 Holiday, FL

SUMMARY

Senior software engineer with 9 years of experience, specializing in C#, ASP.NET Core and Cloud Infrastructure. Collaborates with cross-functional teams to analyze requirements, develop strategic plans, and ensure high-quality code delivery.

SKILLS

C#	.NET framework	ASP.NET	ASP.NET MVC	ASP.NET Core	C	C++	Python	JavaScript
TypeScript	React	Angular	Blazor	Node.js	Azure	AWS	MS SQL Server	PostgreSQL
MySQL	LINQ	Entity Framework Core	Dapper	ADO.NET	Docker	Kubernetes	Jira	
Kanban	Apache Kafka	xUnit	NUnit	Microservices	RabbitMQ	Datadog		

EXPERIENCE

- 03/2025 - 10/2025

Remote

Senior Software Developer

CVS Health

 - Developed patient billing and insurance claims processing modules using ASP.NET Core and SQL Server, ensuring compliance with HIPAA PHI handling requirements and secure audit practices across multi-department workflows.
 - Increased claims adjudication throughput by 38% by refactoring workflow orchestration logic, introducing computed indexes, and optimizing stored procedures.
 - Implemented asynchronous claim validation pipelines using Azure Service Bus and worker services, reducing synchronous API blocking overhead and enabling scalable distributed processing.
 - Reduced average API latency from 450ms to 210ms through strategic Redis caching, DTO compression techniques, and query batching.
 - Configured Azure App Service, Azure SQL, Key Vault, App Insights, and Azure AD authentication, ensuring encrypted communication channels and role-based operational access.
- 04/2024 - 02/2025

Sun City Center, FL

Senior Full Stack Developer

American Clinical Solutions

 - Designed and implemented clinical lab ordering workflows and real-time patient result dashboards using ASP.NET Core, React, and Azure App Service infrastructures.
 - Decreased lab result turnaround time by 40% by developing asynchronous order ingestion and result transformation services hosted as Azure Functions triggered via Service Bus queues.
 - Implemented distributed service health monitoring for patient care applications, incorporating database, HL7/FHIR service endpoints, and insurance eligibility systems to ensure real-time clinical system reliability and uptime.
 - Integrated HL7 and FHIR interoperability layers to maintain synchronized patient data between laboratories, EMR systems, and third-party clinical partners.
 - Established Azure DevOps CI/CD pipelines that automated build validation, environment configuration, deployment approvals, and rollback safety controls, shortening release cycles from 2 weeks to 3 days.

EXPERIENCE

01/2019 - 02/2024

Tampa, FL

Software Engineer II

Sourcetoad

- Led the development of distributed microservices using ASP.NET Core 6, supporting healthcare customer platforms handling patient onboarding, recurring billing, eligibility verification, and automated renewal cycles across multiple business clients.
- Transformed a monolithic healthcare enrollment platform into a modular microservices architecture using Azure App Service, Service Bus, and containerized workloads, reducing deployment downtime and scaling limits by over 50%.
- Implemented Application Insights distributed tracing, structured logging, correlation IDs, and telemetry dashboards, which reduced mean time to identify production issues by 45% and enabled data-driven defect resolution.
- Designed and executed integration, regression, and contract testing pipelines, which decreased production-breaking changes by 25% and significantly improved overall release stability across multiple tenant environments.
- Led code review initiatives, performed architectural planning sessions, and mentored junior engineers, resulting in improved team code quality, faster onboarding, and measurable alignment to DDD and SOLID design principles.
- Collaborated with product stakeholders and healthcare operations teams to convert clinical workflow requirements into maintainable, scalable service designs that improved system adoption rates and reduced manual administrative overhead.

01/2018 - 12/2018

Tampa, FL

Junior Software Engineer

Phonism

- Enhanced internal provisioning and configuration management applications using C#, ASP.NET MVC, and SQL Server, ensuring compatibility across multiple telephony device vendors and enterprise integration environments.

08/2016 - 12/2017

Tampa, FL

Software Engineer Intern

Phonism

- Developed internal tooling and small enhancements to core application services using C# and SQL Server, while supporting debugging, testing, and feature maintenance tasks.

EDUCATION

08/2013 - 12/2017

Tampa, FL

Bachelor of Science, Computer Engineering

University of South Florida

TRAINING / COURSES

Parallel and Distributed Systems

University of South Florida

Embedded Systems

University of South Florida
