

Jesse Stroster

Holt, MI | stroster.jesse@gmail.com | 248.686.6636 | [LinkedIn URL](#)

Professional Summary: Software Developer with hands-on experience in full-stack .NET development, automation testing, and UI/UX design. Proven ability to solve real-world problems through secure, scalable applications and efficient code practices. Strong communicator and quality oriented with a passion for clean architecture and continuous improvement of systems.

EDUCATION

Michigan State University

Bachelor of Science, Computer Science

East Lansing, MI

May 2022

DTMB

Software Developer – Programmer Analyst 1

Lansing, MI

July 2022 – January 2025

- Developed and maintained .NET applications using modern architecture and clean code practices, reducing new bugs and regressions by 30%
- Optimized MOECS report pages for performance, cutting page load times by over 60%
- Designed and deployed *MOECSResources*, an automated test data tool that significantly improved QA efficiency by eliminating tedious manual setup steps
- Integrated Cypress automated testing with real-time email alerts, increasing regression test coverage in Certification and Permit areas by 50%
- Proactively remediated vulnerabilities, including cross-site scripting and SQL injection attacks, reducing risk of data breaches and ensuring compliance
- Collaborated closely with business analysts and project managers, improving alignment with user requirements and increasing client satisfaction

Technical Skills:

Languages & Frameworks:

C++, C#, .NET (Core, MVC, WebForms, WinForms), Python, Java, JavaScript, HTML5, SQL (SQL Server, MySQL)

Tools & Platforms:

Visual Studio, SSMS, Postman, Swagger, Azure DevOps, Git, TFS, Coverity

Testing & Automation:

Cypress, Unit Testing, End-to-End Testing, Code Reviews

Security & Maintenance:

Secure Coding, XSS/SQL Injection Remediation, Vulnerability Mitigation

Development Practices:

Agile SDLC, Requirements Gathering, Debugging, CI/CD, API Integration (RESTful)

Projects

Michigan Online Educator Certification System

- Developed and maintained a critical web application enabling educators to view and apply for teaching certifications and permits.
- Utilized ASP.NET and SQL Server to create a stable backend and an intuitive frontend interface.
- Conducted thorough testing and debugging to ensure the system's reliability and stability.
- Collaborated in code reviews and Sprint Retrospectives to refine team workflows and enhance development quality.

MOECSResources

- Designed and implemented a specialized testing application to manage test data and streamline processes, such as applying for certifications and permits.
- Simplified workflows for users by enabling efficient handling of test scores and related data.
- Improved operational efficiency and reduced manual processing times for administrative tasks.

Cypress Automated Testing Integration

- Developed and integrated end-to-end Cypress testing into a build server, enabling automated issue detection during development cycles.
- Configured email notifications to alert quality assurance teams immediately when tests fail, streamlining issue resolution.
- Enhanced overall application reliability and accelerated the testing process.

Stock Market Application

- Designed and implemented a dynamic Blazor web application to display historical intraday stock data using candlestick chart visualizations.
- Consumed the Alpha Vantage Intraday API, applying RESTful principles for efficient HTTP request handling and data retrieval.
- Utilized Postman for testing and validating API requests and responses during development.
- Built a responsive UI with interactive charting to allow users to analyze stock trends over customizable time intervals.
- Implemented error handling, data parsing, and caching mechanisms to ensure stable performance and adherence to API rate limits.
- Demonstrated skills in RESTful API integration, data visualization, and modern component-based web development.

Cake Shop

- Developed a dynamic commercial website featuring a homepage, detailed cake menu, about us section, and contact page.
- Implemented ASP.NET Core MVC with an N-Tier enterprise architecture to enhance modularity, maintainability, and scalability.
- Designed an intuitive and visually engaging user interface to highlight cakes, enhancing product appeal and customer engagement.

Remote Energy Distribution Payment Platform

- Built a collaborative software system to manage energy sales and payments for near and off-grid households.
- Integrated an SMS and voice payment system with an Arduino-based charging station to automate account credits.
- Provided a secure and reliable platform to distribute sustainable energy to suburban areas.

Point of Sales System

- Developed a C# GUI application capable of purchasing items, updating inventory, and generating customer bills.
- Leveraged a WinForms frontend to interact with a MySQL database of grocery store inventory.
- Optimized usability by benchmarking frequently purchased items, increasing customer satisfaction and sales efficiency.
