

# Nikhil R

## Full stack java Developer

+1 (858) 215-3435 | nikhilr.developer@gmail.com

### Professional Summary:

- Senior Full Stack Developer with over 8 years of experience in designing and developing scalable, secure, and user-centric web applications across banking, e-commerce, and utility domains.
- Proficient in Java, Spring Boot, Angular, and React with hands-on expertise in microservices architecture, RESTful APIs, GraphQL, and real-time messaging systems like Kafka and RabbitMQ.
- Experienced in deploying and managing containerized applications using Docker and Kubernetes on cloud platforms including AWS and GCP.
- Strong background in database design, optimization, and performance tuning with MySQL, PostgreSQL, and MongoDB.
- Skilled in implementing CI/CD pipelines and Infrastructure-as-Code using Jenkins, GitHub Actions, and Terraform to accelerate development workflows.
- Passionate about Agile development, clean code principles, and delivering high-quality software through collaboration and continuous improvement.

### Technical Skills:

|                                              |                                                                                                                                                            |
|----------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Programming Languages</b>                 | Java 7,8, Java 11, C,C++, Java Script (ES-9), Typescript, Python, SQL,PL/SQL.                                                                              |
| <b>Web Technologies</b>                      | HTML5, CSS3, JavaScript, Bootstrap, AJAX, jQuery, JSON, Angular, ReactJS, Material UI, Redux, Flex, ES6, Express.js, NodeJS, GitHub, TypeScript, ES5, ES6. |
| <b>API's</b>                                 | Restful web services, Soap web Services, Graph QL and Web Socket, OAuth2                                                                                   |
| <b>Development tools</b>                     | Visual Studio Code, Brackets, Atom, Eclipse, Web Matrix, Web Storm, Sublime, Dreamweaver, and Notepad++.                                                   |
| <b>Debugging tools</b>                       | Firebug, Bugzilla, Chrome Developer Tools, IntelliJ.                                                                                                       |
| <b>Frameworks</b>                            | Spring Boot, Spring Data JPA, Spring Cloud, Spring Web Flux and Spring Security, Spring Kafka, Spring Batch and ExpressJS with NodeJS, React JS.           |
| <b>Methodologies:</b>                        | Agile (Scrum), UML Waterfall.                                                                                                                              |
| <b>Messaging Platforms</b>                   | Kafka, RabbitMQ and IBM MQ.                                                                                                                                |
| <b>Database</b>                              | MySQL, MSSQL, MongoDB, PostgreSQL, Spunk data storage (Big data), Cassandra DB, Oracle, SQL Server.                                                        |
| <b>Servers</b>                               | Apache Tomcat, HTTP Web Strom, Visual Studio, Atom and Notepad.                                                                                            |
| <b>Containers</b>                            | Docker and Kubernetes with AWS EKS, GCP.                                                                                                                   |
| <b>Testing Tools and Logging Frame Works</b> | Junit3.8/4.0, Jasmine, Jest, Enzyme, Shallow and React testing Library, Selenium Web Driver and Spring Boot Integration Testing.                           |

### Professional Experience:

**Client:** BigCommerce, Frisco, Tx  
**Senior Full Stack Developer**

**Apr 20243 - Present**

- Developed a scalable e-commerce platform using Java, Spring Boot, and Angular, resulting in a 35% improvement in transaction processing speed and enhanced user experience.

- Architected a microservices-based system, implementing Spring Cloud to enhance modularity, reduce dependencies, and improve system resiliency, reducing deployment failures by 50%.
- Integrated AWS Lambda & API Gateway to build serverless functions, reducing infrastructure overhead and cutting operational costs by 30%.
- Optimized API performance by leveraging Redis caching, reducing average response time from 2 seconds to 300ms, significantly improving system responsiveness.
- Designed and secured RESTful APIs with OAuth2 and JWT authentication, ensuring data security compliance with OWASP standards and regulatory guidelines.
- Led a team of 5 developers, conducting code reviews, sprint planning, and mentorship programs, resulting in a 20% improvement in overall development efficiency.
- Implemented containerization using Docker and Kubernetes, orchestrated deployments via Helm, and optimized CI/CD workflows, increasing deployment speed and reducing downtime by 60%.
- Designed and built an event-driven system using Kafka, enabling real-time customer order processing, improving operational efficiency.
- Developed GraphQL APIs to enable efficient data querying, reducing over-fetching and improving frontend performance by 40%.
- Automated testing processes by writing unit and integration tests using JUnit, Mockito, and Cypress, achieving 95% test coverage and reducing production bugs.
- Integrated third-party payment gateways (Stripe, PayPal) to enable secure transactions, increasing revenue and improving customer experience.
- Conducted performance testing using JMeter, optimizing the system to handle peak traffic and ensuring 99.9% system uptime.

**Client: Discover, Riverwoods, IL**

**Jan 2021 – Mar 2023**

#### **Java Full Stack Developer**

- Developed a secure banking portal using Java, Spring Boot, and Angular, implementing optimized transaction workflows, reducing processing time by 40%.
- Implemented multi-factor authentication (MFA) using OAuth 2.0 and JWT, ensuring a 99.9% secure user authentication rate and mitigating unauthorized access.
- Designed and implemented Role-Based Access Control (RBAC), ensuring users had appropriate permissions while maintaining system security and data privacy.
- Integrated Kafka-based real-time monitoring and alerting system, reducing fraud detection time by 35% through event-driven data pipelines.
- Optimized SQL queries and database indexing strategies, reducing query execution time by 50% and improving application response time.
- Automated CI/CD pipelines using Jenkins, GitHub Actions, reducing deployment time from 3 hours to 45 minutes and minimizing deployment failures.
- Developed dynamic React-based dashboards for bank executives, providing real-time analytics and insights to enhance decision-making.
- Implemented Infrastructure-as-Code (IaC) using Terraform, streamlining cloud provisioning and reducing infrastructure setup time by 40%.
- Enhanced system resilience by designing Spring Batch jobs for scheduled transaction reconciliation, ensuring data consistency across services.
- Conducted load testing using JMeter, identifying and eliminating performance bottlenecks, ensuring the system handled 500,000+ concurrent users.
- Secured APIs with OAuth2 scopes, JWT token expiration policies, and CORS configurations, preventing unauthorized API access and improving compliance.
- Optimized frontend performance by implementing lazy loading, caching mechanisms, and state management techniques in Angular, improving page load speeds by 45%.
- Developed automated end-to-end test scripts using Cypress and Selenium, reducing manual testing efforts and improving software reliability.

**Client: AES Ohio – Bengaluru, Karnataka**

**Jul 2017 – Dec 2020**

#### **Full Stack Java Developer**

- Designed and developed enterprise applications using Java, Angular, and Spring Boot, serving 500,000+ users with high

availability.

- Built RESTful APIs, leveraging Spring Boot and Hibernate, reducing client-server communication overhead and improving response time by 40%.
- Automated software deployment pipelines using Jenkins, Docker, and Kubernetes, improving deployment efficiency by 70% and reducing downtime.
- Implemented Redis caching, database connection pooling, and API rate limiting, resulting in a 60% reduction in API response time.
- Developed GraphQL APIs for efficient data retrieval, reducing query overhead and improving database performance by 35%.
- Secured applications by implementing OAuth2, Single Sign-On (SSO), and JWT authentication, enhancing access control and reducing security risks.
- Designed a WebSocket-based real-time notification system for high-frequency trading platforms, ensuring low-latency data delivery.
- Conducted comprehensive unit and integration testing using JUnit and Selenium, achieving 90%+ test coverage and reducing post-production bugs.
- Implemented Kafka-based event-driven architecture, enabling asynchronous processing and reducing system lag by 50%.
- Led Agile ceremonies, including stand-ups, sprint planning, and retrospectives, ensuring projects were delivered on time with high quality.
- Refactored monolithic applications into microservices-based architectures, improving maintainability and scalability.
- Developed and deployed containerized microservices using Docker and Kubernetes, ensuring scalability across cloud environments.

**Client: CodeVista solutions – Hyderabad, India**

**May 2016 – jun 2017**

#### **Junior Java Developer**

- Supported the development of an internal HR management tool using Java, JSP, and Servlets as part of a 5-member backend team.
- Designed dynamic UI screens with HTML, CSS, JavaScript, and Bootstrap to improve employee data access and reporting modules.
- Collaborated with senior engineers to integrate RESTful services for employee onboarding and time tracking.
- Wrote SQL queries and assisted in schema changes in MySQL for backend validation and user data management.
- Participated in sprint planning, code reviews, and defect triage, gaining Agile development experience.
- Used Git for version control and JIRA to track tasks, and performed unit testing using JUnit.

#### **Education**

Master of Science in Computer Science - University of Dayton
