

Meghana Emani

Sr. Python Developer

(202) 940-6186 | meghanaemani9@gmail.com

PROFESSIONAL SUMMARY

- **Having 9+ of industry IT experience in Analysis, Design, Development, Management, and Implementation** of various standalone and client - server architecture-based enterprise application software knowledge in **Python, PHP, MySQL, NoSQL, UNIX** and **Linux**.
- Experience in **Shell scripting** (Bash, ZSH, KSH, etc.) and **UNIX** commands and experience in **Shell Scripting**, SQL Server UNIX and Linux.
- Extensive experience in Text Analytics, generating data visualizations using **Python 3.12/3.10** and creating dashboards using tools like **Tableau, Matplotlib, Plotly**.
- Competent in creating **Unified Modeling Language (UML)** such as Use Case Diagrams, Activity Diagrams, and Sequence Diagrams. Proficient in using Business Analysis tools such as **MS Visio, Word, Excel**, Visual Paradigm, etc.
- Using **NumPy, Pandas**, Pytorch and other libraries to work with large data sets and threading limitations, multi-process architecture
- Utilized analytical applications like and **Python 3.12/3.10/3.8/3.6** to identify trends and relationships between different pieces of data, draw appropriate conclusions and translate analytical findings into risk management and marketing strategies that drive value.
- Creating custom **Kubernetes** operators and controllers for application-specific automation and implementing **Kubernetes** namespaces and **RBAC** for secure multi-tenancy.
- Experience in developing web-based applications using Python **3.12/3.10/3.8/3.6**, Django, GTK, QT, C++, XML, CSS3, HTML5, **DHTML, JavaScript**, and JQuery
- Developing entire frontend and backend modules using **Python 3.12** on **Django** Web Framework. Used **GitHub** repository for version control.
- Used **NodeJS** for Node Package Manager (**NPM**) and Grunt plugin for building the Projects. Having experience with **Cloud API** Computing Service environment like **Amazon Web Services (AWS)**.
- Hands on experience in implementing a custom caching mechanism on **GitHub**, optimizing data retrieval and improving application performance.
- Experience in developing web - based applications using **Python, Django, XML, CSS3, HTML5** in Object Oriented Concepts with **C, Java, and Python 3.12/3.10/3.8/3.6**.
- Familiarity and experience in the work environment consisting of Business analysts, Production Support teams, Subject Matter Experts, **Database** Administrators and **Database** developers.
- Experience in integration technologies such as **HTTP, REST, SOAP** in developing **SQL, PL/SQL** scripts in **oracle** distributed environment to **data analysis**.
- Experience with Configuration Management Tools (**Puppet, Ansible**) on several **python 3.12** packages like **NumPy, SciPy**, pandas, **PyTables, OS, Pickle**.
- Proficient with container systems like **Docker** and container orchestration like **EC2** Container Service, and **Kubernetes**, worked with **Terraform**
- Experience **Design, Development, Testing, Automation, Enhancement** and **Maintenance** of **Applicat** and **Tool** with different methodologies such as **Agile** with **AgileScrum** and **AgileKanban** methodologies
- Experience in automated process for builds and deployments by using **Jenkins, Ant, Maven, Shell Script** on **HTML5, CSS3, JavaScript, Git, REST API, MongoDB**.
- Strong experience of software development in **Python** (libraries: NumPy, SciPy, Matplotlib, Pandas, Python-SQL, Selenium, Robot, Folium, Pytest, Beautiful soup) and IDEs – VS Code, **PyCharm, Jupyter** notebook.
- Good experience in developing web applications implementing Model View Control architecture using Django, **Flask**, Pyramid and **Bottle** web application frameworks.
- Experience with Version Control, ideally and **GIT** familiarity with development best practices such as code reviews and **unit testing**.
- Ability to analyze user requirements or technical specifications as well as write and execute reliable, testable and efficient code for **Python 3.12** based applications.
- Experience in integration of various data sources including **MySQL, PostgreSQL, Oracle** and **MS access** and **NoSQL** sources like flat files, **MongoDB** into staging area.

TECHNICAL SKILLS

Frameworks	Django, Flask,Bottle, Cloudera (CDH 5.5.2), CSS3 Bootstrap SDETs, Spring
Web Technologies	HTML, CSS3, DOM,, REST API, Java Script, NodeJS, JQuery, AJAX, XML, AngularJS
Programming Languages	Python 3.12/3.10/3.8/3.6, Java, C, C++,SQL, PostgreSQL
J2EE Technologies	JSP, Java Servlets, JNDI, JDBC and JMS
Devops Tools	Docker, Kubernetes, AWS, Jenkins
Version Control	CI/CD, Git, GitHub
Analytic Tools	SAS, Shell Scripting, Tableau,
Application servers	Apache Tomcat, JBoss
Databases	Oracle (9i, 10g, 11g, 13c, 18c), MySQL, Apache Cassandra, MongoDB
Operating Systems	Windows, Red hat Linux 4.x/5.x/6.x, Ubuntu,iOS
Protocols	TCP/IP, HTTP/HTTPS, SOAP, SMTP
Testing Tools	HP ALM, Bugzilla and JIRA

WORK EXPERIENCE

Sr. Python Developer
Davita, Denver, CO

Apr 2024 - Till Date

Responsibilities:

- Working with **Splunk** for testing the performance and debugging server level problems on **Kafka** and **RabbitMQ** queues.
- Working on Integrating **Pytest** for unit and integration testing of **Numpy** functions and also developed Numpy-based modules for handling multi-dimensional arrays.
- Working on **Jira** for managing the tasks and improving the individual performance making recommendations to the team in terms of appropriate testing techniques, shared testing tasks.
- Experience in python packages such as **NumPy**, **matplotlib**, **Pandas**, **SciPy**, Pickling, **JSON**. Experience in **Python 3.12** test-driven development techniques.
- Developing **Spark code and Spark SQL/Streaming** for faster testing and processing of data managing Exchange 2010 and 2013, **active directory**, **DNS**, **DHCP**, and terminal servers
- Effective use of **PuTTY**, **Dame Ware**, **Active Directory**, and **BMC** Remedy routine F-5 Load Balancer, ASA wireless, Palo Alto config.
- Performing Web application development using **Python 3.12**, **Django**, **Flask**, **MongoDB**, **JavaScript**, **AJAX**, **HTML5**, **XML** and template languages
- Handling **REST API** services with the help of **Python 3.12** library **urllib** loaded the data from Teradata to HMTL using **Teradata Hadoop connectors**.
- Using **HTTPLib2**, **Urllib2**, **Beautiful Soup** libraries for data scraping and **NumPy**, **petl**, **Json**, **Pickle**, **Pandas**, **Scipy** and **Matplotlib** for data storage and plotting.
- Working on ensuring compliance with industry standards and best practices for testing methodologies, with **Pytest** as a key tool in the toolkit.
- Working with open-source technologies like **Apache Traffic Server** and **Chef** and used **Selenium Grid** to execute tests on different nodes and on several browsers
- Wrote scripts in **Python 3.12** for parsing various file types (xml, .csv, txt, HTML5) and loaded data into **Oracle/MySQL** databases
- Experience in the **CI/CD** pipeline management for managing the weekly releases automated most of the daily task using **python 3.12** scripting
- Designing the front end of the application using **Python 3.12**, **HTML5**, **CSS3**, **AJAX**, **JSON** and **JQuery**. Worked on backend of the application.
- Developing complex web, middleware, and back end systems in **Python 3.12**, **SQL** and **Perl** for **Linux** and Windows and **Git** repository and added the project to **GitHub**.
- Experience with **Linux command** and **bash shell scripting**. Defined different **Django** API profiling techniques for faster rendering information.
- Using **Ansible and Docker** for managing the application environments developed **Python 3.12** scripts for testing the car functioning on different services.

- Developing entire frontend and backend modules using **Python 3.12** on **Django** Web Framework. Used **GitHub** repository for version control.
- Working on mentoring junior developers in best practices for **NumPy** and **Pytest** and collaborated with data scientists to integrate **NumPy** into machine learning pipelines.
- Working on distributed test automation execution on different environment as part of Continuous Integration (CI) Process using **Selenium** Grid and **Jenkins**.
- Working extensively with **Service Layer** the **Object-Oriented Analysis and Design (OOAD)** process of User **Acceptance Testing for Data Migration** and responsible in creating **Testing Guides, Instruction Packets and Data Samples**.
- Performing troubleshooting for **escalated issues, upgrades and deployments** for complex environments. Has in-depth knowledge of a majority of computer Provides guidance to lower level technical specialist on specific functional tasks
- Conduct **unit and regression testing** for the scripts which have been developed **shell scripts** based on the requirement code (**Unix Shell scripts**) and writing unit test **cases** for the same.
- Developing a **data pipeline using Kafka, HBase, Spark and Hive** to ingest, transform and analysing customer behavioural data also developed **Spark** jobs and Hive Jobs to summarize and transform data.
- Hands on experience in Amazon Web Services (**AWS**) provisioning and good knowledge of **AWS** services like **EC2, S3, Red shift, ELB (Load Balancers)**.

Environment: Python 3.12, AWS, DevOps, Django, NumPy, REST API, Javascript, JQuery, Oracle, Pytest, Matplotlib, Docker, Flask, Splunk, SQL, MongoDB, CI/CD, Selenium, GitHub, Ansible, Pandas, HTML5, CSS3, NodeJS, PostgreSQL, Unit Test, Linux, JIRA, Shell Scripting.

Python Developer
Fifth Third Bank, Cincinnati, OH

Nov 2019 – Jul 2022

Responsibilities:

- Development Life Cycle (**SDLC**) and used agile methodology for developing application. Upgraded existing UI with HTML5, CSS3, jQuery and Bootstrap.
- Implemented the application using **Python 3.10 Spring IOC** (Inversion of Control), **Django** Framework and handled the security using Python Spring Security.
- Created pods, nodes and clusters using **Kubernetes** running in **Minikube** that makes it easy to run **Kubernetes** locally web application development using **Python 3.10, Django, Flask, JavaScript, AJAX, HTML5**, and template languages.
- Analyze Format data using Machine Learning algorithm by Python Scikit-Learn. Experience in python, **Jupyter**, Scientific computing stack (**NumPy, scipy, pandas and matplotlib**).
- Automated Regular **AWS tasks like snapshots** creation using Python 3.10 scripts build servers using **AWS, importing volumes, launching EC2, RDS, creating security groups, auto-scaling, load balancers (ELBs)** in the defined virtual private connection.
- Implemented **Spark using Scala and Spark SQL** for faster testing and processing of data.
- Developed tools using **Python 3.10, Shell scripting, XML** to automate some processes managed Virtual servers (Ubuntu, Linux and Windows) on **AWS EC2 using Open-Source Chef server**.
- Experienced with batch processing of data sources using **Apache Spark** in implementing **Spark RDD transformations**, actions to implement business analysis.
- Involved in analysis, specification, design, and implementation and testing phases of Software create and maintain test plans for infrastructure upgrades, patches, and fixes.
- Updated internal websites with **JavaScript, Python 3.10, Django**, and SQL Restful web services using **Python REST API Framework**.
- Involved in designing and deploying multitude applications utilizing almost all of the **AWS stack** (Including EC2, Route53, S3, RDS, Dynamo DB, SNS, SQS, IAM) focusing on high-availability, **fault tolerance, and auto-scaling in AWS Cloud Formation**.
- Manage code versioning with **GitHub**, Bit Bucket and deployment to staging and production servers and implement MVC architecture in developing the web application with the help of **Django** framework
- Developed and Deployed **SOAP** based Web Services on Tomcat Server used **Jenkins** for continuous integration for code quality inspection and worked on building local repository mirror and source code management using **GitHub**.
- Used **IDE** tool to develop the application and **JIRA** for bug and issue tracking wrote unit testing codes using unit test, resolving bugs and other defects using **Firebug**.
- Used **JIRA** to assign, track, report and audit the issues **GIT** to coordinate team development.

- Worked on statistical analysis by processing of collected data and Data Visualization using **Python 3.10 Pandas, Matplotlib, Scipy** and **NumPy** packages
- Deployed and monitored scalable infrastructure on **Amazon Web Services (AWS) & configuration management using Chef**
- Worked on data processing with **MongoDB** as a source and target database extensively on **REST APIs, JSON, Microservices, CI/CD, Docker** containers.
- Worked on conducting **Pytest** test case reviews to maintain high testing standards and automating regression testing using **Pytest** to catch software defects early.
- Developed Server-side automation using **NodeJS** scripting and connecting different types of **SQL and NoSQL** stores from **NodeJS** responsible for handling the integration of database systems
- Used object-relational mapping (ORM) solution, technique of mapping data representation from MVC model to **Oracle** Relational data model with an SQL-based schema
- Used Python's multiple data science packages like **Pandas, NumPy, matplotlib, Seaborn, SciPy**, Scikit-learn and NLTK. Performed Exploratory Data Analysis, trying to find trends and clusters
- Used **Selenium** Library to write fully functioning test automation process that allowed the simulation of submitting different we request from multiple browser to web application
- Performed data analysis with python using the panda's library. Have used n-dimensional arrays in **NumPy** as well as the **pandas** Series and Data Frames to analyse data.

Environment: Python 3.10, Django, AWS, HTML5, NumPy, Pandas, Matplotlib, Pytest, REST API, CSS, NoSQL, SQL, NodeJS, Flask, Shell Scripting, Docker, Kubernetes, Oracle, CI/CD, JavaScript, Selenium, JQuery, Jenkins, MongoDB, Jira, GIT, Unit Test, Firebug, Web Services.

Python Developer

Regions Financial, Birmingham, AL

Sep 2017 – Oct 2019

Responsibilities:

- Developed various algorithms to support and aid business requirements maintaining the versions using **CVS** and sending the release notes for each release.
- Deployed **APIs** as per integration requirements, monitored, identified and implemented new integration/API needs followed **Agile/Scrum** process involved in Sprint Planning/Showcases/Stand-ups and walkthroughs.
- Designed web pages using **HTML5, CSS3, JavaScript, Bootstrap**, handled **RESTful** services with the help of **Python 3.8** library **urllib**.
- Experience with **Linux command** and **bash shell scripting** worked on **Big Data Integration & Analytics** based on **Hadoop, Spark** and **Kafka**.
- Designed and implemented application performance monitoring for production environment composed python 3.8 scripts to parse **XML** and **JSON** reports and load the information in database.
- Developed scalable applications and to effectively manage technology **Jquery** tradeoffs and risks as an application developer experienced with controllers, views and models in **NodeJS**
- Web application development using **Python 3.8, Django, Flask, JavaScript, AJAX, HTML5, XML** and template languages.
- Working extensively on **REST APIs, JSON, Microservices, CI/CD, Docker** containers performed text analytics and processing, using in-memory computing capacities of **spark** using **Scala**.
- Involved in building scalable, distributed data lake system for confidential real time and batch analytical needs successfully migrated the **Django** database from **SQLite** to **MySQL** to **PostgreSQL** with complete data integrity.
- Created reusable, testable, and efficient **Python 3.8** code using best programming structures, flowcharts and algorithms as well as assisted in designing and implementing **Python 3.8** modules to load data from various sources.
- Executed the unit tests and performed the Integration Testing **MongoDB** used the built in toolkit to build and enhance user facing products.
- Developed data analysis tools using **SQL** and **Python 3.8** code analyzed and translated business requirements into technical or design specifications.
- Collaborated with **QA** team in performing unit, integration and functional tests for new programs as needed as well as debugging and adding new features or functionalities in existing **Python 3.8** programs for optimization and performance improvement.

Environment: Python 3.8, Django, Flask, Pandas, XML, XHTML, HTML5, AJAX, CSS3, JavaScript, JQuery, JSON, NodeJS, Shell scripting, Microservices, CI/CD, Docker, PostgreSQL, MongoDB, GitHub, SQL, Rest API, Jira, Agile and Windows.

Responsibilities:

- Engaged with the advancement of front end of the application utilizing **Python 3.6, HTML, CSS, AJAX, JSON and JQuery** and took a shot at backend of the application, mostly utilizing Active Records.
- Developed powerful pages utilizing **Python 3.6, Django** Frameworks observing and notice apparatuses utilizing Python created Data tables using PyQt to show patient and approach data and include, erase, refresh understanding records.
- Improved the application by outlining and creating it utilizing **HTML and JavaScript** and generated **Python 3.6, Django** Forms to record information of online clients.
- Used information structures like registries, tuples, protest arranged class based legacy highlights for making complex calculations of systems.
- Created MySQL back-end for information passage from Flash. Helped the Flash engineer send the right information through question strings.
- Involved in building database Model, **APIs** and Views using python 3.6, so as to fabricate an intelligent electronic arrangement.
- Developed **MVC** model supplanting of current item with **Django** wrote a Python 3.6 module to interface and view the status of an Apache Cassandra case.
- Developed **Python 3.6** Design code for assembling quality, checking, logging, and investigating code enhancement responsible for examination, outline, improvement and mix of Market Risk applications with **FLEX/JAVA/PYTHON**.
- Involved in building database Model, **APIs** and Views using Python 3.6, keeping in mind the end goal to manufacture an intuitive online arrangement.
- Wrote Python schedules to sign into the sites and bring information for chose alternatives **Python 3.6** to put information into **JSON** records for testing **Django** Websites.

Environment: Python 3.6, Django, Beautiful soup, HTML, CSS, Bootstrap, XML, JSON, JavaScript, JQuery, Apache, Linux, Restful Web administrations, Git, MySQL, T-SQL, Eclipse.

EDUCATION

- Master's in Computers Science from Auburn University at Montgomery, USA 2018
- Bachelor's in Computers Science from Prasad V. Potluri Siddhartha Institute Of Technology, India 2014
