SKILLS

Terraform | JIRA, Confluence, Agile: Scrum. | Gov. cloud | Okta | Expert in CI/CD tools, Git hub. | Container Services. | Database skills. | IAC | Testing | Jenkins | Security skills | Automation skills | Daily Collaboration and communication. | Container orchestration tools (docker engine, Kubernetes).

EXPERIENCE

Tech-Hive Mar 2023 – Present

Solutions Architect

- Working with multiple project teams and clients to determine programming project specifications, work plans, quality assurance plans, and timelines for client projects.
- Produce design and architecture of Cloud security solution to meet the requirements.
- Designed and implemented an automated deployment pipeline using Docker, reducing deployment time by one hour and decreasing human error by 16%.
- Designed the information architecture and model of an organization's assets.
- • Kept up to date with latest industry knowledge and news to maintain and improve enterprise and business platforms.
- • Improved system monitoring and alerting, reducing response time to critical issues by 19%.
- Design of high quality architectures that meet customer requirements and are consistent with enterprise architectural standards.
- Communicated target architectural plans and company roadmaps across all departments.
- Utilize **AWS VPC**, subnets, routing, and VPC Gateways both via Console using **Terraform**.
- Managed user AD group membership using **Okta** push groups.
- Designed and edited blueprints for IT infrastructure and networking architecture according to management's demands.
- Established robust backup and disaster recovery procedures, reducing data recovery time by 24 hours and ensuring minimal data loss.
- Improved system monitoring and alerting, reducing response time to critical issues by 19%.
- I configure and manage **AWS network** and **security** services, such as **WAF**, **Shield**, Security Groups, **NACLs**, and **AWS Firewall Manager**.
- Monitored existing infrastructure and architectural frameworks for performance, and made changes and updates when necessary.
- Integrated Okta single sign-on (SSO) for enhanced authentication and access control, reducing unauthorized access incidents by 17%.
- Integrated with **Okta** to enable Single Sign-on and Multi-Factor Authentication.
- Strengthened data security measures, ensuring compliance with industry standards and reducing security incidents by 14%.

- For security purposes, I have orchestrated cloud governance, authorization, authentication, and identity access management using AWS **IAM** services (IAM users, **IAM** groups, **IAM** roles, **IAM** policies) Amazon guard duty, Amazon inspector, Aws cloud single sign-on, Aws config, Aws shield, Aws cloud trail, Aws Shield and AWS organization.
- I have extensive knowledge of AWS: **EC2**, ELB, auto-scaling, IAM Roles, **S3** Buckets, **CloudWatch** alerts, and **SNS** notifications.
- I have utilized disaster recovery to keep the environment up and running in case of any unexpected disaster.
- Performed data migration from on-premises environments into AWS.

Pyramid consulting (Contract)

July 2022- Jan 2023

AWS Cloud Engineer

- Advised and evaluated data retention and governance using cloud technologies.
- Creating, populating, and maintaining database objects as needed.
- Utilized Prometheus for real-time performance monitoring, resulting in an improvement in resource allocation and database efficiency.
- Strengthened data security measures, ensuring compliance with industry standards and reducing security incidents by 14%.
- Extensive experience with build automation and continuous integration/delivery ecosystem capabilities, such as **Terraform**, **Git**, **Docker**, etc.
- Integrated Okta single sign-on (SSO) for enhanced authentication and access control, reducing unauthorised access incidents by 17%.
- Deployed AWS infrastructure and resources using automation and pull requests including **Terraform**.
- I have automated infrastructure in Amazon Web Services with **Terraform** and **Ansible**.
- Experienced in infrastructure configuration and automation processes and tools: **Terraform**.
- I have experience in Setting up the build and deployment automation for **Terraform** scripts using **Jenkins**.
- Successfully managed deployment automation using **Packer-Docker** and **Terraform** to automate the system.
- Handled work from the initial stage of development to create branches, make developers follow standards create build scripts, and labelling, automate the build process, and deploy process by using the **Jenkins** plugin.
- I used **JIRA** as my ticket tracking, change management, and **Agile/SCRUM** tool.
- Diligently built, released, and managed configurations, continuous integration, and deployment methodology.
- I am experienced in installing, configuring, and maintaining cloud applications.
- Responsible for setting up **CICD** pipelines using **GitHub** actions.

Envicel Ltd- Jan 2019– May 2022

Devops Engineer

- I have strong knowledge of **data migration** (to public cloud) practices and technologies.
- I have created **solution designs** for client opportunities in one or more AWS Competencies or general cloud-managed services.
- Created a lift and shift process model clearly defining the individual steps of the lift and shift process.

- Experienced in developing infrastructure as code using **Terraform** combining third-party modules with client-specific code. Deployed the infrastructure in the Amazon cloud, debugged all issues, and wrote the deployment documentation.
- Installed and Implemented **Okta** Access Gateway for securing access to on-prem apps and protecting the organization's hybrid cloud infrastructure Integrated **Okta** SSO for more than 170 applications with MA enabled at **Okta** level and app level.
- I have set up MFA for all applications in scope to **Okta** such as **Okta** push, **Okta** verify, SMS authentication, voice call authentication, and security questions.
- Built networking infrastructure, **EKS** (Kubernetes) clusters, and relational databases in AWS as a code.
- I supervised the development team in designing/migrating AWS cloud-based solutions.
- I have utilized **Terraform** code for a Kubernetes infrastructure build. Managed it using Kops for **Kubernetes**. Debugged issues and integrated Kubernetes with **ECR** and Amazon **Route 53**.
- I created snapshots and Amazon machine images (**AMIs**) of the instances for backup and creating clone instances.
- Experienced with **Containerisation** and orchestration of web services.
- Developed infrastructure as a code using **Terraform** with a modular approach, deployed infrastructure in Amazon cloud, performed migration of on-premises resources into the cloud, and debugged all migration issues in the cloud.
- Experienced in building applications of various architecture styles like **Micro-services** architecture consisting of **Docker**.
- Provisioned AWS and Azure services and resources using **Terraform**: EC2, EBS, S3, VPC, Auto Scaling, Cloud Formation, Elastic Load Balancing, RDS, Route 53, Memcache, Redis, OpsWorks, **CloudWatch**, **CloudTrail**, Identity and Access Management (**IAM**).
- Devised and deployed a scalable, highly available, and fault tolerance system for Launching, monitoring, and terminating **EC2** instances based on the client's request.
- Utilized **Lambda** services for automating tasks on AWS Cloud.
- Worked with distributed teams to design and develop frameworks, solution accelerators, proofs of concept, and external customer-facing products.
- Designed, both technically compliant and secure Cloud solutions, as well as value-based, on-demand services to facilitate the effective transition and migration of projects and programs into unique and adaptive cloud environments to support the business development lifecycle.

EDUCATION:

- Bachelor's, Lagos State University

CERTIFICATIONS AND TRAINING:

- **AWS Certified:** Solutions Architect, Professional
