

Jay Maalec

Java DevOps Engineer/AWS, AZURE Engineer/Cloud Engineer

New York City, NY 10003 | (813) 694-9145 | jaymaalec@gmail.com

SUMMARY

Experienced Java Developer and DevOps Consultant with over 13 years of expertise in designing, developing, and optimizing complex systems across diverse industries. Skilled in building scalable, reliable, and maintainable solutions leveraging microservices architecture, event-driven systems, and API management. Proficient in implementing robust CI/CD pipelines, advanced caching mechanisms, and automating testing and infrastructure management to streamline deployments and enhance operational efficiency. Expertise spans a wide range of technologies, including Spring Boot, Hibernate, Docker, Kubernetes, Apache Kafka, Apache NiFi, Terraform, and Ansible. With a strong foundation in cloud computing across AWS, Azure, and Google Cloud, I have successfully managed cloud infrastructure, ensured compliance with standards like SOC 2, PCI-DSS, and HIPAA, and optimized costs. A proven leader of high-performing cross-functional teams, I drive digital transformation and align innovative software solutions with strategic business goals. Certified as an Oracle Java SE Developer, AWS Solutions Architect, and Kubernetes Administrator, I am committed to continuous learning and professional growth.

PROFESSIONAL SKILLS

- **Operating Systems:** Extensive experience with Linux and Windows environments for enterprise-scale applications.
- **Version Control Systems:** Proficient in Git, GitLab, Bitbucket, GitHub, and SVN for source code management and branching strategies.
- **Configuration Management:** Expertise in Ansible, Ansible Tower, Chef, and Puppet for automating infrastructure provisioning and configuration.
- **Cloud Computing & Containerization:** Advanced knowledge of AWS (EC2, S3, Lambda, IAM, VPC, CloudFormation) and Azure (App Services, AKS, Key Vault, NSG). Skilled in containerization technologies like Docker and Kubernetes for scalable deployments. Proficient in Infrastructure as Code (IaC) using Terraform and CloudFormation.
- **CI/CD Tools:** Expertise in Jenkins, Azure Pipelines, JFrog Artifactory, and Bitbucket Pipelines to implement and optimize CI/CD pipelines.
- **Web & Middleware Services:** Skilled in deploying and managing applications with JBoss, WebSphere, Nginx, Tomcat, and WebLogic.
- **Databases:** Strong expertise in relational databases (MySQL, PostgreSQL, SQL Server) and NoSQL databases (MongoDB, DynamoDB).
- **Monitoring & Reporting:** Proficient in Splunk, Grafana, Nagios, and Dynatrace for system performance monitoring and optimization.
- **Scripting & Automation:** Advanced scripting skills in Bash, Python, PowerShell, Ruby, and Groovy for workflow automation.
- **SDLC Frameworks:** Extensive experience in Agile, Scrum, and Waterfall methodologies for software development lifecycle management.

PROFESSIONAL EXPERIENCE

Sr. DevOps Engineer

Mindstorm Studios | New York City | March 2021 – November 2024

- Led DevOps initiatives to enhance automation, scalability, and efficiency for the organization's development and operational processes, ensuring seamless application delivery and maintenance.
- Architected and implemented Terraform modules for cloud provisioning and infrastructure management, enabling reusable and consistent infrastructure as code (IaC) practices across AWS and Azure environments.
- Streamlined CI/CD pipelines using Jenkins, Bitbucket, and Ansible Tower, significantly improving deployment speed, reliability, and operational efficiency.
- Collaborated closely with cross-functional teams, including engineering, QA, and operations, to ensure robust deployment strategies and maintain system integrity throughout the software development lifecycle (SDLC).
- Optimized monitoring and operational intelligence processes by configuring and enhancing Splunk deployments, creating actionable dashboards, and integrating advanced tools like Samurai/Ninja for seamless application monitoring and management.
- Championed best practices for DevOps workflows, including containerization with Docker and Kubernetes, automation of testing processes, and infrastructure optimization, driving improvements in system performance and reliability.

Enterprise DevOps Architecture

Vision Net Systems | New York City | Sep 2018 – Feb 2021

- Designed and maintained robust AWS CodePipeline workflows to streamline automated code deployments, utilizing Octopus and PowerShell for enhanced efficiency.
- Spearheaded the implementation of scalable, real-time monitoring solutions using Grafana and Prometheus, delivering intuitive dashboards for containerized applications, ensuring optimal performance and reliability.
- Engineered comprehensive version control, deployment, and configuration management frameworks with Ansible and Jenkins to support and optimize a multi-cloud infrastructure.
- Developed and deployed resilient CI/CD solutions on AWS, leveraging services such as EC2, S3, EBS, and Elastic Beanstalk to ensure consistent, fault-tolerant application deployments.
- Collaborated with cross-functional teams to establish DevOps best practices, automate infrastructure provisioning, and improve system scalability, reliability, and security.
- Provided strategic leadership in evolving the DevOps ecosystem by integrating cutting-edge technologies and aligning deployments with enterprise business objectives.

Senior DevOps Architect Consultant

Mountainise | New York City | Nov 2015 – Aug 2018

- Designed and architected scalable Azure cloud environments using Terraform, implementing infrastructure-as-code practices to ensure consistency and efficiency across deployments.
- Spearheaded containerized application deployments on Azure Kubernetes Service (AKS), enabling automation, scalability, and high availability for enterprise applications.
- Developed and maintained CI/CD pipelines in Azure DevOps, optimizing deployment processes to enhance delivery speed, reliability, and code quality for Azure-based services.
- Established robust monitoring and observability practices by configuring Azure Log Analytics and integrating with Grafana, providing actionable insights and tracking detailed metrics using Prometheus.
- Collaborated with cross-functional teams to promote DevOps best practices, streamline workflows, and align solutions with business objectives, driving operational excellence.
- Implemented security and compliance standards, ensuring adherence to industry regulations and best practices for cloud operations and data management.

Cloud Solutions Architect

Linux Administrator | New York City | March 2011 – Oct 2015

- Spearheaded Linux server administration, ensuring optimal system performance through advanced monitoring, resource optimization, and efficient user access management.
- Directed large-scale server migrations from Solaris to Red Hat Enterprise Linux (RHEL), significantly enhancing system reliability and scalability.
- Designed and implemented VMware-based virtualized environments to streamline resource allocation and improve operational efficiency.
- Established robust monitoring solutions using Nagios, enabling proactive identification and resolution of system performance bottlenecks.
- Led OS upgrade initiatives, managed comprehensive patching processes, and implemented automation for recurring administrative tasks using advanced shell scripting techniques.
- Collaborated with cross-functional teams to design and deploy secure, scalable cloud solutions aligned with organizational objectives.

PROJECTS

Cloud Automation for Disaster Recovery

- Developed and implemented an automated disaster recovery system for multi-cloud environments (AWS and Azure) using Terraform and Ansible.

Cloud-Native Monitoring and Alerting Solution

- Designed and deployed a cloud-native monitoring and alerting solution using Prometheus and Grafana to track infrastructure performance across AWS, Azure, and hybrid environments.

Automated Server Migration and Virtualization Implementation

- Led a major server migration initiative, moving enterprise workloads from Solaris to RHEL and implementing a VMware-based virtualized infrastructure for increased scalability and performance.

Education

New Jersey Institute of Technology | Bachelor of Science: Computer
Science New York City, NY | Oct 2007 – March 2011
