

Lanre Balogun

DevOps/Cloud Engineer

Pikesville, MD, 21208 | +1 240 575 1307 | olanrebalogun77@gmail.com | [LinkedIn](#)

SUMMARY

Cloud/DevOps Engineer with 8+ years of hands-on expertise in building and deploying scalable cloud solutions, including extensive experience with AWS, Azure, and GCP. Proficient in designing automated solutions aligned with Agile methodologies, leveraging IaC tools like Terraform & Cloud Formation to architect and manage cloud environments. Skilled in implementing CI/CD pipelines using Jenkins, GitLab CI, Azure DevOps, and GitHub Actions to streamline application delivery and reduce deployment times by 30%. Adept at integrating monitoring tools such as Prometheus and ELK to ensure 99.99% system reliability. Demonstrated success in bridging development, testing, and operations teams to deliver innovative, secure, and compliant solutions that align with business objectives.

SKILLS

Cloud Platforms:	Azure, AWS
Infrastructure as Code:	Terraform, Ansible
CI/CD & Automation:	Azure DevOps, GitHub Actions, GitOps, Argo CD
Containerization & Orchestration:	Kubernetes, Docker, Argo CD
Monitoring & Logging:	Prometheus, Grafana, BPM, RUM, SiteScope, APM, Azure monitor, App insights
Version Control:	GitHub, Azure Repo
Big Data & Messaging Tools:	Ambari, Kafka, Yarn, Phoenix, Zookeeper
Databases:	MSSQL, MySQL, HBase, Azure SQL
Scripting & Programming:	PowerShell, Bash, YAML, JSON
Operating Systems:	Windows, Linux
ITSM Tools:	HP Service Manager, Rave, Salesforce, Manage Engine

EXPERIENCE

Senior DevOps Engineer

| Aug 2022 – Present

Morgan Stanley, Baltimore, MD

- Streamline deployment processes using Ansible and Terraform, leading to a 30% reduction in deployment times for new service rollouts.
- Create automated scripts in Bash for administrative tasks such as package updates, user management, and network interface configuration.
- Administer containerized applications using Azure Kubernetes Service (AKS) and Kubernetes Cluster, managing the cluster effectively.
- Transition legacy applications to Microsoft Azure Cloud PaaS by setting up CI/CD pipelines on Azure DevOps.
- Built Jenkins pipelines to drive all microservices builds out to the Docker registry and then deployed to Kubernetes, Created Pods, and managed using Kubernetes.
- Designed and managed infrastructure for AWS, Azure, Confidential PaaS, IaaS, SaaS, and IoT, ensuring 40% faster deployment cycles.
- Migrated data and applications using AWS EC2, S3, and Azure Storage services, ensuring zero data loss and reducing migration time by 40%.
- Designed Kubernetes clusters and wrote YAML configurations for deployment, improving deployment efficiency by 30%.
- Design and manage multi-environment Snowflake deployments, reducing compute costs by 35%
- Implement auto-scaling and auto-suspend features across 20+ virtual warehouses, optimizing resource utilization
- Managed version control systems (Git/GitHub, Azure Repos, Bitbucket) by overseeing branches and pull requests, ensuring codebase integrity.
- Managed IAM roles, ensuring least privilege access and KMS for encryption of sensitive data across various AWS resources.

Azure DevOps Engineer

| Oct 2018 – Jul 2022

Uber, USA

- Facilitated the migration of existing on-premises infrastructure to Azure, adhering to enterprise-scale architecture and best Azure security practices.
- Directed the transition to a microservices architecture using Docker and Kubernetes, achieving a 50% decrease in downtime during deployments.
- Develop and manage Infrastructure as Code using tools like Terraform or Azure Resource Manager (ARM) templates.
- Automate provisioning of Azure resources, including Virtual Machines, App Services, AKS, and Storage Accounts.
- Work with development, QA, and operations teams to streamline release processes.
- Implement application and infrastructure monitoring using Azure Monitor, Application Insights, or Log Analytics.
- Integrate security into DevOps workflows using tools like Azure Policy, security scanning, and DevSecOps practices.
- Develop a suite of automation scripts in Python and Shell, which reduce deployment times by 60% and significantly minimize manual errors in the release process.
- Set and measure Service Level Objectives (SLOs) and Service Level Agreements (SLAs).
- Implement and manage platform-level security, including SSL/TLS, managed identity, and access control using Azure Active Directory (AAD).
- Optimize Azure PaaS service costs by analyzing resource usage and implementing auto-scaling policies.
- Design and implement Azure Virtual Networks (VNETs) to meet application and organizational requirements.
- Configure network components like subnets, network security groups (NSGs), route tables, and virtual network peering.
- Configure and manage hybrid cloud connectivity solutions for on-premises integration with Azure.

Cloud Engineer

| Nov 2016 – Sept 2018

DXC Technology, Ashburn, VA

- Migrated application deployment to Microsoft Azure Cloud PaaS by setting up CI/CD pipelines on Azure DevOps.
- Provision and manage Azure resources such as virtual machines (VMs), virtual networks, storage accounts, and Azure Active Directory (AAD).
- Configure and manage Azure compute resources including VMs, App Services, and Azure Functions.
- Implement security measures using Azure Security Center, Key Vault, and Azure Active Directory (AAD) for identity management.
- Minimized deployment errors by 40% by integrating AWS CodePipeline and CodeDeploy into the development process.
- Applied Terraform to manage infrastructure as code for Azure resources, reducing deployment time by 50%.
- Streamlined Windows and Linux server build processes using PowerShell and Bash, resulting in a 50% reduction in server provisioning time.
- Worked on Terraform modules that had version conflicts to utilize CloudFormation during Terraform deployments to enable more control and missing capabilities.
- Adapted Kanban methodologies to manage continuous workflows, ensuring seamless pipeline execution and task prioritization.
- Coordinated between development, operations, and QA teams to align project objectives and adhere to timelines effectively.

EDUCATION

Bachelor's in Political Science and Government

Lagos State University, Lagos, Nigeria

CERTIFICATIONS

Microsoft AZ-104

Microsoft AZ-400

AWS Certified Cloud Practitioner

CompTIA A+

CompTIA Linux+

Linux Professional Institute- (LPIC-1)

CompTIA Security+

Certified Information Systems Auditor (CISA)

Designing and Implementing Microsoft DevOps Solutions (AZ-400)

Microsoft Certified: Azure Administrator Associate

CompTIA Security+ CE Certification
