SUMMARY

- Results-oriented Project Manager with 7+ years in project planning, implementation, and resource management in various domains, including ERP Implementation, banking, insurance, and digital media.
- Certified Project Management Professional (PMP) leveraging a Master's in Project Management and a reputation for success leading cross-functional teams to accomplish goals.
- Extensive experience in roles such as Project management and Senior Business Analyst with excellent knowledge of the full Software Development Life Cycle (SDLC) methodologies, BI/Data warehouse, data Analysis, frameworks and processes. Experienced in managing requirements from project inception through release.
- Proven experience in managing Salesforce implementation projects, including customization, integration, and deployment of Salesforce solutions across various business domains.
- Proficient in understanding enterprise architecture, including Services, ODM, Databases, UI, BPM, and IVR systems, with a focus on delivering technical solutions for contact center operations.
- Skilled in using Salesforce tools such as Salesforce Lightning, Salesforce CRM, and Salesforce AppExchange to drive business process improvements and enhance customer relationship management.
- Skilled in designing and developing Cognos Framework Manager models to support complex reporting requirements.
- Expertise in creating Cognos Report Studio and Query Studio reports, including drill-through, cross-tab, and conditional formatting.
- Experience in Cognos Analytics for data exploration, visualization, and dashboard creation.
- Extensive experience in SAP modules (FI, CO, SD, MM) and SAP S/4HANA, with a deep understanding of end-to-end business processes and system integration.
- Proficient in SAP Business Intelligence (BI) tools, including SAP BW/4HANA, SAP Analytics Cloud, and SAP Lumira, for data visualization, reporting, and decision support.
- Expertise in using Rational tools for creating use cases, version control, and defect tracking and monitoring and used the Rational Unified Process (RUP) methodology in all areas of the software development life cycle (SDLC).
- Good Knowledge of various financial products like Stocks, Bonds, Mortgage - Backed Securities (MBS), Collateral Mortgage Obligation (CMO), and Fixed Income Instruments.
- Experienced in conducting Requirement Analysis, Use Case Design, Designing Test Plans, and developed database schemas based on logical models.
- Experience with designing and verifying databases on Oracle and SQL Server RDBMS using Entity-Relationship Diagrams (ERD).
- Experience in integrating Cognos with various data sources, including relational databases, data warehouses, and cloud platforms
- Experienced in multi-tier, database-driven, client-server, Internet, Web, and wireless development. Focus on making systems better through Agile Methodologies, re-architecture, re-factoring, code cleanup, and redesign.
- Experience, comfort level and success working in agile environment.
- Experienced in writing Test Plan and Test Cases and aggressively involved in Regression Testing and

Performance Testing using automation tools like Win Runner, LoadRunner, Test Director, Quick Test Pro, Silk Test and Oracle table manipulation using SQL.

- Knowledge on different DBMS systems and Business Intelligence (BI) tools.
- Ability to gather business and Technical Requirements from both formal and informal sessions utilizing a variety of software methodologies including, Use Cases and the Rational Unified Process.
- Experience working as Joint Application Development (JAD) facilitator and meetings coordinator with excellent interpersonal skills.
- Expertise in broad range of technologies, including business process tools such as Microsoft Project, Primavera, MS Access, MS Visio, technical assessment tools, Data Warehousing concepts and web design and development.
- Experienced in leading Agile-driven Salesforce projects, ensuring timely delivery of Salesforce solutions while aligning with business goals and stakeholder expectations.
- Experience working in Cash, Bond, and Liquidity Management.
- Strong Communication and Presentation Skills substantiated in past assignments with developers, project managers, subject-matter experts, stakeholders, system implementers, and application end-users.
- Creative and Enthusiastic Self-Starter with integrative thinking skills, capable of forming and maintaining positive and productive working relationships in internal, external, independent, and team environments.

Education:

- Masters in Project Management, Lewis University, Romeoville Jan 2023 – Dec 2024
Awards: Project Management Student Excellence Award 2024
- Bachelor of Fine Arts in Game Art and Design (JNFUA Affiliated) Oct 2012 – Aug 2016 Backstage
Pass Institute of Technology, Hyderabad

Certifications:

- Project Management Professional (PMP) – Project Management Institute (PMI), (Dec 2024).

TECHNICAL SKILLS

SDLC Methodologies:	Waterfall, Agile-Scrum/Safe, RUP
Project Management/ Collaboration tools	JIRA, Rally, MS SharePoint, MS Project, MS Office Suite, GitHub, HP ALM, Version One, UnifiedModelling Language (UML 2.0), Azure DevOps
MS Office Tools:	MS Word, MS Project, MS Visio, MS SharePoint
Design Tools:	Figma, Adobe Illustrator, Sketch, Procreate (iPad)
Testing Tools:	HP QC, HP ALM, HP QFT, HP Load Runner, SOAP UI, Oracle Application Testing Suite (OATS), Selenium
Bug Reporting Tools:	ALM/Quality Centre, ClearQuest, JIRA, Bugzilla, Rally
Databases:	Oracle, MS Access, MS SQL Server, Linux Server, C360
Operating Systems:	Windows, UNIX, Mac OS X, Linux
Business Modelling Tools:	Rational Rose, Microsoft Visio

Survey Softwares:	Medallia, Qualtrics
SAP Modules:	FI, CO, SD, MM, PP, SAP S/4HANA, SAP Fiori, SAP UI5, SAP BW/4HANA, SAP Analytics Cloud
Financial Management Tools	Apptio One, Excel
Business Intelligence Tools	IBM Cognos (Framework Manager, Report Studio, Query Studio, Cognos Analytics, Transformer, Event Studio), Tableau, Power BI.
Salesforce Tools:	Salesforce CRM, Salesforce Lightning, Salesforce DX, Salesforce AppExchange, Salesforce Analytics, Sales Cloud, Service Cloud, Marketing Cloud

PROFESSIONAL EXPERIENCE

Walmart – Bentonville, Arkansas

Mar 2024 – Present

Project Manager

Responsibilities:

- Leading AI implementation, design development and ensuring alignment with client goals and delivering business value for core business processes, decision support systems, and user workflows, to deliver a sustainable business model.
- Involved in initiation and planning of the projects that included preparation of preliminary project scope statement and scoping
- Prepared the overall project plan, project schedule, cost estimation, resource ramp up/ramp down plan. Prepared cost estimates, level of effort, needs assessment report and document of understanding.
- Prepared project schedule, resource allocation plan and initiated the project by forming and developing the project team.
- Used “Bottom-Up Estimation” for cost estimations for the projects and prepared a cost baseline to measure and monitor cost performance.
- Managed the projects under SCRUM framework within the confines of EssUP, consisting of best practices from SCRUM and CMMI Coordinating with architects and solution delivery team to create technical specification documents outlining interfaces, file types, message layout, business and validation rules, transformation rules, data field mappings, and implementation logic.
- Working closely with business stakeholders and customers to create customer profile checklists, collecting all required inputs needed to set up a customer in the new system.
- Documentation, planning, UAT and RTP creation (e.g. project schedules, project plans, communication plans, RACI Matrices).
- Creating templates & business process documentations, requirements, checklists, design specs, action trackers, defect trackers, risk registers, change control logs, status reporting, pre-UAT checklists, UAT execution reporting
- Restating business needs into user stories and manage Product Backlog in TFS consisting of user stories, bugs and change requests.
- Enabling Scrum ceremonies including Sprint Planning, Daily Standups, Backlog Grooming (Product Backlog Refinement) sessions, Sprint Reviews, and Sprint Retrospectives.
- Providing coaching and mentoring for Development team members, Product Owners and other

Project Managers on Agile principles, tools and techniques.

- Helping to eliminate obstacles for the development team and helping the Product Owner in managing the product backlog.
- Collaborating with IT teams to integrate Salesforce with existing systems, ensuring seamless data flow and reporting capabilities.
- Managing co-ordination among the Scrum team and the other teams.
- Daily status calls, Meetings for implementation-specific groups and activities, and work through a multi-vendor landscape.
- Facilitating UAT meetings, handling interactions with multiple teams/vendors to discuss defect status/triage and resolution and defect discussions and prioritization Providing support to the UAT team for acceptance criteria, test cases and test data preparation.
- Stakeholder management and expectations, status, and performance reporting (EVMs), risks, issues, escalations, quality, and surveys.
- Creating and maintaining change control log templates, defining roles and responsibilities, and coordinating with the Change Control Board (CCB), originators, evaluators, modifiers, testers, and Project Managers to prioritize and manage the lifecycle of change requests.
- Defining specifications for industry-level standard reports that exist for the good of all customers.
- Resolving problem tickets by working with Business, IT and support teams.
- Analysed the functional requirements and prepared the application and system design and conversion/migration strategy.
- Monitored and tracked the project for development, peer reviews, testing, implementation and warranty support
- Utilizing advanced Excel expertise, including macros, formulas, pivot tables, and charts, to automate reports and graphs.
- Utilizing tools such as learning management systems (LMS), survey software (Qualtrics), and Microsoft Suite applications (Excel, PowerPoint, Word) to support program scheduling, analysis, and reporting.

Sofi - San Francisco, CA

Aug 2018 to Dec 2022

Project Manager

Responsibilities

- Built and managed project documentation such as Use Case Diagrams, Activity Diagrams, Sequence Diagrams, and ER Diagrams in MS Visio to communicate project requirements and workflows.
- Federated Agile SDLC processes (i.e., Scrum) for project timelines, deliverables, and team collaboration. Tools like Scrum Work Pro and Microsoft Office were used for efficient implementation.
- Conducted business process modeling using SAP Solution Manager to map existing processes and identify areas for improvement.
- Executed data modeling, generated documentation for data mapping and data definition analysis.
- Track and monitor the progress of the development phase and test cases execution phase according to the plans and take corrective action in case of variances. Accurate status reporting to senior management and customers.
- Identify potential risks to the completion of the project, including resources, costs and systems and recommend appropriate solutions.
- Partnered strategically with business units to obtain a working knowledge of business processes, products [NG3], and revenue streams, empowering insight and engaging in effective decision-making.
- Established and migrated on-prem infrastructure to Microsoft Azure for horizontal scaling and more efficient cloud solutions.
- Led the CI/CD pipeline implementation process by using DevOps tools to automate tests and

deployment processes to increase the ability to develop at speed and the efficiency of delivery of product.

- Developed and maintained Cognos reports and dashboards to provide insights into business performance and key metrics.
- Implemented Cognos Analytics for data exploration and visualization, enabling stakeholders to make data-driven decisions.
- Taught & Published papers on design & development of Intuitive User Interfaces for Web Applications Deployed Responsive Design Principles
- Prepared and documented specification requirements for data catalog functions in accordance with business understanding and specification technical.
- Supported the implementation of IVR systems for customer service operations, ensuring integration with existing enterprise architecture.
- Responsible for managing the implementation of a Data Warehouse for personal lines property and casualty insurance, including UAT testing and sign off from business users.
- Technical support was also provided on the usage of the Excel workbooks used for workers 'comp data to HR with regards to data analysis as well as data visualization.
- Data Integrator was used to load data from multiple sources (MS Access, Excel, CSV) to MS SQL Server, followed by survey data statistical analysis using IBM SPSS.
- Engaged in Agile/Scrum requirements gathering, assisted with writing user stories, and generated Jira reports on resolution rates and resource utilization to track project progress and team performance.
- Collaborated with the SAP BI team to develop dashboards and reports using SAP BW/4HANA and SAP Analytics Cloud for real-time business insights.

Hungama Digital Media

Dec 2017 to Aug 2018

Game Producer

Responsibilities:

- Gathered and documented game requirements from stakeholders across departments, ensuring clear understanding of the game needs. Utilized requirements elicitation techniques like interviews, workshops, surveys and communication skills to document functional and nonfunctional requirements.
- Translated Game requirements into technical specifications for development teams, ensuring clear documentation of user stories, use cases, and system functionality. Demonstrate proficiency in technical writing, user stories, and Agile methodologies (Scrum/Kanban).
- Bridged the gap between business stakeholders and technical teams by ensuring clear understanding of game requirements both ways. Leveraged stakeholder management, active listening, and problem-solving skills to facilitate effective communication and alignment.
- Facilitated the design and implementation of IT solutions, collaborating with developers and designers to ensure the solution meets game requirements. Strong understanding of game development lifecycle (GDLC), systems design, and technical architecture is essential.
- Supported project management activities, including defining project scope, timelines, and deliverables. Utilized project management tools like Jira, Redmine, Trello, MS Project to track progress, manage risks, and ensure timely delivery.
- Worked on system integrations and ensured data flows seamlessly between internal systems (CRM, ERP, etc.) and third-party tools. Strong knowledge of API integration, web services (REST/SOAP), and data mapping is essential.
- Conducted gap analysis to identify discrepancies between current and future states, documenting existing business processes and recommending improvements. Demonstrate proficiency in business process modeling (BPMN, flowcharts, use case diagrams).

- Assisted in game testing and quality assurance (QA), ensuring that the final product meets business expectations. Manage test cases, facilitate User Acceptance Testing (UAT), and track defects using tools like Jira, TestRail, or Quality Center.
- Collaborated with stakeholders to prioritize features and define product roadmaps, using business objectives and user feedback to influence product development. Skills in product management, backlog grooming, and prioritization are key.
- Kept posted on project status, including progress on deliverables, timelines, and resource allocation.
- Used data visualization tools like Power BI, Tableau and reporting techniques to communicate key metrics and insights.
- Used RAID (Risks, Assumptions, Issues, Dependencies) and RACI (Responsible, Accountable, Consulted, Informed) framework for identifying and managing project risks.
- Informed stakeholders of project status, risks, and milestones on a regular basis to keep aligned with organizational goals.
- Implemented interdepartmental workflows to improve efficiency and prevent bottlenecks during the game development cycles.
- Structured quality assurance processes for polished, bug-free game builds.
- Experienced in user experience (UX) design and managing Request for Proposal (RFP) processes.
- Worked across departments with clients and vendors to obtain the assets, tools, and services needed to successfully complete the project.
- Analyzed and optimized business processes, identifying inefficiencies or automation opportunities. Expertise in Business Process Management (BPM) and Lean Six Sigma methodologies is valuable for continuous improvement.
- Supported data migration efforts, ensuring the accurate mapping of data from legacy systems to new platforms. Strong skills in data migration, ETL processes, and data validation are required.
- Provided post-implementation support, troubleshooting and resolving issues that arise after the system goes live. Problem-solving skills, technical troubleshooting, and customer support experience are important.
- Assisted in the preparation of training materials and user guides, ensuring that end-users understand the system and how to use it. Instructional design, training delivery, and user documentation skills are essential.

CoForge, Hyderabad India

Sept 2016 to Dec 2017

Business Analyst

Responsibilities:

- Interacted with Business Users and stakeholders to gather the requirements and Creating application. Prototypes and screen mock-ups and experience in using VISIO, MS office
- Gap analysis of all dimensions required to build the new Data Warehouse and worked extensively in Fixed Income, Securities, Derivatives, Equities etc.
- Involved in developing mapping documents indicating the source tables, transformation required, business rules, and target table's columns and data types for Data models dealing with Swift.
- Involved in documenting the business requirements and data specifications for Business Objects Universes and Reports and documented functional and non-functional requirements
- Conducted JAD sessions involving the user community to identify, analyze and formalize requirements and establish working relationships with business functions and solution delivery teams to meet the individual needs of the business functions
- Created Cognos reports and dashboards to support business intelligence needs, including drill-through and cross-tab reports.

- Worked with Cognos Framework Manager to design and deploy metadata models for reporting and analytics.
- Provided Cognos support to business users, including troubleshooting report issues and optimizing report performance.
- Managed all the requirements in RequisitePro, making them available to the whole project team and also developed requirements traceability matrices
- Developed the workflows using Workflow Manager to run the sessions and monitor them using Workflow monitor and also used MS Project and Clarity and also experience with 21 CFR Part 11 Compliance and documented functional and non-functional requirements
- Developed the reports using features like drill capabilities, Functions, slice and dice, and cross tab tables with multiple breaks.
- Provided BO support for the business users and also worked with Documentum.
- Created Test Scenarios and developed strategies with QA team to track and resolve defects.
- Used SQL tools like TOAD to run SQL queries and validate the data in warehouse.
- Keep track of scheduled environment refreshes and coordinate/communicate with DevOps, and Analysts and Creating graphical representations of complex business processes
- Offshore - onsite coordination with daily status updates and experience designing Business Process Modeling Notation.
