

Work Experience

Modivcare

7/2023 – 8/2025

Staff Software Engineer, Solutions Architect

Technology: C#, .NET 6, Java, Python, OpenAI, Angular, React, Node.js, Azure, Kafka, SQL, ETL, Microservices

- Migrated a legacy **ASP.NET MVC** based **EMR** system to microservices using **ASP.NET Core**, **Typescript** and **Angular** on **Azure**, modernizing patient scheduling and clinical record workflows.
- Architected a **HIPAA**-compliant telemedicine platform using **ASP.NET Core**, **SignalR**, and **OpenAI** integration, enabling secure real-time consultations and messaging.
- Engineered event-driven microservices using **Apache Kafka** for intake processing, claims, and eligibility verification—scaling to over 800K transactions.
- Developed reusable **UI** components using **Blazor**, **Angular**, and **Kendo UI** for scheduling, provider availability, and intake workflows, leveraging **RxJS** for state management.
- Designed a **Microsoft SQL Server** database and **ETL** pipeline using **SSIS**, optimized **T-SQL** and stored procedures, and improved data access performance with **Entity Framework Core 7**.
- Implemented unit and integration tests using **xUnit** and **Moq** for **.NET** and **Jasmine/Karma** for **Angular**, increasing test coverage and reducing production defects.
- Automated **Azure API Management** deployments with **Terraform** and **Azure DevOps**, optimizing **Function App** mappings with **YAML** and **ARM** templates and reducing deployment time by 50%.
- Automated the migration of clinical and operational data from **Dynamics CRM** and **SharePoint** to **Azure Blob Storage** using **Logic Apps** and **Azure Functions**, ensuring compliance with retention and audit policies.
- Enabled observability and distributed logging with **Serilog**, **Azure Application Insights**, **Prometheus**, and **Grafana**, providing proactive monitoring and workflow anomaly detection.
- Automated **CI/CD** pipelines using **Azure DevOps**, **YAML** templates, **Docker**, and **Bicep**, delivering containerized microservices with promotion gates and zero-downtime production releases.
- Conducted code reviews and mentored three junior developers, fostering a collaborative culture and contributing to the growth and success of a seven-member development team.

RTS Labs

7/2018 – 7/2023

Lead Full Stack Engineer

Technology: C#, .NET 6, WPF, MVC, Xamarin, Java, Spring, Node.js, Typescript, Angular, NgRx, React, Redux, Azure, AWS, XUnit, NUnit, MoQ

- Enhanced enterprise investment management systems using **C#**, **ASP.NET Core**, **Angular**, **Node.js**, **TypeScript**, and **AWS**, collaborating with cross-functional client teams to deliver scalable, secure, and data-driven digital solutions.
- Converted on-premise investment management platforms into **AWS** cloud-native systems using **ASP.NET Core**, **AWS DynamoDB**, **Lambda Functions**, **RabbitMQ**, and **Kubernetes**, increasing reliability, maintainability, and release velocity.
- Designed modern, scalable architectures using **Next.js**, **React**, and **Node.js**, producing high-performance, responsive **UI** components optimized for consulting clients' user experience and accessibility requirements.
- Conducted **A/B** testing and personalization for **React** front-end applications using **Jest**, **Mocha**, **Monetate** and **Adobe Target**, improving client engagement.
- Employed **Datadog** for real-time monitoring, tracing, and diagnostics across 10+ **ASP.NET Core** and **Node.js** projects, enabling proactive issue detection and ensuring platform stability for multiple client environments.
- Focused on performance tuning and caching optimization using **Elasticsearch** and **Redis**, complemented by comprehensive testing strategies to guarantee application speed, reliability, and scalability under production load.

- Migrated the policy issuing system from **WPF** to **ASP.NET MVC**, maintaining automation testing scripts and frameworks with **Selenium** and **NUnit**, reducing critical defects by 15% while improving deployment efficiency.
- Delivered **AWS**-based solutions using **EC2, S3, Lambda, RDS, DynamoDB, CloudFront, CloudFormation**, and **Elasticsearch**, architecting multi-cloud integrations tailored to client infrastructure and cost-optimization needs.
- Integrated **Microsoft Dynamics 365** to streamline **CRM** processes, automate operations, and empower clients with actionable, data-driven insights that informed strategic business decisions.

Microsoft Software Engineer

7/2014 – 7/2018

Technology: C++, **C#**, **.NET Core**, **IIS**, **Azure AD**, **Cosmos DB (NoSQL)**, **SQL Server**, **ADO.NET**, **Entity Framework**, **Git**, **REST**, **Application Insights**, **Kusto/KQL**, **Agile**, **TDD**

- Built **greenfield/ground-up services** for Project Orion (Identity) and Project Atlas (Insights) using **C++**, **ASP.NET Web API** and **.NET Core**, deploying to **IIS** and **Azure App Service**.
- Modernized 8+ legacy Microsoft applications by migrating **WCF/MVC5** endpoints to **REST APIs**, improving response times by **40%** and simplifying **API** maintenance.
- Designed and optimized **Cosmos DB (NoSQL)** and **SQL Server** schemas, tuning queries, indexes, and stored procedures to improve data performance and scalability.
- Implemented secure identity flows using **Azure AD**, **OAuth2**, and **MSAL**, enabling seamless authentication for **.NET** and **Angular** applications across internal tools.
- Developed distributed background workflows using **Azure Service Bus**, **WebJobs**, and **Azure Functions**, improving throughput and reducing processing backlog during peak load.
- Automated **CI/CD** with **Azure DevOps (VSTS)**, **Git**, build pipelines, deployment gates, and added telemetry dashboards with **Application Insights** + **Kusto** for end-to-end monitoring.

Technologies and Languages

- Languages: C#, Java, Node.js, JavaScript, Typescript, Python, OpenAI, LLama
- Frameworks: ASP.NET Core, WPF, Blazor, Web Assembly, Xamarin, Spring, Django
- DB: MS SQL, PostgreSQL, Oracle, MongoDB, DynamoDB, Cosmos DB, Redis
- Cloud: Azure, AWS
- Azure: Service Bus, App Service, Kubernetes, CI/CD, DevOps, Functions, Logic Apps, Enterprise Apps, Event Grid, Key Vault, API Management
- AWS: EC2, S3, API Gateway, Lambda, CloudWatch, CloudFormation, ETL, IAM, VPC
- Frontend: React, Angular, Vue.js, Next.js, JavaScript, HTML, CSS, SASS, jQuery, Bootstrap, Material UI, Tailwind CSS
- Testing: NUnit, XUnit, MSTest, Moq
- Other: JIRA, Trello, Kanban, Agile/Scrum, Kafka

Education and Certifications

Virginia Commonwealth University

Bachelor's degree, Computer Science

2010 – 2014

Microsoft Certified: Azure Fundamentals

2021
