Programmer/Software Developer

I am a software application developer with nearly 20 years of experience. I have implemented successful software solutions that interoperate across operating system barriers and between old and new technologies. My colleagues often remark upon my ability to "zoom out" in order to find better ways to solve problems. I also have a keen eye for detail, having implemented custom network protocols for the most exacting engineers. I am always looking at the problem from new angles.

Skills

- C++
- QT
- RT Analysis
- Digital Signal Processing
- Agile Development
- Github Actions
- C++/CLI
- C
- Sensors
- Windows Application
- GraphQL
- Kanban
- Unit Testing
- Brownfield development
- C#
- Signal Processing
- Linux Kernel Module
- Data Analysis
- Continuous Improvement
- Build management
- SQL

Experience:

X-RITE, Grand Rapids, MI

June 2012 - September 2025

Software Developer

Developed C# and C++ software to analyze spectral curve readings from our instruments.

- Implemented paint formulation software in use at major hardware and DIY chains
- Used QT to create unified UI between device and desktop
- Captured measurements from spectrophotometers for color matching. This lets us measure light intensity at over 30 separate wavelengths
- Designed user-space libraries to act as common interface used by our software suites and user SDKs. This was part of "eating our own dog food". Our customers appreciated this and it was a point of pride for us
- Led development of offset printing press QA suite used by top brands worldwide
- Spearheaded company-wide migration from subversion to git. The distributed nature of git was essential since many teams were spread between North America and Europe

SENSOR DESIGN GROUP, Houston, TX

January 2009 - June 2012

Software Developer

Led development of custom C and C#-based software used in electromagnetic steel pipe inspection.

- Processed data from analog-to-digital converter in real time
- Utilized bi-directional communication with sensors in industrial setting, including PLC control
- Rendered detailed graphs to show size and location of flaws in material
- Developed module to perform extra processing between sensors and application
- Frequently met with clients to discuss features and design goals
- Implemented multi-threading using best practices to increase performance with no loss to stability

HEWLETT-PACKARD, Houston, TX

May 2008 - January 2009

Diagnostics Software Developer

Worked on a team of software engineers to develop an exhaustive hardware diagnostics application for HP's line of high-end servers. I split my time evenly between the Windows and Linux versions.

- Worked within a large team to deliver critical server testing on time
- Focused on code reusability to mitigate hurdles of coordination within a >10 person team

U.S. DATAWORKS, Houston, TX

February 2007 - May 2008

Application Developer

Maintained an application used by a Federal Reserve Bank branch to manage more than 15 million transactions every year.

E-PIPHANY TECHNOLOGIES, Houston, TX

May 2006 - February 2007

Software Developer

Worked with a short-lived startup that emphasized creativity and "fail fast". Linux kernel module drivers to run on custom hardware.

Academic Projects

Student

SENIOR PROJECT

University of Houston - Downtown

- **Sep. 2003 - May 2006.**
- A Windows application with a graphical user interface using C# and C++/CLI that captures any wireless network traffic within range of the user. Ported an open-source wireless network packet sniffer written in C and rewrote it in .NET using C# and C++/CLI. The original application made extensive use of low-level code, function pointers, and callbacks.

Education

Bachelors of Science in Computer Science

December 2006

University of Houston - Downtown, Houston, TX

Minor in Applied Mathematics
