user satisfaction.

Education

B.S in Computer Science, Middle Tennessee State University

Aug 2010 – May 2014
