

Inderjeet Yadav

15161, Rosario Rd, Frisco, TX, 75035

Tel: 720-227-4011, Email: inderjeetrao@gmail.com

Professional Summary:

- Cloud solutions architect with hands-on experience in Architecting and deploying enterprisewide scalable solution in Amazon Web Service public cloud
 - Expertise in AWS compute, cloud networking & security services
 - Deep understanding and hands-on experience migrating on-prem systems to the AWS cloud
 - In-depth understanding of Micro-services and PaaS services – Lambda, Azure Function, Cloud Function, ElasticBeansTalk, App Engine, Web App, API Gateway, DynamoDB
 - Automation of code deployment using AWS CI/CD pipeline – Code commit, code build, and code deploy on EC2, ASG, and Elastic Beanstalk environment
 - Experienced in AWS monitoring tools, analyzing performance metrics and troubleshooting using Cloudwatch, Cloudtrail, X-Ray, VPC Flow logs, ELB access logs etc
 - Hands-on experience on AWS CloudFormation & Terraform to design, deploy and manage infrastructure as code
 - In depth understanding of AWS micro-services – ECS, Lambda, API Gateway, DynamoDB
 - Experienced in Service Delivery, Vendor Management & contractor relationships
 - Strong interpersonal skills in dealing with Clients.
 - Ability to analyze complex problems and develop effective solutions.
-

TECHNICAL SKILL

- Cloud Networking and Security – VPC, VNet, Peering, Transit Gateway, Direct Connect/VPN, NACL's, Security Groups, WAF, Firewall manager, Secret Manager, GuardDuty, Inspector, KMS, Cloud HSM, NAT Gateway, Cloud NAT, Cloud VPN, Interconnect, ExpressRoute, VNet peering & Load balancers, Cloud Front, Application Gateway, Route53, Cloud DNS, Azure DNS, Auto Scaling Group, Instance Group, Scale set
- AWS Cloud Migration – Snowball family, SMS, DMS, DataSync, AGN, Discovery agents
- AWS Compute, Storage service – EC2, ECS, Image Builder, EFS, Glacier, Storage Gateway
- AWS Databases – RDS, Aurora, DynamoDB, Microsoft SQL
- User management & Compliance- AWS IAM, Policies & Roles, Cognito, AWS SSO, ACM, Directory Services, Artifacts, OKTA

- DevOps Tools – Code commit, GitHub, CloudFormation, Terraform
 - Operating Systems – Windows and Linux
 - Routing and switching on cisco product – ISR routes, Nexus and Catalyst switches ▪ Cisco Firewall – ASA product line
 - Cisco Unified convergence platform – UCS, Fabric Interconnect
 - VM Ware tools – vCenter, vSphere Client, ESXi 5.1, vMotions, HA, DRS
 - vBlock Platform – vBlock 300 & 700 series
-

CERTIFICATIONS

- AWS Solutions Architect Professional
 - AWS Certified Security – Specialty
 - AWS Certified Advanced Networking - Specialty
 - AWS Certified Developer - Associate
 - AWS Certified Solutions Architect – Associate
 - AWS Certified SysOps Administrator – Associate
 - AZ-300 Microsoft Azure Architect Technologies
 - Azure Fundamental
 - Trained on Google Cloud Platform
-

PROFESSIONAL EXPERIENCE :

CGI

Jan 2020 – Present

Directory Consulting Expert – AWS Cloud

- Designed and implemented complex hybrid network architectures using AWS Transit Gateway, Direct Connect, Site-to-Site VPN, multi-VPC mesh, and decentralized hub-and-spoke models.
- Led large-scale on-prem to AWS migrations leveraging AWS Application Migration Service (MGN), including agent installation, continuous replication, test launches, cutovers, and EC2 right-sizing across a multi-account environment; also executed big-data migrations using AWS Snowball, asynchronous transfer workflows, and legacy operating system modernization.

- Built and operationalized EC2 Image Builder pipelines to deliver standardized, secure Golden AMIs with current OS, security, and monitoring configurations, improving patching automation and ensuring compliance with enterprise security controls.
- Collaborated with DevOps teams to enhance source control and CI/CD pipelines, implementing Blue/Green deployments and automated releases using AWS native services including CodeCommit, CodeBuild, and CodeDeploy.
- Built multi-account AWS landing zones with centralized networking, governance, and security controls using AWS Control Tower, Organizations, and Shared Services VPCs.
- Led the cloud financial governance and optimization strategy across multi-account AWS environments, improving cost efficiency and resource utilization by implementing FinOps best practices.
- Assist new clients with AWS cloud migration, data lifecycle management, compliance, disaster recovery, and manage operational challenges.
- Creating requirement understanding document, design solution and create Architectural Solution Design and Low-Level Design documents.
- Ensuring solutions are optimized for performance, scalability, and cost-effectiveness.
- Creating Service Control Policies, GuardRails, IAM policy and setting Permission boundaries to enforce security policy globally.
- Collaborated with Service Delivery Managers and DevOps teams to identify right-sizing and savings opportunities, leveraging Savings Plans, RIs, and spot instances.
- Providing guidance and mentorship to development and engineering teams on AWS-related topics.
- Implementing security best practices and ensuring solutions comply with relevant industry and organizational security standards.
- Educate Delivery and operations team on the Responsible Use of Cloud.
- Conduct Cloud Risk Assessment and Data Privacy Security Checklist for the new project.
- Assist business engineering team with RFP responses.

Cognizant Technology Solutions

Dec 2013 – Jan 2020

Infra Architect

- Design and Implement AWS cloud based solutions in Hybrid data center
- Setting up cloud connectivity using VPC, Direct connect, transit gateway, VPC peering and security control using Security Groups and Network ACLs

- Designing the highly available and scalable solutions with Elastic load balancer, Auto-scaling groups ,EC2 instances and Route-53
- Defining Roles, Policies and User Management in AWS Identity Access Management
- Monitoring and troubleshooting of cloud environment using Cloud Watch, VPC Flow logs, S3 access logs etc
- Taking periodic backup and snapshots of EBS volumes and databases
- Periodic review of security practices and cost optimization in aws cloud
- Designed and coordinated build-out efforts of a newly deployed Data Center, which leveraged highly resilient fault-tolerant infrastructural technologies, ensuring maximum system uptime for production systems
- Analyzed business needs, network traffic patterns, system capacity, and service options in order to design more robust network architectures
- Lead global efforts in the design, implementation, and support of server and network infrastructure build-out initiatives
- Responsible for smooth functioning of network in large scale enterprise data centers, corporate offices and remote sites
- Review, design the network solutions for new site turn-ups, major network or technology changes in data centers and other sites
- Install, configure, test and troubleshooting of routers, switches and load balancers
- Review the change template submitted by team and presenting to change control board
- Completely redesign the wireless solution for client that includes upgrading WLC, WAPs and adding new functionalities of Prime, MSE and ISE
- Handle all kinds of operational issues, escalations and problems, driving towards solutions and key communication to client
- Prepare the decks and present for weekly, monthly and business review meeting with clients
- Periodic review with team on link utilization, capacity planning, monitoring and daily backup of network devices.
- Upgrading, patching & mitigating vulnerabilities on network devices irrespective of the vendor/technologies
- Reporting (Weekly, Monthly) on health checks, capacity & services.
- Service improvement plans, device migration to centralized management
- Documentation of KBs, SOPs, network diagrams rack elevation diagram, cabling documents and other infrastructure details
- Score Cards and Periodic performance review to provide feedback and assist associate to achieve their career aspiration

- People's periodic rewards and recommendations including promotions and salary revisions
- Baseline the resource requirements and set module/component/phase goals and approve project plans and define project timelines, milestones
- Responsible for keeping balance between project scope, time, and budget
- Work towards customer expectation and ensure highest satisfaction of services committed

EMC²

July 2013 – Nov 2013

vBlock Platform Support Engineer

- Worked as vBlock Platform Support Engineer in VCE
- Provided support to VCE customers over UCS, N1Kv, 5K & VMware related issues
- Escalation & co-ordination with other vPSEs and parent company's support engineer if needed
- Pro-actively follow-up with customer until the issue is resolved to customer satisfaction
- Preparation of knowledge base article on UCS technologies

HCL Comnet S & S Ltd.

Dec 2007 – July 2013

Track Lead

- Provided support on Cisco UCS deployed in five Data Centers worldwide
- Creation and management of VMs using OVAs on ESXi host running on UCS blade using VM ware vSphere, vCenter
- Installation and configuration of Cisco Unified Computing system using UCS manager 2.0
- Implementation of QoS on network backbone for proper treatment of VoIP traffic
- Turn-up of new sites and migration of existing sites on CUCM
- Managing offshore team to support 24x7 operation
- Prepare shift roster and make arrangements in case of emergency off situations
- Ensure proper handling of tickets to meet SLA & avoid escalations.
- Assign and track of Incidents/changes to team members to load balance the work.
- Preparation of reports and presentations for Client and Management

- Installation and configuration of Cisco Unified Computing System
- Creation and management of virtual machines. Bare metal install on UCS
- Installation and configuration of ESXi hosts, configuring networking and managing vCenter
- Configuration and troubleshooting of cisco voice gateways using SIP and H.323
- Segregated and implemented QoS for data and voip traffic on backbone
- Coordinated migration of Europe wide retail shops and warehouse network to MPLS (by Easynet)
- Network Monitoring, configuration & troubleshooting
- Handled migration of more than 50 backbone sites from ISDN backup to 3G
- Defining roles & responsibility of team member according to severity of incident
- Configuration & troubleshooting SIP and H.323 gateways (Voice CKTs, dial plan, translation pattern, DSP requirement) between US, UK POP to all HCL delivery centers in India
- Management of cisco call manager and voice mail solution ▪ Requirement understanding sessions with team and client.
- Preparing network connectivity proposal for new global customers of HCL to establish end to end connectivity from client site to HCL offshore support center
- Configuring cisco routers & switches, to implement the approved design & providing support in case of escalation from Operations team

CMC Ltd.

Network Engineer

June 2006 – Dec 2007

- Network Planning & project Implementation
 - Installation of Cisco Call manager and audio/video endpoints like 7911, 7912 and 7985G
 - Installation and configuration of cisco unity and meeting place server
 - Configuration and administration of Cisco ASA 5510 with SSM K9 Module
 - Installation & configuration of Cisco Access Control Server
 - Configuration of Enterasys, Cisco L2/L3 switch including 2650,3700&6500 series switches
 - Managed SMF/MMG optical fiber connectivity with 1& 10 Gbps modules to provide connectivity among all departments in Banaras Hindu University
 - Identifying Fiber cut and restoring connectivity with Splicing machine
-

EDUCATION

S.N.	Education	Education Body
1	B.Tech (ECE)	YMCA, Faridabad. Aff. To M.D University
