

JONATHAN STEVENSON

Senior Full Stack .NET Developer | Microservices & Azure Expert | Financial & Healthcare Systems

New Franklin, OH 44319 | (925) 621-0636 | jstevenson.architect@gmail.com | [LinkedIn-Profile](#)

ABOUT

Senior Full-Stack .NET Developer with 12+ years of experience designing and deploying reliable applications optimized for cloud environments across finance, healthcare, logistics, and cryptocurrency sectors. Proficient in building secure, high-performance systems using C#, ASP.NET Core, Entity Framework, Azure, SQL Server, microservices, and modern JavaScript frameworks like React and Angular. Managed diverse a team of developers and analysts on complex projects including HIPAA-compliant telehealth platforms and global fintech applications—achieving outcomes such as 270% client revenue growth and 30% infrastructure cost savings. Experienced in supporting engineers, refactoring aging platforms, and managing end-to-end software delivery in Agile environments.

EXPERIENCE

Senior Software Engineer at ATH Infosystems, North Canton, OH

July 2022 – Present

- Engineered the backend of a transport management system, using ASP.NET Core, Entity Framework, and REST APIs, enabling real-time driver tracking via a companion mobile app, automated invoicing, and centralized management of customer, shipper, and consignee data for logistics companies.
- Designed cross-platform mobile and web applications for a regional Pharmacy provider using Python, React, Typescript, HTML5, and CSS, enabling users to book and pay for CNG and PNG drug deliveries online, streamlining order processing and reducing dependency on Pharmacy app through seamless digital self-service.
- Built scalable backend services using Python, implementing RESTful APIs, Redis caching, Azure Blob Storage, and queue-based messaging patterns, while integrating Stripe payment processing for secure transactions, subscription management, and webhook-driven event handling in high-availability distributed systems.
- Directed the backend development for a full-featured telemedicine platform using ASP.NET Core, SignalR, and Twilio, delivering real-time video/voice/chat appointments, integrated e-prescribing, insurance claims, and payment processing—contributing to a 270% increase in client revenue and accelerated healthcare workflows.
- Integrated Azure DevOps CI/CD pipelines to automate deployment and testing workflows, reducing release times by 60% and improving deployment reliability.
- Collaborated with product managers and QA teams to define technical requirements and acceptance criteria, significantly reducing misalignment and post-release issues.

Senior Full Stack Developer at Castle Harlan, New York, NY

July 2021 – June 2022

- Built a dependable, tailored CRM system for a leading insurance firm using ASP.NET Core, SQL Server, and Asterisk, enabling full sales cycle automation, contact management, third-party bank and mobile app integrations, and advanced call-center capabilities—resulting in 35% business growth and 100% compliance with the defined testing roadmap.
- Established a cloud banking system on AWS, leveraging EC2, Lambda, and RDS to support rapid wage access, virtual card issuance, and protected account management while integrating open banking APIs (Maplerads BaaS) and third-party services to deliver an end-to-end fintech platform within six months for the Nigerian market.
- Developed an administrative dashboard using Node.js and Express, integrating MongoDB for document-based data management, implementing SSO (Single Sign-On) for secure role-based access control, and leveraging Redis caching to optimize session management and enhance real-time performance.

- Created a responsive financial trading dashboard with Angular, leveraging WebSocket technologies for real-time market data integration, integrating Stripe payment processing for secure deposits and subscription-based trading features, and implementing resilient error handling to maintain high system reliability. Developed high-performance SQL data solutions using Entity Framework Core, Azure SQL, and Redis, optimizing data access patterns and implementing high-efficiency caching strategies.
- Mentored a team of 6 developers in Agile environments, elevating code quality and performance through specialized practices in React optimization, C# architecture, and TypeScript standards.
- Applied software design principles and clean architecture patterns while collaborating via Git-based version control, participating in code reviews, testing cycles, and cross-functional Agile delivery.

Lead .NET Developer at The Merriman, Akron, OH

June 2017 – June 2021

- Coached a 9-member offshore team in the development of a healthcare coverage management application, leading the implementation of automated eligibility screening, real-time alerts, centralized data storage, and embedded reporting using .NET Core, Azure, and agile Scrum practices.
- Introduced a detailed microservices strategy using .NET Core 2.2 and Kubernetes for a telehealth platform with web and Android apps, enabling robust video consultations, e-prescriptions, and in-app payments, achieving 99.99% uptime and reducing deployment complexity by 40%, supporting future growth with flexible architecture.
- Constructed a sensitive healthcare dashboard processing 500+ daily medical interactions, utilizing React Hooks and Redux to handle intricate data workflows.
- Planned and delivered a HIPAA-compliant patient portal for a temperature-sensitive medical shipping system using Blazor WebAssembly, enabling encrypted access for over 4,000 concurrent users with advanced authentication, real-time sensor data tracking, and rapid data access that improved response times by 30%.
- Refactored legacy monolithic healthcare software into a modular WPF application with MVVM architecture during the COVID-19 pandemic for an online telecom health insurance system, reducing technical debt by 40% and enabling adaptive, personalized user experiences across mobile applications.

Full Stack .NET Developer at AtNetPlus, Akron, OH

August 2014 – May 2017

- Orchestrated cloud migration strategies by transitioning diverse enterprise applications to Azure App Services, enabling flexible architectures and reducing infrastructure costs by 30% across multiple client systems.
- Architected a dual-platform mobile application using Xamarin.Forms that solved complex field operations challenges, enabling real-time data synchronization and increasing team productivity by 25% across multiple business units.
- Programmed full-stack web applications using React, building extensible frontend solutions for 3+ enterprise clients that enhanced system interoperability and user experience across different business domains.
- Implemented cloud-native solutions using PostgreSQL, Entity Framework, and modern web technologies, demonstrating ability to create robust, synchronized systems that enhance operational efficiency by 15% through advanced data management techniques.

EDUCATION

Cincinnati Christian University, Cincinnati, OH
2014

April 2010 — July

Bachelor of Science in Computer Science

SKILLS

Programming Languages: C#, JavaScript, TypeScript, Python, Java, SQL, HTML5, CSS/SCSS

Backend Technologies: .NET Core, ASP.NET Core, Entity Framework Core, Web API, MVC, LINQ, GraphQL

Frontend Frameworks & Libraries: React.js, Angular, Redux, RxJS, Maui, Bootstrap, Material UI, jQuery

Cloud Platforms & DevOps: Azure (App Services, Functions, Logic Apps, Service Bus, API Management, AD B2C), AWS, GCP, Azure DevOps, GitHub Actions, Docker, Kubernetes, Terraform, CI/CD Pipelines

Databases: MS SQL Server, PostgreSQL, MongoDB, Redis, Azure SQL

Architecture & Design Patterns: Microservices, Event-Driven Architecture, RESTful APIs, CQRS, DDD, Clean Architecture

Messaging & Integration: RabbitMQ, Azure Service Bus, Apache Kafka

Testing & Quality Assurance: xUnit, NUnit, Jest, Cypress, Postman, Newman

Authentication & Security: OAuth 2.0, OpenID Connect, JWT, Azure AD, Identity Server

Additional Expertise: Stripe, HIPAA Compliance, SaaS Architecture, SDK Development, Agile/Scrum, Performance Optimization
