

MOHAMMAD NOFAL

Wireless Network Engineer

OBJECTIVE

Looking for a technical position in the field of 4G/5G RAN Engineering, to practice theoretical & practical experience I gained in my study & work.

EDUCATION

UNIVERSITY OF NORTH TEXAS

Denton, TX 2022

M.S Electrical Engineering

Relevant Coursework

- Microwave Engineering
- Wireless Communications
- Antenna Theory & Design

MUTAH UNIVERSITY

Karak, Jordan

Bachelor of Science (B.S.) Electrical Engineering

CONTACT

PHONE:

469-996-7608
Plano, TX 75024

CERTIFICATIONS

SAMSUNG Product Certification
Jordanian engineers' association
Saudi Council of Engineers
5G Association program Bell labs Nokia Training.

WORK EXPERIENCE

SAMSUNG, America 4G/5G RAN Tier-2 Engineer

Jan 2023 – Aug, 26 2024

- Verizon FOA Project: vDU, AU, IAU, vCU. 5G, CDU30-50 RAN Engineer.
- Perform advanced troubleshooting and analysis of customer data.
- Analyze network events and performs root cause analysis to prevent similar impairments/outages in the future.
- Manage escalation processes as needed. Engaging and escalating issues with the Network Surveillance.
- Develop Root Cause Analysis (RCA) on outages or market performance issues (e.g., throughput, accessibility, sustainability, handovers (Intra/X2/S1), capacity and coverage).
- Reviewing network logs to discern state changes of network equipment.
- proactively perform data audit, SW/FW audit, and health check of the OSS if needed .
- Provide in-depth technical log analysis, check network configuration, and support customer as needed for LTE/5G/O-RAN & Virtual RAN.
- Execute test cases to verify resolutions, enhancement & new features which presented in SW release notes for 5G SA/NSA, VoNR & LTE.
- Verify/Testing resolutions, enhancement & new features on 5G NR virtual RAN HP/ZT blades with Windriver OS, K8s & Samsung Application

Nokia Networks, SA Mar 2011 - Aug 2021

TECHNICAL ASSISTANCE (TAC) TEAM LEAD

Mar 2020 - Aug 2021

- Software Update & Patch management, perform frequent SW updates for different nodes in the network, like: BSCs, RNCs, 2G, 3G, 4G, 5G, Megaplexer, Megamon.
- Impact analysis & roll back plan preparation for network activities, .

- Perform corrective maintenance for various RAN nodes alarms & failures & managing the corrective & preventive maintenance (CMR/PMR) operations on customer network using RTTS.
- Conducting deep dive customer sessions for 4G/5G Call processing related features, introducing new technologies.
- Execute NSA 4G/5G new test cases for 3GPP features Release 14 and beyond.
- Analyze & troubleshoot network performance issues (Air interface, Scheduler, L2/L3 call processing) by analyzing collected UE and eNB/gNB logs.
- Open technical cases with care team for troubles that can't be handled by back office.
- Perform Health checks, disaster recovery & Prepare contingency plans.
- Technical support Field teams in site integration, configuration & TS.
- Radio Network Commissioning and Integration of 5G/4G(LTE) Flexi BTS / Aircscale.
- NETACT/NMS system upgrade & maintenance.

TECHNICAL TEAM LEADER

May 2016 - Mar 2020

- Managed Services 34 Months Project Saudi Telecom Co
- Responsible of providing technical support to operation & maintenance teams (1st/2nd line maintenance) to provide solutions for technical problems, examples of responsibilities including:
- Perform gNB/eNB validation, feature verification, mainly related to Air interface, key performance, and Call Processing.
- Analyzing customer escalation cases related to site degraded KPIs.
- Hajj/Ramadan project 24/7 technical support (Sub-project of MS34, managing huge ramp up of traffic in Makkah/Madinah cities.
- Conducting deep dive customer sessions for 4G/5G Call processing related features, introducing new technologies and air interface features.
- Analyze & troubleshoot network performance issues (Air interface, Scheduler, L2/L3 call processing) by analyzing collected UE and eNB/gNB logs.
- Supervise & manage 2nd line maintenance engineers' tasks & provide required technical support for HW/SW of BSC/RNC in coordination with Care team, managing the corrective & preventive maintenance (CMR/PMR) operations on customer network using RTTS.
- Radio Network Commissioning and Integration of 5G/4G(LTE) Flexi BTS / Aircscale.

OPERATIONS REGIONAL MANAGER

Sep 2014 - May 2016

- Managed Services 34 Months Project Saudi Telecom Co
- Southern region, supervising & managing the corrective & preventive maintenance (CMR/PMR) operations on customer network using RTTS.
- Attending customer directors monthly meeting & presenting filed CMR/PMR performance
- Analyzing & justifying SLA (Service Level Agreement) exceeding trouble tickets.
- Preparing & requesting approvals for monthly PODs (Proof of

NETWORK IMPLEMENTATION TEAM LEAD

Mar 2011 - Sep 2014

- STC 42Mbps 3G Expansion Project: Scope of 350 3G sites expansion from 21Mbps to 42Mbps
- STC LTE Trial: Scope of 160sites implemented for a new technology 4G.
- STC-4G1 Project: Scope of 812 sites 2G,3G & LTE new sites, full delivery.
- Responsible of Telecom project implementation, manage & supervise sites telecom equipment installation in terms of scope, solution, design etc.
- Implementation resource planning
- Provides demand plan for implementation teams (Installation, commissioning and integration).

Huawei Ltd, JO SENIOR WIRELESS ENGINEER

Apr 2009 - Feb 2011

- VIVA Bahrain Support Project
- Zain Jordan Swap Project
- Senior wireless engineer performing initial configurations & integration of Huawei Core, wireless telecom products for mobile networks
- Commissioning & Configuration of Huawei BSC6810, BSC6000 & BSC6900
- Software installation & initial configuration of BSCs
- Commissioning & integration of BTS3900 & DBS3900
- Troubleshooting of BSC & BTS
- Configuring & preparing scripts for luCS, luPS, luR & luB interfaces
- Implementing IP routings for RNC/BSC interfaces
- Installing & activating License for RNC, BSC 6900 & NodeB BTS3900
- Upgrading BSC6900 SW file version & Patch version Locally & remotely through M2000
- Opening trouble ticket & collecting logs data for technical support through Icare system.

ADDITIONAL SKILLS

- 2G, 3G, LTE & 5G NR Technologies
- LTE CBRS/NR CBRS O-RAN configuration & Troubleshooting.
- iAU/AU 5G mmWave configuration & Troubleshooting.
- 5G SA/NSA, DSS, IODT & CICD testing.
- Nokia NetAct Airscale/Flexi BTS/ Samsung USM / VRAN/K8s/Cloud
- TEMS Investigation
- Spectrum Analyzer
- 5G/LTE protocol layers
- MIMO Antenna systems
- Managing networks tickets & incidents, Remedy & RTTS system.
