

Narasimha Reddy Boyapalli
Java Full Stack Developer
(469) 405-1703 | boyapallinarasimha@gmail.com

PROFESSIONAL SUMMARY:

- Over 7 years of experience in Full Stack Java Development, covering all phases of the Software Development Life Cycle (SDLC), including requirements gathering, system design, development, testing, deployment, and maintenance in Agile (SCRUM), Test-Driven Development (TDD), and Waterfall environments.
- Expert in Java-based back-end development, specializing in Spring Boot, Spring MVC, and J2EE, with hands-on experience in designing and implementing RESTful APIs, microservices, and enterprise-level applications with a focus on scalability, maintainability, and performance optimization.
- Extensive experience in relational databases (PostgreSQL, MySQL, MSSQL, Oracle) and NoSQL databases (MongoDB, DynamoDB), implementing optimized queries, indexing strategies, and data integrity mechanisms for high-performance data processing.
- Cloud computing expertise on AWS and GCP, leveraging EC2, S3, RDS, IAM, Lambda, and KMS encryption to design secure, scalable, and highly available architectures.
- CI/CD and DevOps experience, implementing Jenkins-based pipelines, automating infrastructure provisioning with Terraform, and managing Dockerized microservices orchestrated with Kubernetes.
- Strong background in application security, integrating Spring Security, OAuth2, JWT, AWS WAF, and IAM policies to protect web applications and enforce role-based access controls (RBAC).
- Real-time data processing expertise, utilizing Kafka, RabbitMQ, and AWS Lambda for event-driven architectures, ensuring low-latency data streaming and asynchronous messaging.
- API development and integration, designing and implementing GraphQL and RESTful APIs for seamless data communication across distributed systems.
- Frontend development experience in Angular and React, building responsive, dynamic, and modular UI components, optimizing state management with Redux, and improving performance using lazy loading and efficient API calls.
- Version control and Agile collaboration, utilizing Git, GitHub, Bitbucket, tracking development progress with JIRA, and automating builds with Maven and Gradle.

TECHNICAL SKILLS:

Languages	Java 8/11/16, J2EE, SQL, PL/SQL, JavaScript
J2EE technologies	Spring (IOC, Batch, Boot, Cloud, AOP, Security, MVC), Hibernate, EclipseLink, REST, SOAP, Servlets, JSP, JDBC, Junit, Microservices, Mockito.
Web Technologies	CSS, Bootstrap, HTML, JavaScript, Angular 8/9/10/11/12 and 16.
Cloud Environments	AWS, Kubernetes, Eureka
Web servers	Apache Tomcat, Oracle WebLogic, Web Sockets, and JBoss.
Database	Oracle, MySQL, PostgreSQL, MS SQL, MongoDB/NoSQL, Cassandra, DynamoDB, Elastic Search.
IDEs	Eclipse, IntelliJ, Spring Tool Suite (STS), RAD, VS Code.
Design Patterns	MVC, Front Controller, Session Facade, Singleton, Business Delegate and DAO patterns
ORM mapping	Hibernate, JDBC, EclipseLink.
CI/CD &Version Control	Docker, Kubernetes, BitBucket, SVN, Git, Jenkins
Methodologies	Agile Scrum, Waterfall, BDD.
Testing Tools/ Others	JUnit, Post Man, Soap UI, Jasmine, Karma.
Build Tools	Maven, Jenkins, Gradle.
Message Queues	Apache Kafka, JMS, Zookeeper.

PROFESSIONAL EXPERIENCE:

M&T Bank, Buffalo, NY
Full Stack Java Developer

February 2023 - Till Present

Responsibilities:

- Developed and enhanced online banking portals for personal and business customers, enabling secure access to services such as account management, fund transfers, bill payments, and loan applications.
- Led improvements to the mobile banking app, integrating features like mobile check deposits, financial tracking tools, and secure account access to enhance user experience.
- Designed and implemented responsive web interfaces using HTML, CSS, Bootstrap, and JavaScript, ensuring seamless experiences across devices.
- Built scalable and reusable UI components with React, utilizing component-based architecture, state management (Redux, Context API), and hooks for optimized performance.
- Developed web interfaces and business logic using Angular 14/16, ensuring smooth interaction with backend financial services.
- Enhanced backend performance using Java 8/11/16 features, including Stream API, Lambda expressions, and Concurrency API, improving code efficiency and readability.
- Developed RESTful APIs using Spring Boot, enabling secure and efficient communication between frontend and backend services.
- Integrated MS SQL and Oracle databases with Spring Data JPA and Hibernate, optimizing data retrieval, transaction management, and performance.
- Designed and implemented role-based access control (RBAC) and OAuth2 authentication using Spring Security, ensuring compliance with banking security standards.
- Implemented asynchronous messaging using Kafka and JMS, improving system reliability and real-time data processing.
- Deployed and managed applications on AWS EC2 and utilized AWS Lambda for running microservices in a serverless architecture.
- Designed optimized database schemas and developed complex SQL queries, stored procedures, triggers, and packages in Oracle and MS SQL to enhance performance and data integrity.
- Integrated GraphQL with Spring Boot, enabling optimized data querying and improving API efficiency.
- Automated build, testing, and deployment processes using Jenkins, implementing CI/CD pipelines for faster and more reliable releases.
- Improved system scalability and availability by implementing clustering and load balancing in J2EE application servers.
- Utilized Git for version control, collaborating in a team environment with code reviews, pull requests, and branch management.
- Developed and enhanced real-time interactive UI elements using JavaScript, ensuring dynamic content updates and complex form validation.
- Utilized Spring Boot's externalized configuration and profiles for seamless deployment and efficient environment management.
- Used IDEs such as IntelliJ IDEA, Eclipse, and Spring Tool Suite (STS) to enhance productivity with debugging, refactoring, and plugin integration.

Tenet Healthcare, Dallas, TX
Full Stack Java Developer

April 2019 - January 2023

Responsibilities:

- Developed and enhanced the Electronic Health Record (EHR) system, optimizing patient registration, scheduling, clinical documentation, medication tracking, diagnoses, and treatment plans for streamlined healthcare operations.
- Ensured secure and compliant data exchange between the EHR system, healthcare providers, labs, and pharmacies by adhering to HL7 and FHIR standards for interoperability.

- Built dynamic and responsive web applications using Angular 8/10, creating an intuitive UI for healthcare professionals to access patient histories, prescriptions, and lab results efficiently.
- Designed and implemented scalable and reusable front-end components using React, leveraging component-based architecture, state management (Redux, Context API), and hooks for improved UI performance.
- Developed user-friendly interfaces with HTML, CSS, Bootstrap, JavaScript, and TypeScript, ensuring accessibility and a seamless experience across devices, including mobile.
- Designed and optimized database schemas in PostgreSQL, MongoDB, MS SQL, and Oracle, ensuring data integrity, performance, and efficient storage of patient records.
- Developed and maintained microservices-based RESTful APIs using Spring Boot, ensuring seamless integration, real-time data access, and interoperability across hospital departments.
- Migrated legacy J2EE-based architectures to a modern microservices-driven architecture, improving system performance, maintainability, and scalability.
- Architected and implemented Kafka-based data streaming solutions, enabling high-throughput, real-time data processing for patient monitoring and analytics.
- Optimized backend development using Java 8/11 features, including Stream API, Lambda expressions, and Concurrency API, enhancing code efficiency and readability.
- Developed and fine-tuned RESTful services with Spring Boot and Spring MVC, optimizing response times for low-latency communication between the frontend and backend.
- Integrated Spring, JSP, Servlets, JavaBeans, and Spring JDBC to facilitate seamless patient data management and business logic execution within the EHR system.
- Enhanced unit and integration testing using JUnit, Mockito, and TestNG, ensuring code reliability, stability, and HIPAA compliance.
- Integrated Kafka Connect with multiple data sources (relational databases, NoSQL stores, and cloud services), enabling real-time and batch data ingestion.
- Optimized Angular-based applications for mobile performance, improving JavaScript code for touch event handling and responsive design.
- Tuned and configured Spring Boot applications for scalability and high availability, implementing caching, load balancing, and performance optimizations.
- Integrated Angular applications with RESTful APIs, providing real-time patient data visualization and analytics to support clinical decision-making.
- Implemented Java Message Service (JMS) for asynchronous messaging, improving inter-service communication and system reliability.
- Secured RESTful APIs using OAuth2, JWT, and Spring Security, ensuring HIPAA-compliant authentication and authorization for healthcare providers and staff.
- Designed role-based access control (RBAC) with OAuth2, ensuring granular user permissions and safeguarding sensitive medical data.
- Leveraged AWS services (EC2, S3, RDS, Lambda) to deploy cloud-hosted EHR solutions, ensuring scalability, availability, and disaster recovery readiness.
- Integrated Redis caching to optimize GraphQL query performance, reducing latency for frequently accessed patient records and clinical trial data.
- Built and deployed CI/CD pipelines using Jenkins, automating testing, builds, and deployments for efficient release cycles.
- Containerized Spring Boot microservices with Docker and deployed them on AWS ECS, optimizing resource allocation and infrastructure scalability.

MetLife, New York, NY

June 2017- March 2019

Java Developer

Responsibilities:

- Developed internal financial tools and dashboards for financial advisors, enabling efficient management of client portfolios, data analysis, and strategy proposals.
- Designed and built responsive, user-friendly web applications using HTML5, CSS3, JavaScript (ES6+), and Bootstrap, ensuring cross-browser compatibility and intuitive user experience.

- Developed scalable and maintainable Single Page Applications (SPAs) using Angular, leveraging components, services, and modules for seamless user interactions.
- Implemented Reactive Forms and Template-driven Forms in Angular to ensure robust form validation, data consistency, and user input integrity.
- Developed and integrated Kotlin-based microservices for in-app communication (email and SMS), enhancing customer engagement.
- Designed and built RESTful APIs using Spring Boot, facilitating secure data management and integration with third-party financial services.
- Implemented SOAP and REST web services for secure and reliable large-scale data transmission.
- Architected and maintained Kafka clusters with Zookeeper coordination, implementing producer and consumer applications to process real-time financial data streams.
- Developed custom Kafka consumers to handle high-volume data streams and integrate with legacy systems for backward compatibility.
- Partnered with front-end teams to define REST API specifications, supporting key features such as mobile check deposits and financial tracking tools.
- Built and optimized persistence layers using Hibernate ORM with PostgreSQL and MySQL, ensuring efficient database transactions and schema management via Flyway.
- Managed MongoDB databases to store and process unstructured data, ensuring high read/write performance for scalable access to customer information.
- Deployed applications on AWS EC2, leveraging Elastic Load Balancing (ELB), Virtual Private Cloud (VPC), and S3 storage to enhance security and performance.
- Secured RESTful APIs using Spring Security, OAuth2, and JWT authentication protocols, ensuring data confidentiality and compliance with financial regulations.
- Containerized Java applications using Docker, improving portability and deployment efficiency across environments.
- Managed Kubernetes clusters to orchestrate containerized applications, ensuring scalability and efficient resource utilization in development, staging, and production.
- Integrated NoSQL databases like MongoDB and Redis for high-performance and scalable data storage.
- Optimized HTML structure and CSS rendering performance, reducing browser reflows and improving load times for enhanced user experience.
- Established Kafka best practices, including schema management, data serialization, and security measures for efficient event-driven architecture.
- Automated CI/CD pipelines using GCP Cloud Build and Jenkins, streamlining build, testing, and deployment workflows.
- Managed project builds and dependencies using Maven, generating WAR, EAR, and JAR files for seamless integration and deployment.
- Performed API testing using Postman, validating endpoint responses, data integrity, and system reliability.
- Utilized JIRA within Agile/Scrum methodologies to track progress, manage tasks, and identify and resolve bugs efficiently.
- Leveraged Git for version control, implementing branching strategies, pull requests, and code reviews on platforms like GitHub and Bitbucket.

EDUCATION DETAILS:

Masters in Computer Science from Fitchburg State University, Fitchburg, MA.
